That would be a definite nope. The 5200 carts are way too big to fit
in the XL's little slot. I'm sure there's other reasons as well, but
that one is the most obvious.

The next step is to get a copy of the December '93 Atari Classics and perform the Super Video XE upgrade on your machine. This corrects the output impedance of your video amplifier as well as a few other things. Appearance-wise, it will fix the slightly washed-out look XE displays have. There's also a color calibration utility by Jeff Potter in that issue that I've found very useful.

Ron,
I scanned them both and formatted them in a variety of formats. I sent them both to Bill Kendrick to have them added to the Umich Archive. I'm not sure he's added them or not. I haven't checked. I can e-mail them if you need them. e-mail me for what you need.

Wish I had a BB. I'd find out if Bob would allow the manuals to be
"e-formatted". Anyone with a BB and still has complete manuals, and
willing to convert them to a file could you please contact Bob Puff and
ask for permission to do so? MAnuals for major products like this are
important to have available. Even if only from the original author for a
fee.

Even if in some sense it would possible, I don't think it would
speed ANTIC up. Calculation time slows down with ANTIC because
ANTIC steals CPU cycles; ANTIC always has the priority. Therefore,
if you turned off the CPU (assuming ANTIC can still use the CPU
as it wants) nothing would change because ANTIC would still steal
the same CPU cycles which would be processed at the same speed.

Turning ANTIC off is a help not because the CPU is faster but
because more cycles are available. ANTIC gets all the cycles
it needs with or without a "main program" running.

I finally got around to playing this game after many years of it collecting dust in my disk bin. I remember how 'Big' this game was esp with the Apple folks. I never thought much of it. I popped it in and got to level 23 without much of a sweat. It was fun but not too challenging. I recently picked up Championship Lode Runner and figured I could put a pounding on it as well. Wrong! The FIRST level is almost impossible. I don't think one can master it but hope to have a few things fall ones way to finish the 'Hello'. The second level is no better. I managed to get to level 4 before losing my grip on the game. This is one tough customer. Anyone else have better luck?

Later,
Steve

From: dreibel@idirect.com
Message-ID: <34843183.0@nemo.idirect.com>
Source record: 68197

Agenda for Toronto Atari Federation meeting for December 17th, 1997:

ATARI - THE MIDI CHAMP!

The Atari ST computer, the first on the market with standard MIDI ports and intelligently designed software, became the number one choice of recording studios and home recordists throughout the late eighties and early nineties. And today, despite the encroachment of the PC and Mac in the studio enviroment, many artists still rely on their STs for their projects for their relative ease of use and lower system overhead. This TAF meeting will be of especial interest to MIDI users, as there will be demonstrations of the latest incarnation of E Magic Logic (2.5), perhaps one of the best sequencing programs for the Atari on the planet; as well as a demo of a new arpeggiator program from upstart company Electronic Cow. You'll be amazed at just what an Atari is still capable of!

TORONTO ATARI FEDERATION User Group meetings are held on the Third Wednesday of the Month in the North York Memorial Community Hall on the Lower (or Concourse) Level of the North York City Centre Library at 5110 Yonge St. at Parkhome Ave. Parking garage inside the complex. Those using public transport can take the TTC's Yonge-University-Spadina line to North York Centre Station. Meetings start 7:30 PM, $2.00 to non-members. Membership is $35 CDN a year, and includes a subscription to the club newsletter PHOENIX and full use of the TAF Online BBS. A membership in TAF IS Atari support!

Well I don't know about the 1996 AMS, since I didn't go to that one,
but they had been regular attenders of previous Autumn AMS's. Considering
that AMS is held just outside Stafford (Page 6's home) and used to be
THE Atari 8-bit Show in the UK... Maybe they didn't care much for other
shows, but AMS was the exception. It's the 6th one I've been to, and
the only time I've not seen Page 6 there (and Micro Discount for that
matter). Still as you say NAU is no longer the Ellingham's only
income, maybe they had more pressing concerns. But with stand prices
cheaper than they have been in the past it would have been an
opportunity for them to sell more of their PD disks =)

3921. Re: Info on ATR-8000

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-02 00:00:00 UTC
From: Curt Vendel <cvendel@aol.com>
Message-ID: <348483FD.FEF1BE2F@aol.com>
Source record: 68205

The ATR8000 was a self contained Z-80 computer, however it could be used by an Atari through the SIO connectors allowing an Atari to use its Serial, Parallel and Floppy disk port. The 64K module supported the use of C/PM v2.2 and could use the Atari as a terminal with a special 80 column terminal cartridge. You could also add a daughter card called a Co-Power-88 which would add an Intel 8088 processor and 256K of memory, you could also get up to 512K of memory as well. A third party company (Lurie & Associates I think) made several hard drive interfaces for the ATR8000 as well. The ATR8000 was a "Must Have" item for any Atari owner.

Source record: 68206

Hi Bill,

The 1090XL would have been very nice and there is next to nothing on
the motherboard so duplicating it shouldn't take much effort. However,
the PBI has severe timing problems and a real 1090XL has to use a
shielded cable no longer then 3"s or the system tends to lock up a alot.

Curt

Having one place with lots of documentation and information would be
a great idea. It would be nice if some site could provide access to
these pieces of information with a searchable index.
This made me realize that putting a collection of this type of
information on a CD would be a good alternative to having it on-line.
Or at least a good start. Sure, there are a lot of good magazines
that had various articles with good content. The Megazines for
instance. Since we will be releasing Pooldisk II in the very near
future, I would like to put this type of articles on the CD. At least
you can search the files for a certain text. So everyone is welcome
to send me articles by E-mail, so that we can add them to the CD.
If possible, please include the source of the text, so that we can
avoid copyright infringement. Any editors out there that used to
put together usergroup newsletters are welcome to send me
articles that have been published, as long as we get permission
to put it on the CD.
Send whatever you like to ernest@wxs.nl
Any help is greatly appreciated.

Keep those XL's/XE's humming, Ernest.

It could be the drive is set a drive ID other than D1. (This would be true
if it was previously used with another drive set up as the boot drive.)
There should be some DIP switches in the back for setting the drive ID. I
seem to recall the Atari will only boot from D1 (i.e., drive ID 1).

3928. New A8 Emulators for Amiga/PMac

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-03 00:00:00 UTC
From: Frank-Oliver Malisch <fomasp@mchp.siemens.de>
Message-ID: <664do2$4cv$1@salomon.mchp.siemens.de>
Source record: 68084
Cross-posted to: comp.sys.atari.8bit,comp.emulators.misc,comp.sys.amiga.games

Hi,

I found this in comp.sys.amiga.emulations:

[begin forwarded message]

I just wanted everyone to know that we have decided to release our 8 bit
Atari 400/800/XL/XE and Apple II emulations to the public at no cost. You
can download the emulations from our web site. Look in the AMIGA section
under ACE (Atari Console Emulator) and AII (Apple II Plus emulator):

http://www.ctaz.com/~msdei

These emulations were to be part of the software included with EMPLANT
years ago, but never were.

These emulations are great, and I know that many of you will get a kick
out of being able to play the old classics.

When you visit our web site, you will also notice that we now have
MACINTOSH and PC areas. In the MACINTOSH area we have 'WACKE', which is
a PowerMAC only version of the Atari 400/800/XL/XE emulator. In the PC
area, you will see an announcement and preliminary specs for FUSION...
yes, a MAC emulation for the Intel boxes.

Nobody panic, we are just expanding our product line, not jumping ship.
:-)

Enjoy!

Jim Drew, Microcode Solutions

-------------------==== Posted via Deja News ====-----------------------
http://www.dejanews.com/ Search, Read, Post to Usenet

[end forwarded message]

My question is:

Has anybody already been able to actually run ACE, the A8 emulator
on an Amiga ? On my machine I get an error message 'can't open
emulation/screens' or something like that :-((

From what the manual states ACE seems quite interesting
as it suggests, that the Amiga's custom chip hardware is heavily involved
in the emulation task. The Amiga Chipset expands on some of the ideas already
implemented in the A8. There is hope that this emulator will run faster
than Atari800 by David Firth, which sacrifices speed for portability

at least on underpowered machines like the Amiga (50 Mhz 68030) using
planar graphics. Especially chunky to planar conversion on Atari800
seems to be quite slow compared to Magic64 which has to deal with a
similar problem, but is a lot faster.

Anybody else upgraded the 'Jay Minor Path' from A8 to Amiga ?
Is ACE the same emulator as ACE for the PC ?

Greets

Frank-Oliver

Frank-Oliver Malisch (fomasp@mchp.siemens.de) wrote:
: My question is:
:
: Has anybody already been able to actually run ACE, the A8 emulator
: on an Amiga ? On my machine I get an error message 'can't open
: emulation/screens' or something like that :-((

Yes, I've been running ACE successfully for some time.

This discussion really belongs on comp.sys.amiga.emulations, and has been
redirected there.

: From what the manual states ACE seems quite interesting
: as it suggests, that the Amiga's custom chip hardware is heavily involved
: in the emulation task. The Amiga Chipset expands on some of the ideas already
: implemented in the A8. There is hope that this emulator will run faster
: than Atari800 by David Firth, which sacrifices speed for portability
: at least on underpowered machines like the Amiga (50 Mhz 68030) using
: planar graphics. Especially chunky to planar conversion on Atari800
: seems to be quite slow compared to Magic64 which has to deal with a
: similar problem, but is a lot faster.

I haven't been able to get Atari800 to run with any sort of respectable
speed in previous versions, and the new versions are incompatible with the
latest (v47) ixemul.library, so if it's better I can't tell.

: Is ACE the same emulator as ACE for the PC ?

No.

From: jason@linux.aatech.com
Message-ID: <664j98vut1@news.aatech.com>
Source record: 68087

Has anyone looked at

http://www.infosys.tuwien.ac.at/Staff/lux/marco/lzo.html

and considered porting it to the 8-bit?

It looks like it gives us the benefit of using PCs for better compression
while still allowing the files to be uncompressed on the 8-bit.

I'm not that familiar with what's available as 8-bit development tools, so
I'm not sure how well suited I am for the job.

Anyone up to the challenge, or am I misreading this stuff?

Atari Prototypes & Vaporwares has moved !!!

The new site is now at www.atari.nu

Hundreds of brand new, never before seen images of rare & never released Atari products such as The Atari 600 prototype, the Atari CX-2000 prototype, the Game Brain, the Atari STylus, even several prototypes which are unknown and unclassified. Also there are articles and information from past magazines, newspapers and internal Atari documents.

Plus the addition of Atari Sounds & Movies, featuring this month 3 new AVI's from Alan Alda "Like A Kid", The Atari 7800 Test Lab and The Fun is Back Atari 2600 commercials.

Stop by and check out the new look and all the new information and images at the Atari Prototypes & Vaporware website.

From: bigrex@nospam.primenet.com
Message-ID: <34860b93.24088417@news.primenet.com>
Source record: 68092

Digging deep, as memory serves, I had a demo disk of 'Geos' for the Atari8. After talking to a guy at work that was into C-64's, he informed me that Geos (mouse and all), was a regular OS an the C-64. Why did it never migrate to the Atari Xl. Xe's?
BTW, I bought Geo Works for the PC some years ago but don't have any use for it anymore. Does anyone know if this is the same company that made Geos for the 8bit computers?

I think there was also more 80 column stuff for the C-64. They even had a Y-C cable and monitor. I not being a traitor, I'm just curious about how and why things went down like they did back then as I never bothered with C-64 because at that time, they were considered inferior??

They look like hell. Somewhere I have a hacked version of Lode Runner
from Germany that uses a 4-color mode. Very nice.

You can always use the composite output when you want to use something
that uses artifacting, assuming you have NTSC equipment.

> If artefacting bothered you in Ice-T,why didn't you just turn down
> the colour knob?

Because a split video display is much sharper and easier to read.

What kind of controls does the train normally use? If its just a r
hand type control w/ a variable resistor, you could use a dallas
digital pot attached to the joystick port for a very quick solution.

I think I have the image somewhere, in 2 8k parts. I will have to dig it up.

>On a side note, has
>anyone ever build the ANTIC Eprog (EPROM Programmer/
>Reader?). I built it
>years ago, and just now pulled it out of the closet
>to get it working. It
>doesn't read data from a ROM consistently.
>My next try at getting this thing
>to work is to erase the EPROM and
>read it again. Anyone have success with
>this?

I built one, and it turned out to be a lifesaver. On more than
one occasion I have used it to burn new EPROMs to replace
blown ROMs. I also used it to burn a new EPROM for the
XF551 3.5" upgrade from Bob Woolley's article.

Which computer are you using it with? Nobody seems to
know why, but the Antic Eprog only works with the old 800's.
It will get the inconsistent results with the XL's, and it won't
work at all with the XE's.

Also, did you add the modification to read 16k EPROMs in
8k banks? If memory serves, it was in the April '86 issue,
in (I think) the I/O Board column.

One good test for the Eprog is to read an EPROM which has
been erased. It should read all $FF's.

Good luck with it.

That doesn't make any sense.How can it not download? (it'd be pretty useless if it couldn't)

And I thought that WebTV just did HTTP.I don't even think that you can reach gopher or FTP sites.After reading their web site it seems that WebTV is kind've a gypp.Not even telnet! At least with telnet you could log in to a UNIX system to use all the features that WebTV left out.(which is just about every protocol there is but HTTP,POP3 and SMTP)
Correct me if this has changed.
I'll stick with Linux.(I'm using TIN right now)

At least with the Netlink you can play games over the (preferably local) phone lines.And I still think that it's stupid that Sega didn't incorparate TCP/IP into the games.And as for choosing IRC over telnet...

Who told you that all PCs could do was "www & mail"?
("downloading" is what HTTP is for!)
I smell more WebTV brain-washing!

> It would really be cool if I could tie the 2 together - graphic surfing
> and downloading at the same time.
> The Web TV box plugs directly into the TV as does my XE. Anyone think
> it might be possible to develop a common interface?

I can't stand using a TV for computers.How do you see the entire picture?

As for the atari's usefulness,you could view the GIF files you downloaded.Try JVIEW.And there are Amiga tracker module (MOD.) players.
(check the FAQ)

> ken at ntalr dot aatech dot com

Kenneth,
The Atari Touch Tablet stylus is simply a plastic, somewhat piynted
(pencil like) stick with a normally open, single pole single throw,
momentary contact micro switch in it. This switch is simply wired to a
2-pole mini plug. Polarity doesn't matter.
The horizontal pad readings are read from paddle(0) values 0 to 228 and
the vertical readings are from paddle(1) vlaues 0 to 228. The left
button on the unit is ptrig(0) not pushed=0 pushed=1, the right putton
on the unit is stick(0). Not pushed=15 pushed=7. The stylus button is

also stick(0) not pushed=15 and pushed=14. Ther are other values
depending on combinations of the 3 buttons being pushed together, but I
don't have them handy at the moment.

As for why they stopped the original stylus is beyond me.

Came across a 130XE at a thrift but no power supply :(Would really
like to see if it works and if so to start learning some progrming etc.
Does anyone have an extra power supply they would be willing to give up
for minnimal $$$ (since I don't know if the thing even works)?

Thanks

I remember there being a Compute Book with the Basic Source Code available
does anyone have this book and if so would ya be willing to part with it???
thanks...

3954. UK 8 bit owners want to swap progs?

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-03 00:00:00 UTC
From: Gareth Davies <xrb56@dial.pipex.com>
Message-ID: <3485ADA0.34F6ABB0@dial.pipex.com>
Source record: 68225

All the posts of games for sale seem to be US. Not surprising really since that's where they were most popular but anyone in the UK want to swap/sell carts or disks - "pirates" or originals?

Gareth Davies.

3955. Remeber AtariSoft?

Newsgroup: comp.sys.atari.8bit

Message-ID: <3485AE38.9C3B75FC@dial.pipex.com>
Source record: 68226

Just looked through an old mag and saw AtariSoft advertising games for the C64 and Spectrum but not for the Atari 8 bits. I remember this struck me as odd at the time. Did they ever produce Atari 8 bit games?

Gareth Davies.

They were the same games that the Atari already had! I don't think anything was made by Atarisoft for the Atari, but Atari Corp. released them on cartridges mainly for the Atari. Datasoft also made disk/tape versions of several of the same games (Pole Position, Pac-Man, Dig Dug) Take Atarian care. BTW Atari versions were much better than the C64 versions

ATTN: EVERYONE

I am on an endless search for the game ALTERNATE REALITY for the atari 800xl. I believe that the original game is on floppy disks. If anyone out there has this and would like to sell it to me, price is always negotiable. PLEASE, my brother really would like this as a christmas gift.

Email me a.s.a.p. with any information or sale offers.

Thanks a bunch!!!

Erica Henning

you can email me at the following address: henning@sg1.hep.fsu.edu

3959. Information Needed On Joystick Ports

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-03 00:00:00 UTC
From: Emlyn Lang <emlynlang@tinet.ie>
Message-ID: <01bd0028$0feb1b80$45e9869f@emlynlang>
Source record: 68230

I'm currently trying to find out information on the joystick port of a 130
XE

I can remember reading once that the joystick port could be used to send an
output(I think it was 0V- and a number of 5V+ outputs)
The output could be controlled by poking specific address.

I would be very grateful if someone could give me some help.

Thanks a lot.

Scobby

I guess I didn't define "downloading" with my Web TV. What I meant is that I can't save a page or file to disk (although it can be saved to a printer). I CAN access the ftp sites - I do this on a regular basis, see which files I am interested in, and then switch to my Atari and download the files to disk via Delphi.

I hope this clarifies matters.

: be wrong on that) It was played with a joystick or either Touch Tablet or
: Koala Pad. The game worked best with the latter and was quite fast!

don't know if this is common knowledge, or if for that matter anybody'd be
interested, but the touch tablet uses the same thing-whatever its called-
as the paddles. . .in basic i think it was paddle(0) and paddle(1), as well
as ptrig(0) and ptrig(1). . .it used one paddle for horizontal and one for
vertical (returning as always for atari 0-255-2^8). . .i messed around with
it as a kid. . .that's all

3963. Followup to 'can someone be filtered from usenet'

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-04 00:00:00 UTC
From: cb541@cleveland.Freenet.Edu
Message-ID: <665dkk$p4h@alexander.INS.CWRU.Edu>
Source record: 68098

Thanks to the people who responded, both in this group and in e-mail about my question regarding being 'filtered' from usenet.

I can't followup to my message about 'possible to 'filter' someone from usenet. Because all my followups fail to appear in CFN. I could not/can not see the Re:xxx followups to my messages, ie. I cannot see any threads I join or start from CFN. I searched www.dejanews.com, which a couple people suggested I look at. It seems I've been not only not been seeing any followups to either original posts or followups to my followups, but this has been going on for years (I had 240 posts and followups in dejanews, many I'd never seen before.)

This certainly explains a lot. What I mean is, there is a LOT missing from what I can see, and I suspect a great deal of usenet doesn't see what I say. As to whether it has to do with CFN, one person said the only thing to do was use another service, I don't know. For some time, I felt that my stuff was getting 'lost' somewhere. My visit to dejanews proved that. Also possible is that one can be 'filtered' from usenet.

My conclusion at this point. The absence of any way to followup to other people's posts, and to see other people's followups to my posts makes comp.sys.atari.8bit sorta useless except to read it and send e-mail to people who's messages I read. I have no idea the source of the 'lost' articles, but at least now I know why it never seemed that people followed up to my posts, and people might understand why their followups to my posts are never posted back to.

3965. Auction: 8-Bit Games/Disks/Printer/Cable/Dealer Demo/Track and Fld Ctrlr

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-04 00:00:00 UTC
From: classicauc@aol.com
Message-ID: <19971204125500.HAA15509@ladder01.news.aol.com>
Source record: 68100

December Auction - Update 7

Auction Rules:

-In case of ties, the first bid received is the bid accepted.

-Auction will continue through Monday, December 15, 10:00pm central time. After that date, bidding will continue on any items which have received a bid within the last 24 hours. Anyone may bid on an item that is still receiving bids. Minimum bid increment may be increased after the auction deadline.

At the deadline, items will be marked sold immediately if they had no bids in the last 24 hours. For
example, a cartridge that received a bid at the beginning of the action will be marked sold at the deadline
unless a higher bid is received within 24 hours before the deadline.

-Not accepting trades at this time.

-If you bid, you are expected to buy. Payment is by check or money order in U.S. Funds. No CODs. Allow 10 business days for checks to clear.

-If you have a U.S. address (except Alaska or Hawaii), total shipping and handling is $3.95 for any number of cartridges/manuals/magazines; $6.95 if package includes systems, modules, hardware, or more than 2 books. I'll pay any difference. Some items require actual shipping, if stated.

-Place a bid by item number and description. Your first bid must include your name, address, and phone.
If you would like to remain anonymous, please include a substitute name with each bid.

-Minimum starting bids are listed. Minimum bid increment is .50 on items under $3, $1 on items $3-
$9.99, $2 for items $10-29.99, and $5 for all others.

-Instructions and box are only included if stated. New in box is new, but not necessarily sealed. Complete
in box contains instructions and is used.

-Send all bids to ClassicAuc@aol.com.

Atari 8-Bit Computer Accessories
A1. Panasonic KX-P1092 Epson Compatible Dot Matrix Printer. Includes 2 ribbons (installed and extra unopened)/Operating Instructions manual (includes codes, charts, type-in BASIC examples). Without paper separator (wire rack). Supports near letter quality print. Handles friction feed or fan-fold paper. Very nice condition. Works well with Atari 850 Interface. Actual shipping added. -$19.95

semslie

A2. Atari 850 to Centronics Printer Cable. Works with above and other dot matrix printers. -$8.95 semslie

A3. Atari Dealer Demo Cartridge. 16K Dealer Demo in Centipede Case. Self-running. Shows advanced capabilities. Well executed programming tricks. Begins with multicolor Atari Logo with all colors displayed at once. Includes Household management, Recordkeeping (animated pencil), Home Entertainment (shows Star Raiders with different style tie-fighter), Investment Analysis, and Service Centers (draws U.S. map). Extremely rare. -$35 grabben

A4. AtariWriter Cartridge. Includes 50 page spiral bound manual, Quick Reference Card, and Helpful Hints fold-out card. -$7.95 min

A5. Atari Assembler Editor Cartridge CXL4003. With 79 page User's Manual and Programmer's Reference Card. -$8.95 min

A5a. Koala Pad. Includes Koala Pad touch tablet, stylus, Micro Illustrator and Touch Tablet Owners Manual. Very Rare. No Disks. -$8.95 min

A13. Flight Simulator II (XE game system style) -$2.50 steg
A14. Millipede (computer style) -$2.50 disk doctor
A14a. Kindercomp cartridge. -$2.50 min
A14b. Centipede cartridge -$2.50 min

Atari 8-Bit Computer/XE Game System Cartridges
(New in boxes with instructions - not sealed)
A15. Star Raiders II -$5.95 min
A16. Battlezone -$5.95 min
A17. Ballblazer -$5.95 min
A18. Rescue on Fractalus! -$5.95 steg
A19. Desert Falcon -$5.95 min
A20. Thunderfox -$5.95 min

Atari 8-Bit Computer - Disks
A21. Pogo Joe (flip side for C64) disk -$1 min
A22. HomePak (flip side for C64), Batteries Included disk -$1 min
A23. Ken Uston's Professional Blackjack (flip side for C-64) with Operating Instructions manual. -$1.25 min
A24. Party Quiz Question Disk (General Edition 1), Suncom. Flip side for C-64. -$1 min
A25. F-15 Strike Eagle, Micropose disk -$1 min
A26. Blade of Blackpoole, Sirius disk -$1 min

A27. Twerps, Sirius disk -$1 min
A28. Spy vs. Spy and Spy vs. Spy II (Island Caper). Disk with Instructions. -$2.95 min
A29. Boulder Dash, First Star disk -$1.95 min
A30. Gruds in Space, Sirius disk -$1 min
A31. Repton, Sirius disk -$1 min
A32. Ali Baba and the Forty Thieves -$2 Joseph Red
A33. Murder on the Zinderneuf, Electronic Arts. Complete in package with disk and instructions/reference card. -$2.95 min
A34. Nudmehi Replica 1+1 Backup and Utilities Program. Designed to back up all Atari software prior to 8/15/82. Includes Sector Disassembler, Sector Search, Disk Bitmap, RPM Speed Adjustment. Support for optional data disks (not included). Disk and Instructions. -$2.50 Joseph Red
A35. CASDIS. Machine language program that converts Atari cassette-based programs to disk. Supports BASIC, machine language, and multi-load programs. With 28 page instruction manual. -$1.25 semslie
A36. Print Shop Graphics Library 3 with Reference Card. -$1.25 min
A37. Atari Word Processor Program Master Diskette -$1.95 min
A38. APX Insomnia Sound Editor with instructions -$1.95 min
A39. Ultima II Disk 2 Player Disk -$.25 min
A40. S.A.M. Software Automatic Mouth Disk, Don't Ask Computer Software -$1 min
A40a. Track Attack disk, Broderbund -$1 min
A40b. Hacker disk, Activision -$1 min
A40c. Drol disk, Broderbund -$1 min
A40d. Spy Hunter disk, Sega -$1 min
A40e. Master of the Lamps disk, Activision -$1 min
A40f The Great American Cross Country Road Race, Activision -$1 min
A40g. Maxi Golf, Activision 2 disk set -$1.50 min
A40h. Mr Do! Disk. Atari Computers one side/Commodore 64 flip side. -$1 min

Atari Controllers
A41. Light Gun. Works with XE system and 8-bit computers. Use with Barnyard Blaster (above). -$6 TheMaverick
A42. Track and Field Controller (Blue with 3 buttons - 2 Run and 1 Jump/Throw). Works with 2600 and 8-bit Track and Field games. Very rare. -$12.95 disk doctor
A43. Standard Atari Paddle Controllers (pair) -$2.95 min
A44. Atari Standard Joystick (single) -$4 ebacher
A45. Atari Standard Joystick (single) -$4 ebacher
A46 Epyx 500XJ Joystick with Autofire -$3.95 disk doctor
A47. TAC-2 Joystick -$5 ebacher

Miscellaneous
A48. Flip and File - Clear smoke colored plastic. Holds 10 8-bit or XE cartridges (elephant disk sticker on front). -$1.95 disk doctor
A49. Flip and File - Same as above, except holds 5 1/4 floppy disks (elephant disk sticker on front). -$1.95 min
A50. Flip and File - Same as above, except holds 5 1/4 floppy disks (elephant disk sticker on front). -$1.95 min
A51. BCs Quest for Tires Poster. Approximately 17x23.5 inches. $.50 min
A52. Millipede (8-bit) box (crushed). $.25 min
A53. Atari Enamel Olympic Pin (see picture in Summer 84 Atari Connection)

-$2.95 grabben
A53a. Super Nintendo Mortal Kombat II Instructions -$.25 min
A53b. Colecovision French labels for Front Line. Excellent, like-new condition. -$.25 min

Books/Instructions
A54. Inside Atari BASIC. BASIC programming book. Key concepts (full of type-in examples). Fundamentals of Atari Graphics. GTIA Graphics, Game Controllers. 183 pages. -$2.95 semslie

Tom and Martin,
If you have an 850 or similar interface and terminal program, you could
use a null modem cable to transfer the files. This would be sorta like
calling a BBS to d/l the files. I do this often and it works great. It's
not fast, but effective.

Emlyn,
First POKE 54018,56 to set the port to output, then POKE
54016,databyte. More detailed info is available in "Mapping The Atari"
and "Your Atari Comes Alive" project book. Both are available from B&C
ComputerVisions at www.myatari.com.

3968. Reinhard's Rarities Auction 12-03-97

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-04 00:00:00 UTC
From: rpribish@wheel.dcn.davis.ca.us
Message-ID: <666ck1$230$3@mark.ucdavis.edu>
Source record: 68103
Cross-posted to: rec.games.video.classic,rec.games.video.marketplace,alt.atari.2600,rec.games.video.atari,comp.sys.atari.8bit

Welcome to yet another Reinhard's Rarities Auction!
I have the following stuff available in my current auction.
I'm looking to trade for Atari 2600 and Atari 400/800 carts ONLY!

You can find a list of what I already have on my Atari 2600 pages at:

http://www.pribish.com/atari.html

I'm looking for Atari 2600 and Atari 400/800 stuff not on my list,
so please e-mail me with any trade offers. There are only a few
rules to help speed this along...

1) Don't bid unless you plan to buy
2) I reserve the right to trade or pull any item

Increments: $1: Amounts from $1 to $20
$2: Amounts from $21 to $40
$3: Amounts from $41 to $60
$5: Amounts over $60

I'd prefer payment of a U.S. Postal Money Order, available at the post
office for 85 cents, and will ship the day or day after the M.O. arrives.
Items will be sent 2 weeks after payment by check to ensure the check
clears. Buyer pays shipping, which is $3 flat for any number of carts,
shipped within Canada/US. The shipping on systems, controllers, etc. or
for winners in overseas destinations will be the exact shipping cost.

This auction will run until Monday, December 8, 1997 and
switch to an e-mail only 24-hour Once-Twice-Sold format.

You can get an up-to-the-minute auction update before you bid at:

www.pribish.com/auction.txt

Thanks, Reinhard

3969. Re: Geos for Atari b bit?

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-04 00:00:00 UTC
From: bostone1@aol.com
Message-ID: <19971204152000.KAA23526@ladder02.news.aol.com>
Source record: 68104

GEOS never came out for Atari computers. It was made available for Apple and C64s, because they sold a lot more computers than Atari did. Some really nifty computers have come and gone, Atari among them, mainly due to lack of good business strategies, pure and simple.

Bob Stone

Bostone1@aol.com

3970. Re: Geos for Atari b bit?

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-04 00:00:00 UTC
From: jcompton@typhoon.xnet.com
Message-ID: <665njf$2dv$3@flood.xnet.com>
Source record: 68105

Bob Nixon (bigrex@nospam.primenet.com) wrote:
: Digging deep, as memory serves, I had a demo disk of 'Geos' for
: the Atari8. After talking to a guy at work that was into C-64's,
: he informed me that Geos (mouse and all), was a regular OS an the
: C-64. Why did it never migrate to the Atari Xl. Xe's?
: BTW, I bought Geo Works for the PC some years ago but don't have
: any use for it anymore. Does anyone know if this is the same
: company that made Geos for the 8bit computers?

Yes, Geo Works (and anything from the current company "Geoworks") is from the same people that did the original GEOS.

And I think the reason for the lack of GEOS on the Atari 8-bits is its point in history--1985-1986 was the peak for the Commodore 64, Commodore launched a redesigned 64 model with GEOS bundled in, and millions more sold.

The Atari 8-bit line was not enjoying quite the same success in the 1985-1986 period, as I recall, so Berkeley Softworks (as they were known at the time) was not about to invest in the platform.

: I think there was also more 80 column stuff for the C-64. They
: even had a Y-C cable and monitor. I not being a traitor, I'm just
: curious about how and why things went down like they did back
: then as I never bothered with C-64 because at that time, they
: were considered inferior??

The C128 had a true 80 column mode. You could coerce an 80 column text mode out of a 64, somewhat painfully, through hardware or software. It didn't work with very much. But both the 64 and 128 always had Y/C outputs...that's why the C= 1702 monitor took Y/C inputs and so many Atari people use them.

I didn't consider the 64 inferior, at the time or now. :)

Hallo!

Ich suche neue Informationen zur Atari *-Bit Szene, z.B.

- Termine von Messen, Regionaltreffen, Aktionen
- Infos ueber _neue_ Hardware, Software
- Berichte von Messen/Aktionen/Treffen
- Infos ueber aktuelle Software/Updates
- Neue, interessante URLs zu Atari 8-Bit.
- und was ihr sonst fuer interessant haltet.

Ich schreibe naemlich fuer den ABBUC e.V., einem deutschen Atari 8-Bit-Club
einen Newsletter, das ist eine Art moderierte Mailingliste, auf der Infos
in kurzform verschickt werden. Und ich bin auf eure Mithilfe angewiesen.

Schickt mir eure Infos in Kurzform an abbuc.news@poboxes.com

Naehere Infos dazu findet ihr im Web unter:
http://www.poboxes.com/abbuc.news (deutsch)
http://www.meijer.demon.nl/atari/abindxnl.html (hollaendisch)
http://www.meijer.demon.nl/atari/abindxen.html (englisch)

Danke fuer Eure Unterstuetzung!

The german user group "ABBUC e.V." provides a kind of moderated mailing list,
called "ABBUC News". This is a newsletter, where I put all new and interesting
information around the user group and around activities/hardware/software
for atari 8bit computers.

If you have any interesting information,
e.g.
- fair dates, club meetings
- infos about _new_ hardware, software that is released
- reviews about club meetings, fairs etc.
- infos about whats going on in the atari 8bit world
- new and interesting URLs
- other special infos about the atari 8bit

please send it to abbuc.news@poboxes.com
The newsletter will be in german languange only, althought there is an
english translation of it on the web.
See http://www.poboxes.com/abbuc.news for german languange infos
or http://www.meijer.demon.nl/atari/abindxen.html for english languange infos
or http://www.meijer.demon.nl/atari/abindxnl.html for netherlands infos.

Please send mails with new, actual infos only. No outdated infos wanted.

Thanks for supporting the german atari 8bit users.

From: Curt Vendel <cvendel@aol.com>
Message-ID: <3487057A.16B0DA0F@aol.com>
Source record: 68112

The Atari's did have an graphical OS called Diamond GOS, actually I gave some help to the programmer on the icons. It was a cartridge based software package that gave a very similar look & feel as Atari's TOS and could use a joystick or an ST mouse. Diamond Write, Diamond Paint and Diamond Publish were released, however they were a bit slow a buggy, but it was still cool to see a GEM type interface on the 8-bits, at one point discussions with Atari were started for Atari to sell Diamond, but nothing came of it, then a deal was made with a software publishing house which ended up ripping off the author and that whole deal when sour.

Another product which was promised by, I think it was David Sullivan was called GOES, it sounded very promising, he did release a Graphics 0 mode based OS initially, but the final true graphically version were bank switching, SpartaDOS X compatibility and other listed featured never materialized. I believe ANTIC had a type in program back in like 85 or so which was called "Windows" which allow you to do pop-up windows with whatever content you wanted, that had some promise to it.

At one point even the 65816 Turbo-OS had been discussed to have a graphics interface, but that was realistic since the Antic I believe couldn't talk with the 65816, I know there are certain problems involved, Bob Woolley knows a lot about this since he was toying around with added a 65816 PBI card to an XL computer.

I guess Berkley Systems just never wanted to do GEOS for the Atari's, too bad too since I've seen GEOS and it looked really good.

I discovered this when I submitted a bunch of games to
Compute!, ANTIC, and Analog. Nobody would touch
anything in Basic XL. But it makes me wonder why any
of them published stuff in Action.

Since Action would supposedly compile into ML, it made those programs
more universally runnable.

>With a few short in-line USR routines, you could do anything
>BXL/BXE would do with standard Atari Basic, and make your

>special language.

Well, the one thing you can't duplicate is the inherent
increase in execution speed of a Basic XL/XE program.
The same Basic program (in case anyone is not aware;
BASIC XL/XE will load Atari BASIC SAVE'd programs just
fine) runs much faster on Basic XL/XE.

Sure you can! Use the Turbo Basic routine, TURBO_OS.COM or SPEED.COM or
one of the others, and it will run even faster than BXL/BXE in standard
Atari Basic.

BXL/BXE will not load ALL Atari Basic programs and run them either.
When I took over Carina, there were tons of Atari Basic modules which
simply would not run under BXL/BXE for love nor money. While it is safe

to say that it will load and run many of them, I have found that most really worthwhile programs require extensive modification to work correctly under BXL/BXE.

>should work smoothly on any machine.

The only thing I'm aware of is that the move function on my BASIC XL cart behave differently between the 800 OS B (works right there) and XL OS (works wrong there). Loading the Translator on the XL fixes the problem. Otherwise, I've noticed no problems with BASIC XL.

Many of the cart functions which used the SET command would vary widely between carts and computers as well. Having tested several carts which purport to be the same identical version, a program will run differently on each, particularly in the timing region, which while this may not always be critical, it certainly can be.

The bottom line is that while every xl/xe user has Atari Basic, and certainly the majority of 400/800/1200 users do as well, the BXL/BXE carts are far more rare, and writing programs which require them is a very poor choice if you ever plan on letting your program be used by anyone other than yourself, with your specific BXL/BXE cart.

How so? Move work as documented on my 130XE. Observe the
cautions and
comments and all is well, as far as I can see. I've used it many times.

This as well as many other BXL/BXE functions will vary widely between
carts and computers. While yours may appear to work flawlessly, this
will not be true for many others. This inconsistancy is exactly why I
would never recommend using these languages in anything which is planned
for public distribution.

This is true to a point. There is a BASIC XL runtime package
that CAN
be given away with BXL programs. While you can't sell the runtime
program, you can sell the BXL program. I just wish they (OSS or ICD) had
come out with a BXE runtime.

While this is true, the runtime package does not take into account how
the SET commands on the original cart were set, and in many cases the
programs will act irratically when run using the runtime package.

OSS and ICD were notorious for creating products which were incompatible
and specifically designed to force you into buying more of their
products, and forcing your friends into buying their products. I have
been an advocate against since pratices from the beginning, and I still
am today. As Turbo Basic illustrated quite nicely, you don't have to
sacrifice standard Atari compatibility to add more power. I have yet to
see a single Atari Basic program which would not run perfectly, although
faster, with Turbo Basic. I can not say the same thing with BXL/BXE.

> Since I can't run TextPro without physically unplugging a
> BXL/BXE cart, I finally just said the heck with them all
> together as did everyone else I know, since TextPro is much
> more important than the few programs that run on BXL/BXE.

Are you running T-Pro under SpartaDOS? If so, there is a
program you
get with in the SpartaDOS Tool Kit called OSS.COM that allows you to
turn off any OSS/ICD cart. Xon or Xon2.com are used to turn them back on
again. Actually OSS.COM should be able to do that as well. By turning
off the cart, it essentially removes it from the system while not
actually physically removing the cart.

I've tried all of those programs under all of the Dos's, and never had
success with any of them. TextPro still thinks Basic is on, and will
not run properly, as do some other programs which have the same
problem. Any program which correctly checks for Basic is not going to
be fooled by the patch to trick them into thinking there isn't a Basic
cart plugged in when there really is, and it is a terrible practice to
expect programmers to look for your patch and abide by it, when it is
not the proper way of doing things.

Each cart, program etc. must remain compatible and use legal calls on
their own accord. While you can control the way your program/cart will
act, it is simply irresponsible to expect everyone else to write their
programs to coincide with your illegal code.

BXL/BXE and SpartaDos are prime examples of programs which could have
been leading edge breakthroughs if the programmers would have been more
concerned with compatibility and the end user rather than the profit
they could gain from them.

To this day, people don't seem to understand that if you write good
programs, you don't have to worry about the bottom line. That's exactly
why Shadow Software is still going strong, and ICD and OSS no longer
support Atari, because they ran out of people they could rip off.
Software designed with the end user in mind, rather than profit, is what
will inevitably separate the men from the boys. The boys have to find
new boys to play with, while the men already have their long established
friends to rely on.

Sure, I make less now than I did 10 years ago, but I am still here while
the others are long gone. I guess that should prove my point better
than anything else. There are still plenty of Atarians out here willing
to buy good compatible programs, and if you only concern yourself with
that, the bottom line will take care of itself.

> My experience has also been that the non-Atari routines in
> BXL/BXE are rather flaky, operating differently on different
> carts. This is not the case with in-line USR routines which
> should work smoothly on any machine.
>

> The Shadow
I haven't seen this? I have run stuff on my 800XL and 130XE that
I
wrote in BASIC XL and XE (assuming BXE isn't using upper 130XE RAM), and
all programs worked fine. I should try some on my 800. I just acquired
this unit recently. I would guess that if the ML routine was written
properly, it would work on all 8-bit systems.

If you are using the same cart to run them which they were written
using, then there is rarely a problem. The problems arise when a
different cart is used. The carts were not all equal. I have used 6 of
them and had every one of them act differently on different things. In
fact, the version of BXL I like the best is the disk based version,
which seems to run identically on every machine. There was seemingly
only one version of the disk based version, rather than the continual
changes in the carts. Even 2 carts with the same version number act
differently, and if you disassemble the code, sure as heck, the source
is slightly different. Why they didn't change the version number, I'll
never know.

WOW! Another rip-off E-bay auction!

Those who regularly frequent this newsgroup (r.g.v.a.) know that the going price for these around here (mint in box) is about $5-7 since a bunch just hit the market (and maybe less if you live by one of the vendors blowing them out for a couple bucks.)

Isn't it great we have E-bay so people can get ripped off??

Hi there,

Just wondering if anyone can help me out please.

I have got my old Atari 800xl at home right alongside my Atari Falcon 030
What I would like to do is access my CD ROM of Atari software directly
form the 8-bit.

From what I understand..... This would be like APE on the PC It is
possible with an SIO2PC cable (with modifications for the Falcon's port)
The files on my CD are a combination of .ATR, .OBJ, .BIN, .XFD, .COM I
have heard rumours of people out there who do this

What I would like is for someone who has done this, or is doing it to let
me know EXACTLY what I need, and how to do it (Oo-er!) My floppies are
all starting to have occasional errors, and my 1050 drive is starting to
give up.

Any help is most appreciated to stop me buying a PC to do this.

Many, many, many thanks,

Cheers,

John E. Cash

Shoot, mister, where've you BEEN? Back in those days, not everybody got
their game software by actually BUYING THE CARTRIDGE -- to some folks,
even today, it comes as a surprise even to FIND OUT that "Miner 2049er
came on a cart!" A lot of people "mysteriously acquired" DISK-based
copies of the game, and ONLY EVER saw it in that form! Not that I speak
from personal experience, of course.

Apropos Bounty Bob, anybody ever manage to create a usable disk-based
version of the Bounty Bob Strikes Back cart? I attempted it once, but got
tangled up in converting the cart's bank-switching scheme into a
disk-based "paging" one, and never completed the project...

Haven't actually built/used the thing myself, but I seem to recall Bob Puff telling me, gosh, close to ten years ago now, that SOMEBODY's published, build-it-yourself EPROM programmer/reader didn't work well. He might well have been speaking of the ANTIC one -- and CERTAINLY was, if there weren't any OTHERs! Bob naturally got around the problem by designing and building (and selling, I'm sure) his own, better unit...

g
them in any way, are NOT listed here.

"Vendor" =3D Reseller of products produced by others. Types of products
sold are given in categories: new hardware, used hardware, PD/freeware/
shareware, (new) commercial software, used (commercial) software.

"Developer" =3D Producer of products. Titles of products produced by the
developer are listed. No product can be developed by more than one
```

developer. No prices are given.

"Publisher" =3D Publishes a print or disk magazine, or a book. Complete
subscription or ordering information should be given, including prices.

"Repair Shop" =3D Can repair many 8-bit Atari and related hardware devices. =
Be
sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication
title. If no company name exists, a personal name is used. "See"
references indicate complete information may be found under the given
heading. "See also" references indicate closely-related information may
be found under the given heading.

When writing to request catalogs, it's always a good idea to include a
Self-Addressed Stamped Envelope. When writing to foreign firms, try
enclosing a couple of International Reply Coupons (IRC's) as well.

Super-Brief Copyright Primer

Commerical software - protected by copyright, may not be copied except for
personal archival purposes
Shareware -protected by copyright, may be freely copied and distributed,
shareware payment required for continued use
=46reeware - protected by copyright, may be freely copied and distributed,
no payment required for continued use
Public Domain software - NOT protected by copyright, anyone may do anything
with it, period.

Software is protected by copyright from the moment of creation. No copyrigh=
t
notice is required for copyright protection.

Software does not enter the Public Domain unless explicitly released to the =
PD
by the copyright owner. If there is no copyright notice, software must be
considered Freeware rather than in the Public Domain.

My article "Intellectual Property Protection for Computer Software" appeared
in Atari Classics, 3(1), 1994, pp. 4-7, or see:
http://www.library.carleton.edu/staff/michael/acarticle.html

Verfications -> YOU!

This list is in a constant state of development, and comes with no
guarantees. Information of this nature constantly ages; therefore, the
information contained in this list is constantly updated. Please use the
latest release of this list whenever possible!

I collect information for this list from wherever I can find it. While most
updates to this list come from you, the user of the list, I'd like to
recognize a few of my more prominent sources:

- Atari Classics, published by Bob Woolley
- New Atari User, published by Page 6 Publishing (Les and Sandy Ellingham)
- Classic Computing, published by the Historical Computer Society

"Hi!" to Marek Tomczyk, who has supplied so much information from Germany.

Remember, the success of this list is dependent on YOU, the reader, to
send me updates that correct errors that you find. If you use this
list, please do your part in keeping it useful for everyone!

There is a slight catch in that they require a $15 minimum (total) order,
but they have enough other junk that might be interesting to make up the
difference. :)

3996. Assembler + Drive Question

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-05 00:00:00 UTC
From: cgfm2@no.spam.hooked.net
Message-ID: <34877a25.343281@news.wenet.net>
Source record: 68122

Are there any commercial assemblers for the Atari 800XL? Not anything fancy and macro-based, but just with some good features?

Also, is it possible to read a 5-inch Atari floppy disk on a DOS based system? Clearly you'd need some program to make sense of the contents, but are all the tracks/sectors accessible?

Charles Mac Donald

: that one is the most obvious.

: --Otter

However....(fortunately) most of the 5200 carts were "converted" to the
8-bits by the elusive "Glen the 5200 Man". Most of these are available on
some of the 8-bit FTP sites.

8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not
Snail (Postal) Mail. Please let me know if I can't attach files to your
E-Mail. I will get back to you after the weekend. Please Direct all
Replies Through E-Mail to: bensmith@teleport.com.

I'm looking to trade for these Items for my Atari. I'm looking for
CatBoxes for Atari Jaguar, Jag-Links as well as Jag Controllers, Alien
vs Predator and even complete Jaguar Systems. If you have what I'm
looking for, check my Atari Catalogs for stuff to trade at:
http://www.teleport.com/~bensmith/bscomputers.shtml or
E-Mail bensmith@teleport.com for a trade.

Following is only a partial list of what's in my Computer HardWare &
SoftWare Catalogs. So check out my Catalogs!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got
HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers,
Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks & Under the
Monitor Power Directors to Manage & Protect your Equipment. Hardware
specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141
Monitor, Atari 1050 Disk Drives, Atari 1050 Happy Drive, Indus GT Smart

Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads,SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: Spectre GCR Macintosh Emulators, Color & MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST & Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II & Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

I have some MFM & RLL Hard Drives I got Directly from the Shadow of Shadow Software. Older Technology made with a lesser chance of Planned Obsolescence. Built like Tanks. The Shadow tells me each one worked before they were taken off their Computers. Each one, $25, as is.
E-Mail: bensmith@teleport.com or call Ben at: (503)256-9974.
Model numbers follow...

Kalok KL320 MiniScribe 8425 SeaGate ST-238R SeaGate ST-225
Lapine Titan LT 300 RLL MiniScribe 3425 Conner CP-321
Seagate ST-157A

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you test JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such as the 1090XL expansion Box. I got it from The Shadow of Shadow Software. It is the Best one of the Few that Atari made. And the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Go to: http://www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

Date: Tuesday, 1 May 1984
From: Kevin Rappold
Re: ATARI CPM SYSTEM-ATR 8000

The following is a review of a CPM 80 system called ATR8000 and made by a
company called SWP (Software Publishing). The ATR8000 allows the heretofore
left out Atari user acces to the CPM 80 and 86 world. The Atari computer is
hooked up as normal except that the ATR8000 is connected in the same position
that the Atari 850 interface box would go i.e. between the computer and all
periperals. The 850 box is no longer used (similar in use to the vestigial
human tail bone now) and the ATR8000 serves as the Atari interface box now.
The system can operate in two modes: as a CPM 80 machine or as a normal Atari
machine. I will discuss both systems.

When used in the Atari mode, the ATR8000 becomes a super-interface box. The
ATR8000 has 1 serial port, 1 parallel port, a standard 25 line disk drive
interface port, an Atari connector for Atari to ATR8000 connection and an
Atari connector for ATR8000 to Atari type disk drives. SWP sells a new DOS
called MYDOS which will handle single, Atari double, and true double density
disks on Atari drives. MYDOS will also allow the connection of just about any
type of drive to the ATR8000 25 conductor drive port and allow Atari files to
be stored on those drives (I am using an IBM PC compatible DDDS drive). The
drives can be configured in any order and even the IBM drive can be used to
boot Atari self booting disks. The parallel and serial port can both be used
for printers. The serial port can be used for computer to computer or modem
connection. The standard disk port can be used to connect up any 5 1/4 or 8"
drive that uses a standard 25 conductor bus. Up to 4 drives can be hooked up
to this port. The Atari connector port can be used to do normal Atari
periperal daisey chaining just as the 850 would be used. While in the Atari
mode the ATR8000 buffers all output using whatever memory is on the system.
So it serves as both a disk and printer buffer thereby freeing the Atari

system of that I/O wait.

In the CPM 80 mode the ATR8000 is a 64k Z 80 CPM machine. The CPM capable system must be purchased with the maxed out 64k memory option (16k machines for Atari interface use only are available). The 64k system comes with CPM 80 2.2 and a few utilities. One benny is that it comes with a tailored XMODEM program for simple dumb terminal modem use. The CPM system does not come with MBASIC hawever (bummer!). Other included code: CBIOS.ASM, BIOS.ASM, ASM.COM, ED.COM, STAT.COM, DUMP.ASM, DUMP.COM, LOAD.COM, MODEM.COM, SUBMIT.COM, XSUBMIT.COM, DISKDEF.COM (FOR READING OTHER MICRO DISK FORMATS), SYSGEN.COM, DDSYSGEN.COM, DDINIT.COM, and a few others I can't recall now. The CPM system also comes with an Atari bootable program that lets the Atari display two 40 column windows for a total 80 column display. As an option, SWP will sell you an Atari bootable program which will put a full 80 columns on a monitor connected to the Atari. In the CPM mode you must have a standard disk drive of some sort to boot the double density CPM system disk. The Atari drive cannot be used to boot CPM. So far the CPM seems to be fairly generic and modifiable. As an aside the SWP ATR8000 CPM system does not have to use an Atari at all. Inside the box are jumpers to allow the system to be used with a terminal as the keyboard and screen instead of the Atari. I have hooked up an ADDS Regent 100 I have and it works perfectly. They recommend something that is similar to an ADM3. So this system is not only for Atari users. Like the Atari mode all the interfaces are the same with the terminal (if used) being hooked up at the Atari connector with an Atari to RS232 cable SWP will sell you.

Finally, there is a third system which I do not have. SWP will sell you an ATR8000 add on board which will turn the 64k CPM 80 system into a 256k MS DOS or CPM 86 system. This board is called the CO-Power 86 and uses the Intel 8086 I believe. The add on board allows the CPM 80 system to still be used. The board comes with MS DOS. CPM 86 is an option for an extra fee.

Little points of interest: they processed my order in about 2 1/2 weeks and the system was well packed. The documentation for set up and insallation is fairly good. The tecnical information and CPM documentation is lacking. There is no CPM manual. Only a few of the CPM routines are explained. They readily answered technical questions on the phone and appeared knowledgeable in helping me when my IBM drive wouldn't address properly.

Here are some general prices:

16k ATR8000.... $330.00
64k ATR8000 w/CPM... $430.00
80 Column Pgm... $30.00
Terminal cable... $30.00
Disk Drive cable... $30.00
MYDOS Pgm... $30.00
Co-Power 86 Board
w/128k, MS DOS $400.00
Co-Power 86 Board
w/256k, MS DOS $500.00

The system is a real bargain in my opinion. So far it has performed perfectly.

Re: CORRECTION TO ATARI CPM SYSTEM-ATR8000 REVIEW

I incorrectly stated in my review of the SWP ATR8000, that the coprocessor board, Co-Power 88, uses the Intel 8086...it doesn't, it uses the normal Intel 8088 chip.

Sorry about that.

Kevin Rappold

From: Harris Shiffman
Subject: ATR8000 Corrections

Some comments about the review of the SWP ATR8000:

In Atari mode, the ATR (either the 16K or the 64K model) will act as a printer interface and buffer (using either the serial or the parallel port on the ATR for the printer) and as a disk controller. The disk controller will handle any combination of up to four 5.25 and 8 inch diskette drives. It does not support hard disks, although I have heard that someone has modified one to do so.

The software support for the serial port is limited to handling a serial printer. There is no software support for serial devices while in Atari mode. (CP/M does provide such support.) The ATR's ROM includes a printer driver (P:), but no RS232 driver. To use a serial printer, you run a provided BASIC program which patches the ATR to send printer text to the serial port, instead of the parallel port. By the way, the ATR does NOT boot most of the copy protected disks I have used to test it, so it doesn't entirely replace the good old 810.

In CP/M mode, the ATR uses the Atari as a terminal (which is why it is easy to replace the Atari with a regular terminal). The 64K system comes with the terminal emulator for the Atari. This emulator supports the BIT3 80-column board as well as the movable window 40-column screen.

To: Harris Shiffman

I DON'T KNOW WHAT KIND OF DRIVES YOU WERE USING BUT MY ATR WOULD BOOT ANY DISK I PUT IN IT. USING TANDON TM 100 DRIVES ALSO USING MYDOS THERE IS SUPPORT FOR USING THE SERIAL PORT

BILL

PS: MAYBE YOU HAVE A VERY OLD COPY OF ROM GIVE THEM A CALL AND FIND OUT
WHAT THE LATEST VERSION IS.

Interesting point. I've never used TBXL, Turbo_os ir speed.com. I'll
have to read up on these. I have TBXL, but prefer OSS BXL/BXE.

> BXL/BXE will not load ALL Atari Basic programs and run them either.

The only reason many Atari BASIC programs won't run is that they
contain BXL/BXE reserverd words used as variables. By changing the var
names, these progs should run like normal or better under BXL/BXE.

With the use of the BASIC XL runtime library, you can distribute your BXL programs and run them on almost any of the 8-bit machines (RAM is the limiting factor here). I just wish there was a BXE runtime library. I'd much rather use the 130XE's full potential rathers than limiting myself to 64K and limited reserved word library. BXE is much richer and even that could use a bit of enhancement as well as a runtime package and a compiler would also be nice.

There are only about 4 of the set commands you'd need to watch out for
that would behave badly if not set properly as you mention. This could
be accounted for. The two biggest offenders are set 8 and set 10. These
would be used in games and would most definitely cause problems in the
runtime package if not set the same as the cart routines.

> ---

Woah. Running an Atari BASIC program under TBXL could have some of the
same problems as BXL/BXE since TBXL does have more reserved words than
stock Atari BASIC. There would have to be some altyerations to the
program is some of the TBXL reserved words were used as vars.Albeit,
much fewer than BXL/BXE.

Shadow,
Who has a copy of the disk based version of BXL? I want one.
Since you have a programming business, would you be willing to write a
new version of BASIC that has the capabilities of BXE and can have a
runtime package or compiler that will work on most machines and
established PC emulators? I'd be willing to pay good bux for something
like that. Especially if it is universally usable across real and
emulated systems. I suppose there would have to be a means of
determining how much RAM is available to provide maximum facilities.
Obviously programms written for a 130XE wouldn't work on anything with
less than 128K, however programs weitten for a 64K machine would be more
universal.

4007. Reinhard's Rarities Auction 12-05-97

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-06 00:00:00 UTC
From: rpribish@wheel.dcn.davis.ca.us
Message-ID: <66bh90$sc3$1@mark.ucdavis.edu>
Source record: 68043
Cross-posted to: rec.games.video.classic,rec.games.video.marketplace,alt.atari.2600,rec.games.video.atari,comp.sys.atari.8bit

Welcome to yet another Reinhard's Rarities Auction!
I have the following stuff available in my current auction.
I'm looking to trade for Atari 2600 and Atari 400/800 carts ONLY!

You can find a list of what I already have on my Atari 2600 pages at:

http://www.pribish.com/atari.html

I'm looking for Atari 2600 and Atari 400/800 stuff not on my list,
so please e-mail me with any trade offers. There are only a few
rules to help speed this along...

1) Don't bid unless you plan to buy
2) I reserve the right to trade or pull any item

Increments: $1: Amounts from $1 to $20
$2: Amounts from $21 to $40
$3: Amounts from $41 to $60
$5: Amounts over $60

I'd prefer payment of a U.S. Postal Money Order, available at the post
office for 85 cents, and will ship the day or day after the M.O. arrives.
Items will be sent 2 weeks after payment by check to ensure the check
clears. Buyer pays shipping, which is $3 flat for any number of carts,
shipped within Canada/US. The shipping on systems, controllers, etc. or
for winners in overseas destinations will be the exact shipping cost.

This auction will run until Monday, December 8, 1997 and
switch to an e-mail only 24-hour Once-Twice-Sold format.

You can get an up-to-the-minute auction update before you bid at:

www.pribish.com/auction.txt

Thanks, Reinhard

4008. Auction: 8-Bit Memory Maps/Flip and Files/Manuals/Programs

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-06 00:00:00 UTC
From: classicauc@aol.com
Message-ID: <19971206133400.IAA29942@ladder02.news.aol.com>
Source record: 68044

December Auction - Update 9

Auction Rules:

-In case of ties, the first bid received is the bid accepted.

-Auction will continue through Monday, December 15, 10:00pm central time. After that date, bidding will continue on any items which have received a bid within the last 24 hours. Anyone may bid on an item that is still receiving bids. Minimum bid increment may be increased after the auction deadline.

At the deadline, items will be marked sold immediately if they had no bids in the last 24 hours. For
example, a cartridge that received a bid at the beginning of the action will be marked sold at the deadline
unless a higher bid is received within 24 hours before the deadline.

-Not accepting trades at this time.

-If you bid, you are expected to buy. Payment is by check or money order in U.S. Funds. No CODs. Allow 10 business days for checks to clear.

-If you have a U.S. address (except Alaska or Hawaii), total shipping and handling is $3.95 for any number of cartridges/manuals/magazines; $6.95 if package includes systems, modules, hardware, or more than 2 books. I'll pay any difference. Some items require actual shipping, if stated.

-Place a bid by item number and description. Your first bid must include your name, address, and phone.
If you would like to remain anonymous, please include a substitute name with each bid.

-Minimum starting bids are listed. Minimum bid increment is .50 on items under $3, $1 on items $3-
$9.99, $2 for items $10-29.99, and $5 for all others.

-Instructions and box are only included if stated. New in box is new, but not necessarily sealed. Complete
in box contains instructions and is used.

-Send all bids to ClassicAuc@aol.com.

Atari 8-Bit Computer Accessories
A1. Panasonic KX-P1092 Epson Compatible Dot Matrix Printer. Includes 2 ribbons (installed and extra unopened)/Operating Instructions manual (includes codes, charts, type-in BASIC examples). Without paper separator (wire rack). Supports near letter quality print. Handles friction feed or fan-fold paper. Very nice condition. Works well with Atari 850 Interface. Actual shipping added. -$19.95

semslie

A2. Atari 850 to Centronics Printer Cable. Works with above and other dot matrix printers. -$8.95 semslie

A3. Atari Dealer Demo Cartridge. 16K Dealer Demo in Centipede Case. Self-running. Shows advanced capabilities. Well executed programming tricks. Begins with multicolor Atari Logo with all colors displayed at once. Includes Household management, Recordkeeping (animated pencil), Home Entertainment (shows Star Raiders with different style tie-fighter), Investment Analysis, and Service Centers (draws U.S. map). Extremely rare. -$35 grabben

A4. AtariWriter Cartridge. Includes 50 page spiral bound manual, Quick Reference Card, and Helpful Hints fold-out card. -$7.95 min

A5. Atari Assembler Editor Cartridge CXL4003. With 79 page User's Manual and Programmer's Reference Card. -$8.95 min

A5a. Koala Pad. Includes Koala Pad touch tablet, stylus, Micro Illustrator and Touch Tablet Owners Manual. Very Rare. No Disks. -$8.95 min

Atari 8-Bit Computer/XE Game System Cartridges
A6. Miner 2049er (computer style) -$3 disk doctor
A7. Robotron: 2084 (computer style) -$3 disk doctor
A8. Final Legacy (computer style) -$2.50 tempest
A9. Joust (computer style) -$2.50 disk doctor
A10. Missile Command (computer style) -$2.50 min
A11. Super Breakout (computer style) -$2.50 min
A12. Barnyard Blaster (XE game system style - supports light gun *see Item A41 below) -$2.50 min
A13. Flight Simulator II (XE game system style) -$2.50 steg
A14. Millipede (computer style) -$3 tempest
A14a. Kindercomp cartridge. -$2.50 min
A14b. Centipede cartridge -$2.50 min

Atari 8-Bit Computer/XE Game System Cartridges
(New in boxes with instructions - not sealed)
A15. Star Raiders II -$6 cf943
A16. Battlezone -$5.95 tempest
A17. Ballblazer -$5.95 min
A18. Rescue on Fractalus! -$7 gmiller
A19. Desert Falcon -$5.95 tempest
A20. Thunderfox -$5.95 min

Atari 8-Bit Computer - Disks
A21. Pogo Joe (flip side for C64) disk -$1 min
A22. HomePak (flip side for C64), Batteries Included disk -$1 min
A23. Ken Uston's Professional Blackjack (flip side for C-64) with Operating Instructions manual. -$1.25 min
A24. Party Quiz Question Disk (General Edition 1), Suncom. Flip side for C-64. -$1 min
A25. F-15 Strike Eagle, Micropose disk -$1 min
A26. Blade of Blackpoole, Sirius disk -$1 min

A27. Twerps, Sirius disk -$1 min
A28. Spy vs. Spy and Spy vs. Spy II (Island Caper). Disk with Instructions. -$2.95 min
A29. Boulder Dash, First Star disk -$1.95 min
A30. Gruds in Space, Sirius disk -$1 min
A31. Repton, Sirius disk -$1 min
A32. Ali Baba and the Forty Thieves -$2 Joseph Red
A33. Murder on the Zinderneuf, Electronic Arts. Complete in package with disk and instructions/reference card. -$2.95 min
A34. Nudmehi Replica 1+1 Backup and Utilities Program. Designed to back up all Atari software prior to 8/15/82. Includes Sector Disassembler, Sector Search, Disk Bitmap, RPM Speed Adjustment. Support for optional data disks (not included). Disk and Instructions. -$2.50 Joseph Red
A35. CASDIS. Machine language program that converts Atari cassette-based programs to disk. Supports BASIC, machine language, and multi-load programs. With 28 page instruction manual. -$1.25 semslie
A36. Print Shop Graphics Library 3 with Reference Card. -$1.25 min
A37. Atari Word Processor Program Master Diskette -$1.95 min
A38. APX Insomnia Sound Editor with instructions -$1.95 min
A39. Ultima II Disk 2 Player Disk -$.25 gmiller
A40. S.A.M. Software Automatic Mouth Disk, Don't Ask Computer Software -$1 min
A40a. Track Attack disk, Broderbund -$1 min
A40b. Hacker disk, Activision -$1 min
A40c. Drol disk, Broderbund -$1 min
A40d. Spy Hunter disk, Sega -$1 min
A40e. Master of the Lamps disk, Activision -$1 min
A40f The Great American Cross Country Road Race, Activision -$1 min
A40g. Maxi Golf, Activision 2 disk set -$1.50 min
A40h. Mr Do! Disk. Atari Computers one side/Commodore 64 flip side. -$1 min

Atari Controllers
A41. Light Gun. Works with XE system and 8-bit computers. Use with Barnyard Blaster (above). -$8 gmiller
A42. Track and Field Controller (Blue with 3 buttons - 2 Run and 1 Jump/Throw). Works with 2600 and 8-bit Track and Field games. Very rare. -$12.95 disk doctor
A43. Standard Atari Paddle Controllers (pair) -$2.95 min
A44. Atari Standard Joystick (single) -$4 ebacher
A45. Atari Standard Joystick (single) -$4 ebacher
A46 Epyx 500XJ Joystick with Autofire -$5 The Maverick
A47. TAC-2 Joystick -$6 vinceb33

Miscellaneous
A48. Flip and File - Clear smoke colored plastic. Holds 10 8-bit or XE cartridges (elephant disk sticker on front). -$3 gmiller
A49. Flip and File - Same as above, except holds 5 1/4 floppy disks (elephant disk sticker on front). -$1.95 min
A50. Flip and File - Same as above, except holds 5 1/4 floppy disks (elephant disk sticker on front). -$1.95 min
A51. BCs Quest for Tires Poster. Approximately 17x23.5 inches. $.50 min
A52. Millipede (8-bit) box (crushed). $.25 min
A53. Atari Enamel Olympic Pin (see picture in Summer 84 Atari Connection)

-$2.95 grabben
A53a. Super Nintendo Mortal Kombat II Instructions -$.25 min
A53b. Colecovision French labels for Front Line. Excellent, like-new condition. -$.25 min

Books/Instructions
A54. Inside Atari BASIC. BASIC programming book. Key concepts (full of type-in examples). Fundamentals of Atari Graphics. GTIA Graphics, Game Controllers. 183 pages. -$4 gmiller
A55. Atari 410 Program Recorder Owners Guide (full color) -$.50 steg
A56. Energy Czar Computer Program Instructions (20 pages) -$.50 min
A57. Disk Operating System II Reference Manual. 100 page DOS 2 reference manual. -$1.50 min
A58. APX Ultimate Renumber Utility Instructions -$.50 min
A59. Atari Haunted House (Creative Computing) Instructions -$.50 steg
A59a. APX (Atari Program Exchange) Keyboard Organ Instructions -$.50
A59b. APX (Atari Program Exchange) Sketchpad Instructions -$.50
A59c. APX (Atari Program Exchange) Video Math Flashcards Instructions -$.50
A59d. APX (Atari Program Exchange) Presidents of the United States Instructions -$.50

A60. Master Memory Map by Santa Cruz Software. 100s Important Memory Locations. Hints on Their Use. 14 pages of reference material. -$3.95 min

A61. Master Memory Map by Educational Software by Educational Software. 30 pages. How to PEEK and POKE., IOCBs, System Timers, Color Locations, Player Missile Graphics Registers, Bugs in Atari BASIC, Bugs in the O.S. Much more! -$4.95 min

A62. ANALOG Computing Pocket Reference Card. BASIC Instructions, XIO Command Codes, Sound Command Pitch Values, Player/Missile Area Layout. 6502 Assembler Mnemonics, Error Messages, Code Translation Table, More. -$3.95 min

A63. Atari BASIC Reference Manual in excellent condition. 100 pages, 3-hole punched. Originally shipped with Atari BASIC cartridge. -$8.95 min
A64. Atari 800 Home Computer Owners Guide. CO60057. Rev. 1 (full color). -$1.95 semslie
A65. Atari 810 Disk Drive Owner's Guide. CO60056. Rev. 1 (full color). -$1.95 min
A66. Atari 810 Introduction To the Disk Operating System Guide. CO60054 Rev. 1 (full color). -$1.95 min

IT's nice but you should really give ALL links some kind of description.
(at least a ALT= one)
And using non-breaking spaces ( ) is REALLY not a good idea for creating
tables.I can't even read the "Atari PC-1" table.You should use actual tables.

"Borg Warner"???

Yeh,I have that.Of course 4-colour mode also halves the horizontal resolution.
(kind've defeats the purpose of the monitor)

> You can always use the composite output when you want to use something
> that uses artifacting, assuming you have NTSC equipment.

And room for two monitors.

> > If artefacting bothered you in Ice-T,why didn't you just turn down
> > the colour knob?

> Because a split video display is much sharper and easier to read.

You can also try a monochrome composite monitor.I use one with my enhanced
Apple 2e (which puts out 640x200,compared to the Atari's 320x200) and 80-column
text looks great.I still have to test that monitor out with the ST's 80-column
mode.

Of course I use a 800XL so I'm stuck with composite.

I was talking to a friend last night and we were talking about the WebTV and
Netlink (with PlanetWeb browser) and he was saying something to the effect that
at least the (Sega Saturn's) Netlink allowed you to use any ISP you want.
So is he right about having to use a certain ISP for WebTV.
Do you know where I can get information about WebTV's capabilities?
(I never heard of it FTPing before)
I still say that a cheap used PC is the way to go.
Though PC programmes tend to be a bit hard to use.You know how anoying it is
when BobTerm doesn't tell you what went wrong when it does a directory (via
pressing 0-9) and gets a error.Well that's NOTHING compared to the extreme
terseness of PC programmes.NEt-Tamer (a "all-around" internet programme like
Netscape) doesn't even report the fact that there was a error some times.
(try saving a USENET message to a non-sense filename (like one that refers to a
sub-directory) and it'll act like it worked)
Also the command interface is confusing.
For example:COPY FILE C:\DOS (which is a sub-directory on all PCs)
Now in MYDOS you'd get a error because you tried to over-write a sub-directory.
In SpartaDOS it would simply create a file the same name as the sub-directory
(since this doesn't cause a problem under SpartaDOS;there's never confusion on
whether you're refering to the file "DOS" or the sub-directory)
But MS-DOS will alter the command to read:
COPY FILE C:\DOS*.*
Which of course copies the file INTO the sub-directory.On the Atari you would
have to use:
COPY FILE C:\DOS\
to cause this behaviour.
(of course Atari uses : and >,not \)
My second point is that filenames get altered by the DIR command.
For instance if you download something call DIR.EXE and you wanted to run
it,you'd think just to type "DIR.EXE".But NOOOOO!
IT gets translated to "DIR *.EXE".The same with any other command.Also typing
"DIR *" or "DIR FILENAME" gets translated to "DIR *.*" and "DIR FILENAME.*".
And I haven't even begun to describe the great fun of text vs. binary
mode!<sneer>

Well in Lynx press return to download a FTP file.If Lynx just shows the file
then you're not meant to download it.(unless it's a text file)
I've found that (in v2.7) putting the filename extention in your own local
mime.types file will help out.(at least put "disk-img/diskcomm dcm" in)
You may have to define your own lynx.cfg file to be able to define a personal
mime.types file.(and you should make it something like "~/.mime.types" so that
it's hidden)
I did this using Lynx v2.7.I remember it not working in v2.5.

What OS and programme are you using to read news.And what command do you type to "follow-up"?
In tin it's "f" and in trn it's "F".

While the VIC only provides 40-column text,there are several 40-column text
modes.(including a multi-colour IRG-like mode and a multi-background mode)

> >Even without interupts the Commodore can change the palette for every
> >4 (colour-clock) by 8 (scan-line) block.(the size of a 40-col character)

> It doesn't change the "palette", since there is no color indirection
> involved with this. And the programmer has a choice of 16 marvelous
> colors, most of which are darker/lighter shades of each other.

Well,yeh,it does.The programme (in 320x200 mode) just POKEs in bit-maped bytes.
Each bit represents either the foreground or background.The colour RAM is used to decide
what bit values of 1 and 0 mean for each character cell.
In 160x200,you have four possible colours per character cell,but the background is the same
for the whole screen (unless changed by a interupt) giving you three unique colours per
c-cell.

And the Atari has 16 colours/8 shades palette.
(16 shaded only available in the non-palette GTIA modes)
You mostly get 2 shades of each colour on the Commodore with several shades of
white.Gauntlet uses black,white and two shades of a certain colour for each level.You can
readily see the higher contrast of Commodore's Gauntlet compared to Atari's.

> Not to mention that the weird timing on the display creates
> bizarre, unpredictable color artifacts.

Yeh.And they're useless artefacts as well.Of course the Commodore's 320x200 mode lets you
use more colours so Ultima looks better on it (and the Apple) than on the Atari.The Atari's

320x200 mode was always a weakness.Of course the title and in-dungeon graphics of Ultima 4 weren't converted to the Commodore way of doing things so they just appear black&white (with very slight bands of (useless!) colour.And you're limited to 2-colours per 8x8 square.(not a problem with Ultima)

> And this thing was released how many years after the Atari 800?

Not to mention the lack of any ability to add new device handlers.
Commodore DOS is INSIDE of the disk drive;you control DOS and the disk drive like you would a printer.And you're limited to 1-byte PUTs/GETs with all devices.

> >But multi-sized text is the domain of the Atari.
> >(though multiple graphics modes have nothing to do with DLIs)

> So is gradient shaded text thanks to a 128 color palette and
> DLIs.

Yeh.I just loved those 16-shade monochrome games like Xagon.
(and 4-shade ones like Dark Chambers)

But both computers have to agree that they beat the Apple.
(except that the Apple's artefacting is somewhere in-between the Commodore's and Atari's,which might be useful in Ultima-type games for greater number of colours-per-area)
Of course with a choice of but one I would choose the Atari.

4017. An example of unbridled ignorance.

Yet another colorful statement from gfranks/usedgame@telepath.com.

This is the same guy who gave me a curse-laden response involving someone named 'John Lister Peachlyn Jimmy Choice' to a test message I posted on alt.sega.genesis because I was having trouble with my newsreader. Very uncalled for, and very disturbing.

Do a DejaNews search on this guy - it's amazing the amount to sewage that flows off of his keyboard.

Also, he was recently thrown off of eBay. A modicum of research leads me to believe he was inflating his feedback.

In short, someone I would avoid.

ULTIMA IV Quest of the Avatar game for the ATARI 400/800, XL's or XE's. This game is one of the best fantasy/D&D type game series made that has been placed on many computer and game console platforms. Very fun and will give the player hours of fantastic fantasy game-playing! HighlyRecommended! This game is also on the rare side and is often sought out by collectors.

I think AtariSoft was Atari's brand name for titles released on other
platforms. I remember Defender, Centepede, and Galaxian on the ColecoVision
as some of the best and most fluid games for that system. A bit expensive
though--around $50.00 back in '83.

4023. Ice-T vs. Bobterm

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-06 00:00:00 UTC
From: "Thomas J. Andrews" <tandrews16@delphi.com>
Message-ID: <xVXmIpl.tandrews16@delphi.com>
Source record: 68059

Well, I managed to get Ice-T up and going yesterday on Delphi - sort of. So far, I like Bobterm better for what I usually do, but then I have over 6 years of experience with Bobterm and only an hour with Ice-T, so that might be coloring my judgement a little.

One thing I'm having trouble with is Ice-T's capture procedures. I'm used to toggling Bobterm's capture by pressing OPTION and letting Bobterm pause things when the buffer is full so I can tell it a file name. I don't like to tie up my phone for any longer than necessary, so I usually just capture my email and Usenet posts nonstop to my RAMdisk and read them offline. (I do like Itay's COL80.COM 80-column reader, though. VERY nice on my C=1701 in split video) With Bobterm, I just get things started, then lean back and watch until they're done. With Ice-T, I have to empty the capture buffer each time it fills up myself - and I have to make sure I don't try to save the capture buffer while data is coming in. Bobterm is easier.

I missed my log-on macro right away, too. Maybe I'll do better with it once I get used to it, but so far I'd rather have an 80-column, VT100 Bobterm...

TJ

p.s. I'm using Bobterm to post this.

> Well, I managed to get Ice-T up and going yesterday on Delphi - sort of.

-- snip --

Hi Tom,

Everything in software is a tradeoff. Considering BobTerm's age, and the fact that Puff couldn't have conceived of such things as Ataris doing Internet stuff, VT-100, modems faster than 19.2K, etc., it's really still a very workable program.

Does your ISP require VT-100 emulation? If they don't, one alternative might be to get an XEP-80 and a cheap monochrome monitor and use your BobTerm that way. It will cost, but it might do the job. Best Electronics is one source of the XEP-80 and even sells it in a package with AtariWriter-80.

Ice-T may be a bit inconvenient to use as you've described, but with further encouragement, Itay might come back into the process one day and address those issues. Funny -- I liked his concept too, but ran into some trouble with the program. Since I also have a PC, I just didn't bother trying to get it to work at its best. I'd like to do that some day.

Are you rejoining OHAUG next year?

From: atari8bit@aol.com
Message-ID: <19971207163800.LAA15001@ladder02.news.aol.com>
Source record: 68065

I have an Atari 810 Floppy Drive that has been modified. My guess is that it has to do with some type of ability to copy protected software. I have Happy Rev 7.1 software, but the drive is not "happy" when this software is used. I also have Archiver software Rev 2.5 and the drive does not work with this software. From the old magazines there were ads for "The Chip". Does anyone out there have a copy of that software and could they EMail me a copy as an ATR or DCM file???

The modification I see is on the 810 side board and is done on the back side (non component side). There are 2 24-pins soldered to the backside of the board and are on top of each other and there are also 2 14-pin chips also soldered to the backside of the same board with wiring going between all these chips. There are no mods to the component side of the board. A happy is not installed as I checked for this first.

Anyone remember this mod from yesteryear ?????

Thanks,

Atari8bit

>A quicky - are 5200 games the same versions as 800 games?

In their infinite wisdom, the home video game division
of Atari decided that they would use the same basic 8-bit
custom hardware in the 5200, but they moved some registers
around and made goofy new controllers.

The software should be similar since the hardware is
essentially the same, but due to the register conflicts
the programs are not interchangeable between the two
systems.

Stupid Atari.

If you're looking for a correct compiler for your /|\ machines, you can take
a look on the Oric pages.
The optimisation level is not really fabulous, but it works well.
The compiler generates pseudo code that is translated in 6502.
The linker mixes all 6502-generated sources, and real asm files as well, and
look for library files.
For more explanation, you can take a look on my Oric page, in the section
"how to code on an Oric computer" at the following url:
http://wwwperso.hol.fr/~mpointie
I think that you can find interesting stuff.
Sincerly yours,
Mike.

sorry for my lame question. But how can I 'say' Centipede to use a
trakball?

Quick answer: No and yes.

Some are the same with modifications for the 5200 hardware and sticks.
Some have completely different graphics.

Actually, Delphi is quite pleased with Bobterm's VT52 emulation unless you go to use their version of Lynx for web-surfing. I had no trouble FTPing Ice-T to my Delphi workspace and then downloading it with Bobterm. My basic plan was to get comfortable with Ice-T in areas I know before venturing into the unknown, like Lynx. I still think it's a sound plan.

I most certainly am going to renew my OHAUG membership. I expect to get my check out this week, but tell Ron keep my name on the rolls even if I'm late. It'll get there!

As far as the touch tablet being electrically the same as TWO paddles you
are correct, but the point is that for motion on a two dimensional grid
excution with the touch tablet is vastly faster than using the paddle
pair. There was a construction project that allowed for conversion of a

Co-Co joystick to be used on the 8bit and that was in essence the same a two paddles mechanically connected to allow for x/y axis control via tha paddle inputs and that device is also quite fast as well.

4042. FS: Original Atari ST Disk Magazines - "ST X-Press" "Computes Atari ST" & " Analog" -21 total

Newsgroup: comp.sys.atari.8bit

>
>Anyone remember this mod from yesteryear ?????

I don't remember that mod, but I can tell you it is definitely not The Chip
(original Archiver). I have 3 Archivered 810's myself, and that is only the
EPROM, 3 trace cuts and 3 jumpers.

The Archiver disk is itself protected, so you will probably have to have a disk
snail-mailed to you. But I doubt it will help you with that mod.

4044. 8-Bit carts, mint Ult IV and HUGE 800 System available...

4045. Reinhard's Rarities Auction 12-07-97

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-08 00:00:00 UTC
From: rpribish@wheel.dcn.davis.ca.us
Message-ID: <66gf8h$q76$1@mark.ucdavis.edu>
Source record: 67985
Cross-posted to: rec.games.video.classic,rec.games.video.marketplace,alt.atari.2600,rec.games.video.atari,comp.sys.atari.8bit

Welcome to yet another Reinhard's Rarities Auction!
I have the following stuff available in my current auction.
I'm looking to trade for Atari 2600 and Atari 400/800 carts ONLY!

You can find a list of what I already have on my Atari 2600 pages at:

http://www.pribish.com/atari.html

I'm looking for Atari 2600 and Atari 400/800 stuff not on my list,
so please e-mail me with any trade offers. There are only a few
rules to help speed this along...

1) Don't bid unless you plan to buy
2) I reserve the right to trade or pull any item

Increments: $1: Amounts from $1 to $20
$2: Amounts from $21 to $40
$3: Amounts from $41 to $60
$5: Amounts over $60

I'd prefer payment of a U.S. Postal Money Order, available at the post
office for 85 cents, and will ship the day or day after the M.O. arrives.
Items will be sent 2 weeks after payment by check to ensure the check
clears. Buyer pays shipping, which is $3 flat for any number of carts,
shipped within Canada/US. The shipping on systems, controllers, etc. or
for winners in overseas destinations will be the exact shipping cost.

This auction will run until Monday, December 8, 1997 and
switch to an e-mail only 24-hour Once-Twice-Sold format.

You can get an up-to-the-minute auction update before you bid at:

http://www.pribish.com/auction.txt

Thanks, Reinhard

> version of the Bounty Bob Strikes Back cart? I attempted it once, but got
> tangled up in converting the cart's bank-switching scheme into a
> disk-based "paging" one, and never completed the project...

A loong time ago I had a disk with BBSB that worked. I actually played
all levels. I don't know if this disk was created from a cart or from
some other media.

I also had a tape with BBSB on before I had a diskdrive.
Took me 15 minutes to load and worked about half of the times i tried.
That tape seemed like an authentic copy since the software on it was
encrypted, never managed to crack the last part of the encryption
scheme. I only tried for the intellectual challenge (of course) 8-).

Regards Olav

4047. Atari 2600 cartridge font?

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-08 00:00:00 UTC
From: rpribish@wheel.dcn.davis.ca.us
Message-ID: <66gp4p$3cg$1@mark.ucdavis.edu>
Source record: 67987
Cross-posted to: comp.sys.atari.8bit,comp.fonts,alt.illustration.technical,comp.graphics.apps.freehand,comp.graphics.apps.photoshop,comp.graphics.apps.pagemaker,comp.graphics.misc,alt.design.graphics,alt.graphics,alt.binaries.fonts

Does anyone know the name of, or where to get, the original
lower case font used on Atari 2600 cartridge labels? It is very
similar to the Bauhaus font. My band Missile Command just finished
remixing our demo - I'm in the process of redesigning the tape and
CD cases and want to use the original Atari font for the titles.
Any help would be appreciated. Please e-mail me with any info.

Thanks, Reinhard

December Auction - Update 10

Auction Rules:

-In case of ties, the first bid received is the bid accepted.

-Auction will continue through Monday, December 15, 10:00pm central time. After that date, bidding will continue on any items which have received a bid within the last 24 hours. Anyone may bid on an item that is still receiving bids. Minimum bid increment may be increased after the auction deadline.

At the deadline, items will be marked sold immediately if they had no bids in the last 24 hours. For
example, a cartridge that received a bid at the beginning of the action will be marked sold at the deadline
unless a higher bid is received within 24 hours before the deadline.

-Not accepting trades at this time.

-If you bid, you are expected to buy. Payment is by check or money order in U.S. Funds. No CODs. Allow 10 business days for checks to clear.

-If you have a U.S. address (except Alaska or Hawaii), total shipping and handling is $3.95 for any number of cartridges/manuals/magazines; $6.95 if package includes systems, modules, hardware, or more than 2 books. I'll pay any difference. Some items require actual shipping, if stated.

-Place a bid by item number and description. Your first bid must include your name, address, and phone.
If you would like to remain anonymous, please include a substitute name with each bid.

-Minimum starting bids are listed. Minimum bid increment is .50 on items under $3, $1 on items $3-
$9.99, $2 for items $10-29.99, and $5 for all others.

-Instructions and box are only included if stated. New in box is new, but not necessarily sealed. Complete
in box contains instructions and is used.

-Send all bids to ClassicAuc@aol.com.

Atari 8-Bit Computer Accessories
A1. Panasonic KX-P1092 Epson Compatible Dot Matrix Printer. Includes 2 ribbons (installed and extra unopened)/Operating Instructions manual (includes codes, charts, type-in BASIC examples). Without paper separator (wire rack). Supports near letter quality print. Handles friction feed or fan-fold paper. Very nice condition. Works well with Atari 850 Interface. Actual shipping added. -$19.95

semslie

A2. Atari 850 to Centronics Printer Cable. Works with above and other dot matrix printers. -$8.95 semslie

A3. Atari Dealer Demo Cartridge. 16K Dealer Demo in Centipede Case. Self-running. Shows advanced capabilities. Well executed programming tricks. Begins with multicolor Atari Logo with all colors displayed at once. Includes Household management, Recordkeeping (animated pencil), Home Entertainment (shows Star Raiders with different style tie-fighter), Investment Analysis, and Service Centers (draws U.S. map). Extremely rare. -$35 grabben

A4. AtariWriter Cartridge. Includes 50 page spiral bound manual, Quick Reference Card, and Helpful Hints fold-out card. -$7.95 min

A5. Atari Assembler Editor Cartridge CXL4003. With 79 page User's Manual and Programmer's Reference Card. -$8.95 min

A5a. Koala Pad. Includes Koala Pad touch tablet, stylus, Micro Illustrator and Touch Tablet Owners Manual. Very Rare. No Disks. -$8.95 min

Atari 8-Bit Computer/XE Game System Cartridges
A6. Miner 2049er (computer style) -$3 disk doctor
A7. Robotron: 2084 (computer style) -$3 disk doctor
A8. Final Legacy (computer style) -$2.50 tempest
A9. Joust (computer style) -$2.50 disk doctor
A10. Missile Command (computer style) -$2.50 min
A11. Super Breakout (computer style) -$2.50 min
A12. Barnyard Blaster (XE game system style - supports light gun *see Item A41 below) -$2.50 min
A13. Flight Simulator II (XE game system style) -$2.50 steg
A14. Millipede (computer style) -$3 tempest
A14a. Kindercomp cartridge. -$2.50 min
A14b. Centipede cartridge -$2.50 min

Atari 8-Bit Computer/XE Game System Cartridges
(New in boxes with instructions - not sealed)
A15. Star Raiders II -$7 tempest
A16. Battlezone -$5.95 tempest
A17. Ballblazer -$5.95 min
A18. Rescue on Fractalus! -$8 tempest
A19. Desert Falcon -$5.95 tempest
A20. Thunderfox -$5.95 min

Atari 8-Bit Computer - Disks
A21. Pogo Joe (flip side for C64) disk -$1 min
A22. HomePak (flip side for C64), Batteries Included disk -$1 min
A23. Ken Uston's Professional Blackjack (flip side for C-64) with Operating Instructions manual. -$1.25 min
A24. Party Quiz Question Disk (General Edition 1), Suncom. Flip side for C-64. -$1 min
A25. F-15 Strike Eagle, Micropose disk -$1 min
A26. Blade of Blackpoole, Sirius disk -$1 min

A27. Twerps, Sirius disk -$1 min
A28. Spy vs. Spy and Spy vs. Spy II (Island Caper). Disk with Instructions. -$2.95 min
A29. Boulder Dash, First Star disk -$1.95 min
A30. Gruds in Space, Sirius disk -$1 min
A31. Repton, Sirius disk -$1 min
A32. Ali Baba and the Forty Thieves -$2 Joseph Red
A33. Murder on the Zinderneuf, Electronic Arts. Complete in package with disk and instructions/reference card. -$2.95 min
A34. Nudmehi Replica 1+1 Backup and Utilities Program. Designed to back up all Atari software prior to 8/15/82. Includes Sector Disassembler, Sector Search, Disk Bitmap, RPM Speed Adjustment. Support for optional data disks (not included). Disk and Instructions. -$2.50 Joseph Red
A35. CASDIS. Machine language program that converts Atari cassette-based programs to disk. Supports BASIC, machine language, and multi-load programs. With 28 page instruction manual. -$1.25 semslie
A36. Print Shop Graphics Library 3 with Reference Card. -$1.25 min
A37. Atari Word Processor Program Master Diskette -$1.95 min
A38. APX Insomnia Sound Editor with instructions -$1.95 min
A39. Ultima II Disk 2 Player Disk -$.25 gmiller
A40. S.A.M. Software Automatic Mouth Disk, Don't Ask Computer Software -$1 min
A40a. Track Attack disk, Broderbund -$1 min
A40b. Hacker disk, Activision -$1 min
A40c. Drol disk, Broderbund -$1 min
A40d. Spy Hunter disk, Sega -$1 min
A40e. Master of the Lamps disk, Activision -$1 min
A40f The Great American Cross Country Road Race, Activision -$1 min
A40g. Maxi Golf, Activision 2 disk set -$1.50 min
A40h. Mr Do! Disk. Atari Computers one side/Commodore 64 flip side. -$1 min

Atari Controllers
A41. Light Gun. Works with XE system and 8-bit computers. Use with Barnyard Blaster (above). -$8 gmiller
A42. Track and Field Controller (Blue with 3 buttons - 2 Run and 1 Jump/Throw). Works with 2600 and 8-bit Track and Field games. Very rare. -$12.95 disk doctor
A43. Standard Atari Paddle Controllers (pair) -$2.95 min
A44. Atari Standard Joystick (single) -$4 ebacher
A45. Atari Standard Joystick (single) -$4 ebacher
A46 Epyx 500XJ Joystick with Autofire -$5 The Maverick
A47. TAC-2 Joystick -$6 vinceb33

Miscellaneous
A48. Flip and File - Clear smoke colored plastic. Holds 10 8-bit or XE cartridges (elephant disk sticker on front). -$3 gmiller
A49. Flip and File - Same as above, except holds 5 1/4 floppy disks (elephant disk sticker on front). -$1.95 min
A50. Flip and File - Same as above, except holds 5 1/4 floppy disks (elephant disk sticker on front). -$1.95 min
A51. BCs Quest for Tires Poster. Approximately 17x23.5 inches. $.50 min
A52. Millipede (8-bit) box (crushed). $.25 min
A53. Atari Enamel Olympic Pin (see picture in Summer 84 Atari Connection)

-$2.95 grabben
A53a. Super Nintendo Mortal Kombat II Instructions -$.25 min
A53b. Colecovision French labels for Front Line. Excellent, like-new condition. -$.25 min

Books/Instructions
A54. Inside Atari BASIC. BASIC programming book. Key concepts (full of type-in examples). Fundamentals of Atari Graphics. GTIA Graphics, Game Controllers. 183 pages. -$4 gmiller
A55. Atari 410 Program Recorder Owners Guide (full color) -$.50 steg
A56. Energy Czar Computer Program Instructions (20 pages) -$.50 min
A57. Disk Operating System II Reference Manual. 100 page DOS 2 reference manual. -$1.50 min
A58. APX Ultimate Renumber Utility Instructions -$.50 min
A59. Atari Haunted House (Creative Computing) Instructions -$.50 steg
A59a. APX (Atari Program Exchange) Keyboard Organ Instructions -$.50
A59b. APX (Atari Program Exchange) Sketchpad Instructions -$.50
A59c. APX (Atari Program Exchange) Video Math Flashcards Instructions -$.50
A59d. APX (Atari Program Exchange) Presidents of the United States Instructions -$.50

A60. Master Memory Map by Santa Cruz Software. 100s Important Memory Locations. Hints on Their Use. 14 pages of reference material. -$3.95 min

A61. Master Memory Map by Educational Software by Educational Software. 30 pages. How to PEEK and POKE., IOCBs, System Timers, Color Locations, Player Missile Graphics Registers, Bugs in Atari BASIC, Bugs in the O.S. Much more! -$4.95 min

A62. ANALOG Computing Pocket Reference Card. BASIC Instructions, XIO Command Codes, Sound Command Pitch Values, Player/Missile Area Layout. 6502 Assembler Mnemonics, Error Messages, Code Translation Table, More. -$3.95 min

A63. Atari BASIC Reference Manual in excellent condition. 100 pages, 3-hole punched. Originally shipped with Atari BASIC cartridge. -$8.95 min
A64. Atari 800 Home Computer Owners Guide. CO60057. Rev. 1 (full color). -$1.95 semslie
A65. Atari 810 Disk Drive Owner's Guide. CO60056. Rev. 1 (full color). -$1.95 min
A66. Atari 810 Introduction To the Disk Operating System Guide. CO60054 Rev. 1 (full color). -$1.95 min

Atari 2600 Manuals
0. Asteroids, Atari (b&w, 5 languages) -$.75 min
1. Human Cannonball, Atari (small black) -$.75 min
2. Hunt & Score, Atari (small black) -$.75 min
3. Ice Hockey, Activision (colored) -$.75 min

>>My problem is, I 'f'ollowup to posts in this group and my
>>followup disappears, at least partly.

If you use the "f", it may be starting a new thread, which you may
not see easily in a threaded newsreader (I don't use threading, just
read in sequence).

>>
>>I have very little understanding of usenet and internet.
>>I've posted about four followups that I've never seen return

>>the posts, because I get e-mail responses to posts I never
>>see in the group.

Another possibility is thatyour software filters out posts
from yourself, figuring you've already read them .. see if someone
else on your newsserver can read them.

>>
>>I posed this question to my sysadmin:
>>Q: Is it possible to 'filter' someone from usenet?
>>
>>I got back:
>>A: No, not generally.

Most news software has some sort of filtering capability (ie -- killfiles),
for filtering out people or threads you find personally obnoxious.
But you have to set this up yourself, generally.

>>
>>I suppose it can be done, because I doubt this ISP (CFN) is

>postings to newgroups. And even limited what articles one receives.
>Can't prove it. (yet) But I'm almost positive.

I think you'd need to have administrative access to cancel posts from
someone other than oneself.

>
>I would like to hear more about this subject from the experts.
>

Not an expert, just a long time user.

Hate quoting myself, but my brain is slow this AM ... I should add
that one then would use an "F" to post to the same thread.

>Of course I use a 800XL so I'm stuck with composite.

You can still use split video with an 800XL. Just substitue the luma signal with the composite signal. This will result in a slightly sharper image than pure composite. I use this and I do notice a difference. I also get a great mono display when using chroma and luma the proper way. I'm using a Commodore 1802.

Date: Wed, 03 Dec 1997 18:08:13 -0500
From: John Davison <john_davison@compuserve.com>
Subject: New Atari User

Dear All,
Just a quick note to let you know that I spoke to Les Ellingham
recently and he tells me that the next issue of NAU won't now be out until
late January. The delay has been caused by pressure of other work, but he
assured me that it WILL be published and he'll ensure that next year
publication will get back onto a regular schedule.
Regards....John

>remixing our demo - I'm in the process of redesigning the tape and
>CD cases and want to use the original Atari font for the titles.
>Any help would be appreciated. Please e-mail me with any info.
>
>Thanks, Reinhard

Hi Reinhard!

Being a game collector (arcade standup's, not cart systems) I was intrigued :)
I don't know what the font is, but you could quite possibly find the answer
from someone in one of the collector newsgroups. Search for rec.games.video
and you'll see quite a few different newsgroups. The ones that are devoted
the home systems can probably help you. (note: DONT ask in
rec.games.video.ARCADE.collecting because that group is for standup machines,
and a LOT of people will jump on you for posting a home system question) :)

good luck!

Do what Bill has said below and then do a file save. But with this
file save you want to add a ",A" at the end.

ie: SAVE"D:MYPGM.BAS",A

This tells Atari Basic to save the file in ATASCII. Then you can use
another program called SDV (I don't remember the exact name, but
can be found at the University of Michigan site) to convert all the
ATASCII 155's to regular ASCII carriage returns.

Then you could use a text editor on the IBM to edit the program there.

I think you are confusing Atari BASIC with IBM BASIC.

I think what he wants is

LIST "D:MYPGM.LST"

If you're using Unix, you can translate an ATASCII text file to Unix with
tr \\233 \\012 <infile.name >outfile.name

While we're in the stupid Unix tricks, you can convert a .ATR file to .XFD
(assuming it's a single density disk) with

dd if=disk.atr of=disk.xfd bs=16 skip=1

I think the original poster wanted a way to read BASIC programs without using an actual Atari or an emulator. Even if he didn't, that's a much more interesting challenge than just LISTing the program to disk. Why can't you just parse a tokenized BASIC file and writes it out as ASCII? I know one of the Compute! collections has some information on the tokenized BASIC format, and so does De Re Atari.

> DCM file???

Well, in order to use "The Chip" software, you have to "open" the chip on the 810 by putting in a 4 digit number such as "1190". Good luck knowing which number it is however..... otherwise, the 810 will operate just like a normal 810 disk drive.

4063. Utility to write Atari disk images to PC floppy

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-08 00:00:00 UTC
From: miljenko@zems.fer.hr
Message-ID: <66hf2d$m1v@bagan.srce.hr>
Source record: 68003

Hello to all 8-bit Atari enthusiasts all over the world!

Now to the question I have.
Is there a utility which will write Atari disk images (atr | dcm | xfd) to a
PC 360K floppy? One should be able to use those
disks on a real Atari later. In my case on a 1050.

Mike,

******************************************************
===============VINTAGE MICRO-COMPUTERS===============
============EMAIL: Vintage_Micro@yahoo.com============
******************************************************
Hi everyone,
I am back! I had alot of problems with my email at Netcom so I am
currently using a Yahoo address now.

Anything on this list I will accept trades for Amiga items. The proceeds
enable me to further my beloved hobby and also help others who
collect/use/love old micro-computers. Of course my main love and area of
expertise is the C64. I am in the process of moving into the world of
the Amiga.

You will notice that I am trying to be as detailed as possible about my
listings. I am a collector and have been buying items online for a while
and I really wish everyone would list in a detailed manner. It
definately makes it easier on the customer, so that they can decide if
said item is useful to them or not. I will also try to answer as many
questions as I can about each item listed.

This list keeps expanding(so check it regularly or request to receive
updates via email). I have alot of items to inventory, check and clean.
Email me your orders and I will process them as fast as I can. To make
the transaction faster, please email your address with your order, that
way I can calculate shipping and give you a total. Also... if you wish
to receive future lists by email, send me email with subscribe in the
subject line.

So far Response has been great! Thank you to all who have placed orders.

Please enjoy and Happy computing to all!

==========GAMES==========

TITLE: Galaxian
PUBLISHER: Atarisoft
REQUIREMENTS: Commodore 64 computer
Cartridge
NOTES: Like the classic arcade game. Definately one of my favorites. Addictive!
PRICE: $5

TITLE: Jupiter Lander
PUBLISHER: Commodore Electronics, LTD.
REQUIREMENTS: Commodore 64 computer
Cartridge
NOTES: Like the arcade game. One of the earliest C64 game cartridges.
PRICE: $3.50

TITLE: Temple of Apshai
PUBLISHER: EPYX
REQUIREMENTS: Commodore 64 computer, Data cassete
3 Tapes
NOTES: This is the famous game Temple of Apshai, an early dungeon type game. I remember playing this for hours as a kid. This comes with a box, all documentation, and 3 tapes. Highly collectable peice.
PRICE: This happens to be another one of those items I am not sure I want to sell unless the offer is right. I will trade this for other Commodore items too. Please make an offer.

**********COMMODORE RELATED HARDWARE**********

ITEM: VIC 20 Power Supply
DESCRIPTION: Small black VIC 20 Power Supply, old style with small two prong female plug.
REQUIREMENTS: A VIC 20 computer
NOTES: Tested and works fine
PRICE: $5

ITEM: X1541 Cable
DESCRIPTION: This cable enables the user to hook-up a 1541 drive to the parallel port of you PC to transfer files (Like the ones you got off the web)

REQUIREMENTS: A 1541/1571 or compatable drive, A PC with a parallel port, a copy of Star Commander (available all over the web, just do a search)
NOTES: I have been transferring files from my PC to my commodore 64 for about a year and a half now. To make things easier I now have a 1541 drive attached to my PC at all times. I make these cables myself. They look good and are durable. They are also tested prior to shipping. I can make these in custom lengths (not to exceed 4 feet).
PRICE: $12

ITEM: Serial Cable
DESCRIPTION: You need one of these to use your floppy drive and your commodore printer.
NOTES: I make these custom so you may specify a particular length you require (not to exceed 4 feet). They look good and are durable. They are also tested prior to shipping.
PRICE: $8

==========FLOPPY DRIVES==========

ITEM: Commodore 1541 Floppy drive
QUANTITY: 3
DESCRIPTION: 5.25 inch floppy drive (serial)
NOTES: Drive powers up lights come on. yet drive does not work, more than likely an alignment problem. You may be able to re-align these by using software and documentation Via the web(I have been lucky on several occasions doing this), I just simply do not have the time to mess with these. Worse comes worse they can ban used for parts for another ailing 1541 drive. No power cable included(you can pick these up at Radio Shack or most computer stores).
PRICE: $5 each.

ITEM: Commodore 1541 Floppy drive
QUANTITY: 2
DESCRIPTION: 5.25 inch floppy drive (serial)
NOTES: Drives work great. No power cable included(you can pick these up at Radio Shack or most computer stores).
PRICE: $15 each or $20 with a power cable.

==========JOYSTICKS==========

ITEM: Wico Command Control
DESCRIPTION: This is a high quality joystick that has a fire button on the base and one on top of the stick with a selector to switch between the two. A great joystick that has an excellent feel to it, definately a tool for the pro-gamer. Very clean!
REQUIREMENTS: For use on most 8 bit commodores and 8 bit atari including the atari 2600
PRICE: $5.00

ITEM: Competition Pro Joystick
DESCRIPTION: This is a high quality joystick that has two buttons on the

base(for left or right hand players not fire button A or B). Definately
a tool for the pro-gamer. Durable construction and very clean.
REQUIREMENTS: For use on most 8 bit commodores and 8 bit atari including
the atari 2600
PRICE: $4.50

ITEM: Wico Black Max
DESCRIPTION: Small mid-quality joystick with a fire botton on top. Works
great and clean.
REQUIREMENTS: For use on most 8 bit commodores and 8 bit atari including
the atari 2600
PRICE: $3.00

ITEM: Gemstik
DESCRIPTION: Small mid-quality joystick with a fire botton on base.
Works great and clean.
REQUIREMENTS: For use on most 8 bit commodores and 8 bit atari including
the atari 2600
PRICE: $2.50

4072. Re: reading .BAS files on PC

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-08 00:00:00 UTC
From: Tom Rosso <slmph@cc.usu.edu>
Message-ID: <rMBaTH+W$okG@cc.usu.edu>
Source record: 68012

Exactly. I have an 800XL, but I have no way of transfering files between my Atari and my PC. Eventually, I plan to build a SIO2PC interface, but for right now, my plan is to use some ideas from BAS files on the internet to program my own files on my atari. Unfortunately, I can't read the BAS files on my PC, and that is my question.
Is there a way to read BAS files downloaded from the net and display them on my PC? Anyone know if there are Compute! archives on the net?
-Tom

> Galaxian on the ColecoVision as some of the best and most
> fluid games for that system. A bit expensive though--
>around $50.00 back in '83.

AtariSoft was sort of Atari's attempt to support their competitors' computers and to get a piece of the pie. At the time, if you recall, Atari basically swept up nearly all the home rights of all the arcade games. This left the other software companies to do their own versions of arcade hits (under different names, etc.). AtariSoft wasn't always great at doing translations for other platforms, however. Their Pac-Man for the C64 looked totally inferior to an imitation version, which looked and sounded much closer to the arcade game. I only know that from first hand observation, not that I played it. :)

When "Computer Games" magazine would review stuff, they sometimes would do a side-by-side comparison of various platforms or similar games for a particular computer. That usually gave an indication on how enthusiastic or lazy a programmer could be.

>

You missed the point. I know about the distributor, and have known for at
least
2 or 3 months when I read about it on a local newsgroup. I was not talking
about
hiding the site. The faster it gets out in the open, the better!

All I said was that I was wondering if someone was going to snatch them all
up.
The electronics surplus store (famous, but the name escapes me) had all the
Jag controllers bought by *one* individual. When I dropped by the store
shortly
after hearing this, they confirmed what I heard on the net, but (and I don't
blame
them at all) they didn't divulge any hints as the whom was the buyer.

Since people seem to think these are worth from $10.00-20.00 for a new one,
these
will get snapped up in bulk. The only reason this hasn't happend with
O'sheas is that
even at 80-some-odd cents a cartridge, several million of 'em adds up the
total fast.

You'd probably be better off posting this in the appropriate newsgroups.
None of this appears to have much to do with Atari computers.

I have an Atari 800 and an Atari 410 & 1010 tape recorder, and I'm having problems recording a boot tape program to a tape using either recorder. I typed in a basic program which was supposed to record a boot tape program to tape. I ran the program, and the Atari made a buzz. I pressed play and record on the recorder (410 and 1010), and nothing happened to the tape in the recorder. I tried pressing play, record, and fast forward on the recorder, while the Atari was trying to record the boot tape program. The recorder was playing the tape, but nothing was being recorded to it. I waited 10 min, and the Atari was still trying to record the boot tape program to tape. I hit system reset, and gave up on trying to record a boot tape program. I couldn't use either recorder to record a basic program that had this line: 10 print "a".

Could there be something wrong with my recorders, or am I doing something wrong? My Atari 1010 has two ports and a cable to connect to the Atari's IO port. Which port on the 1010 should I connect the cable to? I would appreciate any replies to this post.

I have some '816s in 8-bits. The interface (to memory) is still 8 bits
and the system still runs at the same speed. You can execute the 65816
16 bit instructions, but you need to tweak the OS (interrupts move).
With a memory upgrade designed for it, you can address linear memory
above 64K without any special precautions. I am working on a 512K 1200XL
with a 65816 processor. The MAE assembler will even do 816 code - just
what the doctor ordered.

oh, boy! Who remembers how to run the C: device? Heck, who ever knew? I
think you have to do something like SAVE "C:" or LIST "C:", don't you?

Well, this is why I keep all these books handy....

CSAVE is one command.

as are the others that I mentioned.

Type SAVE "C:"
the computer buzzes
position the tape with FFORWARD and REWIND buttons and press the RECORD
and PLAY buttons
press RETURN

To load:
Type LOAD "C:"
computer buzzes
position tape, etc.
press RETURN

OK?

I forgot to mention this. The program that I typed in was supposed to create a boot tape game called Shoot!. The program that I typed in was in COMPUTE! The program that I ran never ended. It was stuck on the line that was trying to write the boot tape game to tape. Has anyone tried typing and running that program on a real Atari and not on a Atari emulator for a PC/Mac?

Its not exactly the right newsgroup to ask, but here's an answer:

Point your web browser to <http://www.xs4all.nl/~js/warez/> where you will
find a set of 1st Word-to-RTF conversion utilities for mac, unix, an dos.
Most modern word processing programs understand RTF (Rich Text Format), so
voila. Problem solved.

:-)

Good luck!

Hello,

I seem to remember that there was a 16-bit version of the 6502 known as the 65816. Is this correct? As I recall, the Apple IIgs, Apple's last effort at keeping the II system viable (and an admirable one, compared to Atari, IMHO) had one of these. Anyway, was there/is there a way to modify an XL/XE to be able to use a 65816, and to have the system take advantage of at least some of the 16-bit chip? Did someone come up with some kind of upgrade/mod back in the heyday, or has any brave soul out there now done this to their system, and if so, can you share how? I realize that the system wouldn't be a true 16bit, given all the other components that would need to be capable of operating at that rate, but I figure (and I'm probably completely wrong) that it's got to be a little faster?

Just curious.

The "screaming j's" problem can be eliminated, quite simply, by turning keyclick off.

I have no idea why this is so; This problem has never occurred to me, so I really don't know what's the cause, or how to fix it.

Hi everyone! Welcome to my Not-So-Big auction! I now accept COD orders (buyer pays extra on top of normal shipping). I'll make sure everything go through O.K. You know the rules, buyer pays shipping, ALL PRICES US$, $1 per cart to Can., $2 shipping per cart to USA, inquire about systems and extra COD orders. I have the right to add and take out items. I AM WILLING TO TRADE FOR THE FOLLOWING THINGS:

Famicom carts
Famicom sys
Famicom multicarts
Famicom Disk sys, and disks
Famicom=>NES and NES=>Famicom converters
SNES sys
NES multicarts
NES demo unit
Table-top games like Donkey Kong, Popeye

Minimum bids set, min. increasements are:

$1.00 - 5.00 =50 c.
5.50 - 10.00 =1.00
10.50 - 15.00 = 2.00
15.50 - 25.00 = 3.00
25.50 - + = 4.00

Now to the auction:

ALL HARDWARE UNITS HAVE POWER SUPPLY, ALL RF's ARE NOT ORIGINALS

Atari 8-bit:
All accessories have I/O cable

Atari 400, RF switch, no basic cart, manual. Min bid:
10.00
1010 tape drive, many games (inquire), manual Min bid:
5.00
1050 disk drive, many antic and analog mag disks Min bid:
10.00
1050 disk drive, other games, (rare?) KLONE chip for
extra speed Min bid: 11.00
1027 printer, manual Min bid: 5.00
Extra I/O cables Min bid: 1.00 ea.
Commodore

Commodore 128 comp, no manual, two
Fisher Price games non-orig. joysticks Min
bid: 20.00
1571 disk drive, I/O cable, MANY games (copies and
originals) Min bid: 10.00

Nintendo Entertainment System:

"GAME CONVERTER" Fam=>NES, has ribbon Min bid: 10.00
"72-60 PINS T89 CARTRIDGE CONVERTER"
Fam=>NES, has ribbon Min bid: 10.00
Castlevania, box, inst.
Joust, box, foam piece
Street Fighter 2010, video store box, inst
Donkey Kong Classics, loose Min bid: 5.00 ea.

Famicom:

Batman, do not know if orig. lable or not Min
bid: 5.00

TRS-80:

TRS-80 Color Computer 1
TRS-80 Color Computer 2 Min bid: 5.00 ea.

Email all bids to: cbel@istar.ca or calbrown@geocities.com

Just order the ANTIC PAL from BEST Electronics and pop it in.
It fools the computer in thinking its a PAL system. The PAL OS is not needed.
I run 99% all Pal software with just the ANTIC PAL

David and Gareth,
Actually, AtariSoft was a seperate division of Atari that wrote games
and some other stuff for a variety of Platforms, not just Atari
hardware.

4106. Announcing Ramdrive v1.0

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-09 00:00:00 UTC
From: rje@co.umist.ac.uk
Message-ID: <RJE.97Dec9153254@co.umist.ac.uk>
Source record: 68026

Well here it is!

For all of those who are interested Ramdrive 1.0 is
a new ramdisk for XL and XE's. It works under most DOS's including
2.0, 2.5, 3.0, MYDOS 4.50 and 4.53/4, and possibly others (although I
haven't tested it, but you're welcome to try it). It does use the RAM
under the OS ROMs for its own purposes which means that it won't work
with anything else that also does the same, such as most versions of
SpartaDos, (although it might work under SpartaDos X - anyone willing to
try it?), DOS XE, Turbo Basic XL and others. It will work with the OS
B translator disks however.

Support is included for an 8k ramdrive using the RAM under the BASIC ROM, a 64K
ramdrive (499 sectors, for standard 130XE 128K machines), a 256K
ramdrive (for 320K machines), a 512K ramdrive (for 576K machines) and a
1Meg ramdrive (for 1088K machines). However other memory sizes can be
accomodated by creating the corresponding configuration files. The
upper limit is set by the fact that only one bank switching address is used
(see below), although I have plans to use 2 addresses (and hence
bigger ramdrives) in version 1.1. Also there are a couple of
configuration files allowing you to play Zork I from a ramdrive (at
least 256K needed).

You can have up to 10 ramdrives at any one time, although 9 ramdrives
and 1 real drive would probably be the practical upper limit.
Ramdrives behave almost like standard drives, and can be configured for
single, enhanced and double density, single or double sided, as well
as more exotic configurations, such as 512 byte sectors and 1024 byte
sectors, and anywhere up to 256 sides. The maximum number of sectors
on a ramdrive is 65535.

Ramdrives are assigned a drive number in the standard way (i.e. D4:,
D7: , etc.) and both real drives and ramdrives can be renumbered at a
keypress, so your ramdrive can become D1: and your real drive D8:
without having to change the switches on the back of your real drive.

You can also both warmstart and coldstart at a keypress and retain
your ramdrives.

Non-standard memory expansions can also be used, 1,2,4,8,16 and 32K
memory banks are catered for, appearing anywhere in the RAM address
space, and using any address for bank switching (defaults to 54017 PORTB).

I hope to upload an .arc file with all this to the umich archive soon,
but for the time being it's available on my web page:

http://www.co.umist.ac.uk/~rje/8bit/ramd.html

So go take a look and tell me what you think, suggestions, comments, bug reports, etc. are all welcome. You can e-mail me at:

rje at co dot umist dot ac dot uk

4107. Re: Keep the Demos Coming!!!!

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-09 00:00:00 UTC
From: Curt Vendel <webmaster@atari.nu>
Message-ID: <348D7169.BC001DCC@atari.nu>
Source record: 68027

I would love to support these wonderful programmers, how about posting their website URL's so that other people can experience and appreciate their work.

Curt

4108. Re: Atari Trakballs: $1.95 each

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-09 00:00:00 UTC
From: Curt Vendel <webmaster@atari.nu>
Message-ID: <348D7305.659C297D@atari.nu>
Source record: 68028
Cross-posted to: comp.sys.atari.8bit,rec.games.video.atari,rec.games.video.classic,rec.games.video

What would be your choice? Either the URL gets posted and everyone who views the newsgroups gets a chance at picking up one or more of them or the site stays a secret and only one person knows about it and snatches them all up anyway without anyone getting a chance. The whole idea of the newsgroups is a sharing of information to help better our using of whatever subject the newsgroup covers, in this case this group covers Video Games, so to hold back information like this would mean that you might as well throw your modem out and sit home by yourself with no contact and no clue as to what is going on around the world, so don't knock the fact that a URL is posted for a place that is selling an Atari item for dirt cheap prices, as for your comment about the Jag controllers, well if the info had been posted on the net and enough people called at once, everyone would have a few Jag controllers instead of Cwest or United Games or VGLQ or whoever bought them all up, so stop complaining and pickup the phone and place an order!

> > thanks...

Haunt thrift stores, that's where I found my copy. (and no, I'm not
willing to part with it, sorry)

4110. Reinhard's Rarities Auction 12-08-97 LAST UPDATE

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-09 00:00:00 UTC
From: rpribish@wheel.dcn.davis.ca.us
Message-ID: <66k0bnfl1@mark.ucdavis.edu>
Source record: 68030
Cross-posted to: rec.games.video.classic,rec.games.video.marketplace,alt.atari.2600,rec.games.video.atari,comp.sys.atari.8bit

```
THIS IS THE LAST NEWSGROUP UPDATE!
E-MAIL ME TO BID OR BE PLACED ON THE UPDATE LIST!

Welcome to yet another Reinhard's Rarities Auction!
I have the following stuff available in my current auction.
I'm looking to trade for Atari 2600 and Atari 400/800 carts ONLY!

You can find a list of what I already have on my Atari 2600 pages at:

http://www.pribish.com/atari.html

I'm looking for Atari 2600 and Atari 400/800 stuff not on my list,
so please e-mail me with any trade offers. There are only a few
rules to help speed this along...

1) Don't bid unless you plan to buy
2) I reserve the right to trade or pull any item

Increments: $1: Amounts from $1 to $20
$2: Amounts from $21 to $40
$3: Amounts from $41 to $60
$5: Amounts over $60

I'd prefer payment of a U.S. Postal Money Order, available at the post
office for 85 cents, and will ship the day or day after the M.O. arrives.
Items will be sent 2 weeks after payment by check to ensure the check
clears. Buyer pays shipping, which is $3 flat for any number of carts,
shipped within Canada/US. The shipping on systems, controllers, etc. or
for winners in overseas destinations will be the exact shipping cost.

This auction will run until Monday, December 8, 1997 and
switch to an e-mail only 24-hour Once-Twice-Sold format.

You can get an up-to-the-minute auction update before you bid at:

http://www.pribish.com/auction.txt

Thanks, Reinhard

4111. trackball

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-09 00:00:00 UTC
From: Phil Costantinou <pcostantinou@icthomasson.com>
Message-ID: <01bd04d5$757e5280$059c41cf@pconstantinou.isdn.net>
Source record: 68031

I've got an Atari CX22 trackball that I bought for a C-64 several years ago
that I would like to use with
my IBM compatible; it would be great for my kids to use rather than the
difficult to grasp and
operate mouse.

Has anyone ever tried connecting the trackball to the PC serial port, and
if so, are there any instructions or
drivers available to interface with it?

Please reply to me at adillon@icthomasson.com

Thanks for any and all help.

Phil Costantinou

4112. RAM expansion

Hello,

I have a 130XE and an 800XL (both stock), and wanted to up the memory on one or both. Can anybody tell me what's around today (kits, or if not a kit, are there tried and tested do-it-yourself/someone does it for you upgrades etc.) that would let me upgrade either one.

Thanks
Jay Yepuri

Hi,

In article <19971209060400.BAA08030@ladder01.news.aol.com>, guy1015@aol.com says...

>Just order the ANTIC PAL from BEST Electronics and pop it in.
>It fools the computer in thinking its a PAL system. The PAL OS is not needed.
>I run 99% all Pal software with just the ANTIC PAL

I'm now big interested in ANTIC PAL to see any PAL version demos for atari.
I now have NTSC verison 130xe and all chips are soldered without sockets.
Is it easy to replace NTSC ANTIC to PAL verison one?

--
Tetsuo Oda

You must order the $12.00 PAL Antic chip from best, It has the refreash line that the 130xe needs. You must desolder the old antic then solder in a 40 pin socket, then pop in the chip.
afterwords... Just boot up the JOYRIDE demos or any other Polish demo and sit back and enjoy..

NOTE: You must have a Monitor that will display PAL, Use the Commodore 1902a, or any Magnavox monitor.

Somewhere in the dusty vaults, I have a set of text files--in
atascii!--describing number of such upgrades, if you can find such small
chips! I'm looking for some using 1meg x 8-bit SIMMs!

December Auction - Update 12

Auction Rules:

-In case of ties, the first bid received is the bid accepted.

-Auction will continue through Monday, December 15, 10:00pm central time. After that date, bidding will continue on any items which have received a bid within the last 24 hours. Anyone may bid on an item that is still receiving bids. Minimum bid increment may be increased after the auction deadline.

At the deadline, items will be marked sold immediately if they had no bids in the last 24 hours. For
example, a cartridge that received a bid at the beginning of the action will be marked sold at the deadline
unless a higher bid is received within 24 hours before the deadline.

-Not accepting trades at this time.

-If you bid, you are expected to buy. Payment is by check or money order in U.S. Funds. No CODs. Allow 10 business days for checks to clear.

-If you have a U.S. address (except Alaska or Hawaii), total shipping and handling is $3.95 for any number of cartridges/manuals/magazines; $6.95 if package includes systems, modules, hardware, or more than 2 books. I'll pay any difference. Some items require actual shipping, if stated.

-Place a bid by item number and description. Your first bid must include your name, address, and phone.
If you would like to remain anonymous, please include a substitute name with each bid.

-Minimum starting bids are listed. Minimum bid increment is .50 on items under $3, $1 on items $3-
$9.99, $2 for items $10-29.99, and $5 for all others.

-Instructions and box are only included if stated. New in box is new, but not necessarily sealed. Complete
in box contains instructions and is used.

-Send all bids to ClassicAuc@aol.com.

Atari 8-Bit Computer Accessories
A1. Panasonic KX-P1092 Epson Compatible Dot Matrix Printer. Includes 2 ribbons (installed and extra unopened)/Operating Instructions manual (includes codes, charts, type-in BASIC examples). After much searching, I just picked up this book, plus Inside Atari DOS
(which has the DOS 2.0 listings) and 11 other books for $20+shipping at
eBay. No, I'm not willing to part with it. sorry. I do have some other
books that are duplicates: See http://www.angelfire.com/tn/squirrels

Another possibility is to try Amazon (http://www.amazon.com)... They will
make an effort to find pretty much any old book you want. No guarantees
they'll find it, though.

I think that if you've got $1.2 million dollars to purchase all of O'Shea's stock, then you're probably smart enough to realize that if O'Shea hasn't sold out of games in over a year (at 80 cents apiece!) then you'll be waiting a while to cash in on the entire lot at $2.00 apiece.

I'm just wondering how much O'Shea paid for the entire lot...

-Joe

4122. ICD Web page?

There's a web page for ICD, http://www.icd.com, and they claim to support 8-bit stuff on it. I know previous calls have left me in the dark with them, but maybe they're serious through email? Has anyone had any luck dealing with them?

I E-mailed ICD three weeks ago after seeing Rambo-XL memory upgrades
offered at thier site for $14.95 each.

Thomas Harker E-mailed me back to say that they had all been sold to one
person two months earlier, but he also said they were considering making
some more SpartaDOS X cartridges. I wish!!

I later got a Rambo-XL from Best Electronics, but it was alot more
expensive. Still, I think it was worth it to upgrade my 1200XL to 256Kb.

Graham.

Do you mean a real PAL-compatible monitor, or just a monitor that will show NTSC at 50Hz?

Surely just changing the ANTIC chip doesn't change the whole colour-encoding mechanism of the computer, or does it??

I thought the Nir Dary upgrade was an inexpensive way of fixing a timing problem that manifested itself on certain timing-critical software including many of the East European demos. I didn't realise it changed the whole colour encoding system too.

Graham.

Just how difficult is the Rambo XL upgrade? Can a novice handle it?
Are the instructions clear? I've seen the plans for a couple of
upgrades on the ?British Undergound? page, but I can't make any sense of
them.

Thanks
Eric

4128. Help a newbie

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-10 00:00:00 UTC
From: cmv@shmooze.net
Message-ID: <66mqo4$q1k$1@newsbell.bellglobal.com>
Source record: 67964

I'm thinking of digging out my 130XE and turning it into a functional computer again (play some old games, and maybe write an e-mail client).

So, a couple of questions:

1. Can I get a hard-drive for the 130XE? I've seen talk of IDE interfaces, but no information on how to build them. Didn't Atari make a hard-drive? If so, what was the model number so I can maybe track one down.

2. I'll probably need to pick up a cheap, external modem (I'm guessing the 300 baud Atari one I have isn't going to cut it).

3. Is there a good archive of internet software for the XE?

Thanks, and feel free to email me you're replies directly.

>

Eric,

For 1200XL owners, the Rambo-XL upgrade is as follows: (this is from memory and is listed to offer a rough guide of how complex installation is. It should not be used as an alternative to the actual installation instructions supplied by ICD with the product :))

* Remove all eight of the 64K DRAMs and replace them with 256K ones (not supplied).

* Remove the memory decoder chip in U10 and replace it with the small Rambo-XL circuit board supplied.

* Remove the PIA chip and bend up pins 12 thru 16. Re-insert the chip and solder the ribbon cable from the small Rambo-XL circuit board to the bent up pins.

* Bend up one pin of the chip in U7. Solder a jumper from A-pad on the Rambo-XL to this bent-up pin.

Two more jumpers must be added from pads B and D of the Rambo-XL to points on the motherboard.

If your machine has an older ANTIC chip, you will also need to solder a jumper from pad-C on the Rambo-XL to one of the pins on the the ANTIC chip. On the 1200 there is actually a pad just next to the chip seat where this jumper can be placed but you will need to remove the chip first. Don't forget to put the chip back like I did!

Overall the installation was quite straight forward and the instructions were easy to follow. I used a simple and cheap soldering iron and a solder-sucker so that I could feed the jumpers through the pads to make the connections more secure. The only problem I had was soldering the ribbon cable onto the pins of the PIA chip. I had to use a small crocodile clip to hold the cable in place whilst I added the solder, but I am no expert when it comes to soldering. I have managed Bob Wolley's 1200XL video and operating system upgrades too, but I waited until I had obtained a second

motherboard before risking it.

The only complaint I have about the Rambo-XL is that ICD don't supply the jumpers. If you have a 1200XL then you can shorten the ribbon cable and use some of that, but the 800XL looks like it needs the full lenght of the ribbon cable to reach from the memory decoder to the PIA chip. I don't know if the 800XL installation is any more tricky, but I doubt it.

Note that the Rambo-XL only provides 130XE compatibility in CPU mode. The ANTIC chip still cannot address a seperate bank of memory from the CPU, so games like T-34 still don't work right. For 1200XL owners, installing the Rambo-XL also means that the LEDs dont work anymore :(- and now I need to wait about 7 or 8 seconds before re-powering the unit, as the memory chips take longer to reset.

Graham.

I thought they sold the rights to this stuff to Fte? I recall someone
posting they had purchased a SDX upgrade from FTE before they/he
disappeared.

Now im really confused.

Almost, the joystick routines are modified for the 5200, and if they were keyboard dependent they were fixed for non-keyboard 5200s as well...

With the Atari 8-bits, one buzz means press play only, that is, it's read-only.
If the Atari buzzes twice, it means press both play and record, so you can
write to it.

4139. Memory Chips

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-11 00:00:00 UTC
From: "Jay N. Yepuri" <jnyepuz1@homer.louisville.edu>
Message-ID: <34907F4D.2E0E@homer.louisville.edu>
Source record: 67836

Hello,

To all those with hardware expertise, a two part question (please read both parts) 8-).

1. Are the RAM chips in a stock 130xe or stock 800xl socketed, or does it vary?

2. I've recently been chopping apart an old 8 Mhz 286 Tandy clone I had laying around. Anyway, on the left hand side of the motherboard (facing the CPU), near the expansion slots, are 20 sockets, 16 of which are filled with chips. I'm assuming these are RAM chips. Given that the computer has 640k total, I'm assuming these are 40k each? That is, if I'm even looking at RAM. I've never heard of 40k RAM chips.

The chips are 16 pin, and on each chip iteself is an American flag and "(c) MT, 8737 B USA, 1259-15". I obviously have no idea if this designation means anything, but thought it might help.

What I'm wondering is, if these are in fact RAM chips, is it possible take these from the old Tandy and put them into my 130xe or 800xl? If the RAM in the Ataris were socketed, would it be as simple as replacing the chips? And if the A8bit RAMs were not socketed, could the RAM from the Tandy be at all applied to a hacked/soldering-involved RAM upgrade of one or the other 8bit?

Sorry for the long question.

Jay Yepuri

I can think of one simple explanation. If Mike Hohan (FTE) financed the purchase with ICD, then missed his payments, the rights would revert back to ICD.

Still confused?

Uh... I think Chris means APE, as in Atari Peripheral Emulator, a hardware/software systems allowing an Atari 8-bit to utilize the hard drive and peripherals of a connected PC-compatible. Here is the APE homepage:

http://seka.nacs.net/~classics/

FYI, the abbreviation for Atari Program Exchange was "APX".

As for adding a hard drive, check out the Hardware Upgrade, Modification and Add-On FAQ:

http://www.geocities.com/SunsetStrip/Alley/1878/hard_faq.htm

4151. Re: Dir Nary PAL-NTSC Upgrade

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-11 00:00:00 UTC
From: Richard Atkinson <rga24@hermes.cam.ac.uk>
Message-ID: <348F382E.1359@hermes.cam.ac.uk>
Source record: 67972

> > NOTE: You must have a Monitor that will display PAL, Use the Commodore
> > 1902a, or any Magnavox monitor.
>
> Do you mean a real PAL-compatible monitor, or just a monitor that will show
> NTSC at 50Hz?

The latter; swapping the NTSC Antic for a PAL Antic generates 50Hz
images, but still with the 3.58MHz NTSC colour encoding system, the NTSC
colours (ie. colour $1 not the same as colour $F) and the possibility of
using artifacting.

> Surely just changing the ANTIC chip doesn't change the whole
> colour-encoding mechanism of the computer, or does it??

No, GTIA handles all that.

> I thought the Nir Dary upgrade was an inexpensive way of fixing a timing
> problem that manifested itself on certain timing-critical software
> including many of the East European demos. I didn't realise it changed the
> whole colour encoding system too.

The colour is still NTSC. Hence, on my 1200XL (when it arrives), I am
planning to swap the GTIA for a PAL GTIA and maybe swap the Antic also,
but either way I will have a 1200XL that can be viewed on a PAL monitor
in colour. Of course, I'll also have to sort out the 3.58MHz / 4.43MHz
colour crystal problem - any suggestions?

Me too. Us UK 8-bitters should have a seperate mini-newsgroup for
discussing trades, etc. Who has a 1200XL they don't want anymore?

> have heard rumours of people out there who do this

You can use a little programm called XL-DeeJay for this. Unfortunately you have to do some soldering inside your falcon because the falcon's RS232C isn't 100% compatible to the MFP driven serial port of the ST. If you own a ST too you won't have to do any soldering.

Another method would be to build a pseudo RS232C in your atari XL and use a comms programm on both your 8 Bit and Falcon. I used to do this on my systems with CoNnect (on the F030) and BobTerm on the XL. For me it works. ;-)

I've got an Atari CX22 trackball that I bought for a C-64 several years ago
that I would like to use with
my IBM compatible; it would be great for my kids to use rather than the
difficult to grasp and
operate mouse.

Has anyone ever tried connecting the trackball to the PC serial port, and
if so, are there any instructions or
drivers available to interface with it?

Please reply to me at adillon@icthomasson.com

Thanks for any and all help.

Phil Costantinou

The trakball either works in joystick mode, where it returns a byte
made up out of number of status bits (buttons 1 + 2, left, right,
up, down), or trakball mode, where it returns 2 button mode bits and
2 analog axis vales. The last case is not unlike the PC joystick.
Never tried this, the trakball plug does not fit in the PC game port.
The serial port is not an option as the trakball does not return
serial data.

>
>Now im really confused.

Yeah, that really doesn't make much sense. (I'm an owner of SDX 4.22,
purchased direct from FTe in late '95.)

I guess it's conceivable that ICD sold FTe the right to produce & develop
SDX, without giving up their own right to produce more themselves...
Someone'd have to email Thomas Harker/ICD back to clarify, as very few
people know how to reach Mike/FTe (I'm not one of them, so don't ask me
how!).

Did you press Return? Unlike the C-64, the Atari has no way of knowing
when you press record or play on the tape drive.

From: Robert Hagenstr&#65533;m <rob@ksk.sala.se>
Message-ID: <01bd067e$205306c0$922611c2@freja>
Source record: 67981

Greetings!

I just had a craving for some old Atari 8-bit games, and since my own Atari is in the garage in a box somewhere, I thought I should try the web and see what it could come up with!

To my joy, there were hundreds of Atari 8-bit pages, with hundreds of links...

To my misery, none of the pages had been updated for years and 90% of the links were out-dated (even to my site, so I had to put back my "we've moved" sign even though it had been up for about 6 months...).

Anyway, is there anyone out there who has a clue to where I can find Montezuma's Revenge on a disk image, .ATR pherhaps? Rescue on Fractulus and The Eidolon would also be nice... (and yes, I do own these games, I can flippin scan the box art and manuals if you want proof!)

Yours Sincerely, Robert Hagenstr&#65533;m

Maybe next time you decide to post, you can spend a little more time being intelligent and less time being witty and not continue to spam the newsgroup by forwarding the entire message back.

December Auction - Update 14

Auction Rules:

-In case of ties, the first bid received is the bid accepted.

-Auction will continue through Monday, December 15, 10:00pm central time. After that date, bidding will continue on any items which have received a bid within the last 24 hours. Anyone may bid on an item that is still receiving bids. Minimum bid increment may be increased after the auction deadline.

At the deadline, items will be marked sold immediately if they had no bids in the last 24 hours. For
example, a cartridge that received a bid at the beginning of the action will be marked sold at the deadline
unless a higher bid is received within 24 hours before the deadline.

-Not accepting trades at this time.

-If you bid, you are expected to buy. Payment is by check or money order in U.S. Funds. No CODs. Allow 10 business days for checks to clear.

-If you have a U.S. address (except Alaska or Hawaii), total shipping and handling is $3.95 for any number of cartridges/manuals/magazines; $6.95 if package includes systems, modules, hardware, or more than 2 books. I'll pay any difference. Some items require actual shipping, if stated.

-Place a bid by item number and description. Your first bid must include your name, address, and phone.
If you would like to remain anonymous, please include a substitute name with each bid.

-Minimum starting bids are listed. Minimum bid increment is .50 on items under $3, $1 on items $3-
$9.99, $2 for items $10-29.99, and $5 for all others.

-Instructions and box are only included if stated. New in box is new, but not necessarily sealed. Complete
in box contains instructions and is used.

-Send all bids to ClassicAuc@aol.com.

Atari 8-Bit Computer Accessories
A1. Panasonic KX-P1092 Epson Compatible Dot Matrix Printer. Includes 2 ribbons (installed and extra unopened)/Operating Instructions manual (includes codes, charts, type-in BASIC examples). Without paper separator (wire rack). Supports near letter quality print. Handles friction feed or fan-fold paper. Very nice condition. Works well with Atari 850 Interface. Actual shipping added. -$19.95

semslie

A2. Atari 850 to Centronics Printer Cable. Works with above and other dot matrix printers. -$8.95 semslie

A3. Atari Dealer Demo Cartridge. 16K Dealer Demo in Centipede Case. Self-running. Shows advanced capabilities. Well executed programming tricks. Begins with multicolor Atari Logo with all colors displayed at once. Includes Household management, Recordkeeping (animated pencil), Home Entertainment (shows Star Raiders with different style tie-fighter), Investment Analysis, and Service Centers (draws U.S. map). Extremely rare. -$35 grabben

A4. AtariWriter Cartridge. Includes 50 page spiral bound manual, Quick Reference Card, and Helpful Hints fold-out card. -$7.95 min

A5. Atari Assembler Editor Cartridge CXL4003. With 79 page User's Manual and Programmer's Reference Card. -$8.95 min

A5a. Koala Pad. Includes Koala Pad touch tablet, stylus, Micro Illustrator and Touch Tablet Owners Manual. Very Rare. No Disks. -$8.95 min

I haven't heard of such a thing done, but it would require a lot of
added circuitry rather than just swapping CPU's. For one thing, you
need to find a 20MHz clock. For another, as near as I can tell there
are a few pins which are not directly compatible (see
http://www.wdesignc.com/chips/816s4.jpg vs.
http://www.xmission.com/~trevin/atari/6502_pinout.html). I believe
Atari made one or two customizations to their production of Sally that
wouldn't be in the stock 65816.

If you don't find anyone willing to part with an Action cart, I think B&C Computervisions still sells them. I know they have manuals. They are at www.myatari.com on the web. BTW, if you don't already have it, the Action Toolkit might help. Also, B&C sells PD disks with Action source files too.

Phil, the Atari trackball, though using a DB9 connector (just like all
other Atari8 controllers) is not a "serial" device. I believe it is
an analog device and interfacing it to the PC serial would be quite a
project and would require someone who is skilled in
electronics/electrical engineering to design the interface. Since
there are numerous trackballs available as substitutes for the mouse
for the PC, varying in styles, features,quality and price, my advice
to you is to simply shop for a track ball designed for the PC.

*** Please make sure responses are also sent via email.

It is a "digital" device. More similar to a PC bus mouse than a
serial mouse. The Atari tracball isn't especially nice compared
to more modern equipment for today's computers. It is probably
more trouble than it is worth to get the Atari tracball to work
on a PS.

(Though I would really like it if I could get the kensington Orbit
trakball to work on the Atari.)

Well, I wrote such a utility. The problem is that most modern PC disk
controllers won't write single-density (FM) disks, so disks for stock
1050s are out of the question. Writing double-density (MFM) disks for the
XF551 is easier, although 360K DD drives are preferable (as compared to
1.2 MB HD drives). I'll see if I can dig up my old code, if you have a DD
drive handy.

Yes, a few such upgrades exist. The Turbo-816 and Sweet-16 spring to mind.

> realize that the system wouldn't be a true 16bit, given all the other
> components that would need to be capable of operating at that rate, but
> I figure (and I'm probably completely wrong) that it's got to be a
> little faster?

Well, "true 16-bit" is a pretty meaningless term... The 65816 is a hybrid
8/16 chip.

Sorry, I had bad MIME types set up in the server config.

Try the .exe files again and let me know what happens.

For what it's worth, I would like to find someone to port the .lzo
compression stuff to the 8-bit and hopefully make the same program handle
both file and disk decompression...

The name of the file is stored within the .lzo, so it could check if it was
.atr or .xfd and tell you 'insert a blank disk and hit return' instead of
producing it as a file.

Any people up to taking the task?

Jason

DARK9ROOM schrieb am Mittwoch in COMP/SYS/ATARI/8BIT :

D> Anyone know of an Atari 1400XL for sale, or have one for sale...please let
D> me know!

The 1450XLD would have been a great follow-up to the XL-series. For the first time Freddy was implemted, which Atari later used in their 130XE. There was also a 300Baud-Modem, a speech-synthesizer and a new parallel 360kB (up to 100kB per second)-discdrive inplented. I have a picture of a XLD here, it looks very functional. But unfortunately this was another great system that never seemed to get released :(
Let me know, if you are able to find a prototype, please.

BTW: I'm still searching for a 65XEM-prototype ... but that's another pearl I won't be able to find in this lifetime ;)

I would like to trade these for cartridge games, or other Classic
stuff. If I don't get any trade offers then I am just going to list
these on ebay, but I thought I would see if I can try to swap them
first. I collect for most Classic systems. Will listen to any offers.

Classic Computer & Game Books for Trade

HOW TO MASTER THE VIDEO GAMES, by Tom Hirschfeld
1981 Bantam, Softcover, 177 pages, Very Good condition.

MASTERING PAC-MAN, by Ken Uston
1981 Signet, Softcover, 128 pages.
The cover is worn, the contents are fine.

THE CREATIVE ATARI by Small, Small, and Blank
1983 Creative Computing Press, Softcover, 243 pages
This is a former librbary book. It is in very good condition.

Dr.C.WACKO'S MIRACLE GUIDE TO DESIGNING AND PROGRAMMING YOUR
OWN ATARI COMPUTER ARCADE GAMES, by Heller, Johnson, & Kurcina
1983 Addison-Wesely Publishing, Softcover, 235 pages
This is a former librbary book. Very Good condition.

BASIC PROGRAMS FOR THE ATARI 600XL & 800XL, by Knight
1984 Tab Books, Softcover, 120 pages.
This is a former library book. Excellent condition.

ATARI 1040ST COMPUTER OWNER'S MANUAL
Softcover, 85 pages, Excellent condition.

10 STARTER PROGRAMS FROM FAMILY COMPUTING, by Latimer
1983 Scholastic Inc., Softcover, 80 pages
This book contains 10 programs in BASIC for each of the
following systems: Apple, Atari 400/800, Commodore 64
and VIC-20, TI99/4a, Timex, TRS-80.

THE TIMEX/SINCLAIR 1000 BASIC HANDBOOK, by Hergert
1983 Sybex, Softcover, 164 pages, Excellent condition.

USING THE TRS-80 IN YOUR HOME, by Sternberg
BASIC Computer Programs for the Home, For 16K Level II TRS-80 Model I
Softcover, 330 pages, Excellent condition.

GETTING STARTED WITH COLOR BASIC (TRS-80 CoCo)
Softcover, 308 pages
The back cover of the book is removed, there is some tape on the
spine/front cover. Contents are fine.

GOING AHEAD WITH EXTENDED COLOR BASIC (TRS-80 CoCo)
1981 Tandy Co., Softcover, 215 pages. Average used condition.

COMMODORE 64 ADVENTURES, by Grace
A Guide To Playing And Writing Adventures
1984, Softcover, 233 pages, Excellent Condition.

35 AMAZING GAMES FOR YOUR COMMODORE 64, by Mihalik
1984, Softcover, 120 pages
This is a former library book. Decent used condition.

WORDPRO 3 PLUS/64, by Professional Software Inc.
1983, Softcover. This is a complete User's Manual for the
WordPro 3 Plus/64 word processing program for the Commodore 64.

YOUR FIRST COMMODORE 64 PROGRAM, by Zaks
1984 Sybex Inc., Softcover, 189 pages, Excellent condition.

YOUR SECOND COMMODORE 64 PROGRAM, by Lippman
1984 Sybex Inc., Softcover, 225 pages, Excellent condition.

COMPUTE'S MACHINE LANGUAGE ROUTINES FOR THE COMMODORE 64
1983, Spiral-bound softcover, 255 pages, Excellent condition.

APPLE II REFERENCE MANUAL, 1981 Apple Computer
Spiral-bound, 195 pages, Excellent condition.

THE APPLESOFT TUTORIAL, 1981 Apple Computer
Spiral-bound, 156 pages, Excellent condition.

PROGRAMMING YOUR APPLE II COMPUTER, by Bryan
1982 Tab Books, Softcover, 288 pages, Excellent condition.

I haven't tried this but:
PC mice are inexpensive (you can get a cheap one for under $10)
Most mice and trackballs use the same type of sensors
Therefore: it might be possible to use an Atari trackball mechanism with the
circuit board from a PC mouse.

I am new to the Internet, old to Atari 8-bit. I don't know if you got an answer to this ever, but when the Atari beeps twice, it is ready to record. To trigger the recording process, you simply have to press Play & record on the tape recorder, and then press the -Return- key on the Atari. Also, in answer to your question about the two ports on the Atari 1010; they are the same, just as with a disk drive. The fact that the old 410 had to be the end of the daisy chain brought on the development in the 1010 of being able to daisy chain the tape drive just like a disk drive.

Never seen a 130XE that was socketed. Most early 800XL's are, but the
late production units were all soldered in.

You probably have 2 banks of 256k 1x rams, 9 each. (18 total) to make
512k + parity, and 2 banks of 64k 1x rams (18 total) to add anohter
128k + parity. This was the most common 640k configuration on XT 640k boards.

The 1x 256k chips are the oles you need for 256k upgrades. You need to add
more circuitry to get the full 256k, there are text files detailing
the upgrades available on the net.

I read somewhere that the most basic versions of some of these archive programs could run on different platforms. I mean the same code could literally run on different platforms. Maybe we could hunt down the original MSDOS zip program and just run it on the 8bit.

I would like to have a GIF decoder for my newly acquired Atari 800 that would dither down a modern GIF all the way to grayscale 16, or graphics mode 8, monotone.

Tandy's are strange things. The 286 is an AT class machine. If only 16
sockets are being used and the system has at most 640, you probably have
two banks of 256K for 512K total. The mother board probably has another bank
somewhere with 16 64's for 128K. Then again this could all be wrong if you
actually have 1meg.

4189. XL OS Source Code available?

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-13 00:00:00 UTC
From: kheller2@ix.netcom.com
Message-ID: <66ud6i$fbr@sjx-ixn1.ix.netcom.com>
Source record: 67875

I havn't called BEST or B&C yet, but I figured I would ask here first.
I read somewhere, and I'm very upset that I can't find "where" is, that Atari
did produce a full source listing of the XL os akin to the Rev B OS style in
the Tech Ref Notes. The only three books I've been reading of late are
"Inside Atari Dos", "Mapping The Atari Revised Edition", and "Phoenix: The
Fall and Rise of Video Games 2nd Edition".

I'll see if I can find the page where I read it. But has anyone else heard
about this?

Karl

This is mentioned in 'Mapping the Atari: Revised Edition' in appendix 12:
"Atari did produce a listed source code for the XL OS, although for
some reason it was never published for public sale as it was intended.
It may be available now through Atari--write and ask for it. It is an
excellent 500+ page resource document."

I would really like to get my hands on this document. I've disassembled
the OS with another program, but I'm still missing the comments.

The XL OS source would make an excellent on-line reference, but short of
that, I'm going to try to comment the source and put it online myself.

The long and short of this is that MSDOS programs won't run on Atari 8-bits.
You'd have to take the source, recompile it, and produce an 8-bit binary.

In addition, the main reason .zip hasn't been ported yet is that it requires
data structures with a minimum of 48k for most of the decompression and in
most cases, more.

This is obviously out and out impossible on a stock 800XL and
a pain to program on a 130XE.

Now if we take a look back at LZO, we see that it requires no memory for
decompression and we can use the PC or Unix machines to do the compression
which requires 64K.

Apparently. This is no huge ng but there is anywhere from 10 to
50 news messages per day from my 3 different new source
perspective. @home, primenet, and ASU.edu. Zippo and Supernews
are probably better than any of these. If you really what to
check, try www.dejanews and put this group name in the blank.

I did the exact same thing, and in fact that's exactly why I'm here,
looking for some of those great old ROMs to run with these wonderful
emulators I'm coming up with (it's so frustrating to have a good
emulator and nothing to run on it).

Jason, thanks for the link to get us started. But you only have a few
ROMs there (not that I'm not grateful for those; Fractulus was an
all-time favorite of mine). Does anybody have, say, ALL the ROMs? ;)

Tell you guys what: if I get a ton of ROMs, I'll put them up on *my*
web site, since no one else on the Net seems to have them up. I have a
section of my site that's dedicated to computer links, with a special
section on emulation in particular. If I get enough Atari 8-bit ROMs to
make a small library online, I'll do it. I have unlimited storage space
and unlimited bandwidth, so it wouldn't be any problem for me to
maintain an archive. Problem is, I don't have the ROMs to make an
archive with. So, if you have your own library of ROMs, please contact
me (don't just send the ROMs; somebody else may already have sent
them). I will, of course, be happy to give credit where deserved.

Mike, itching to play some of those old Atari games again. And yes, I
do own 50+ cartridges myself.

1) At the risk of being pedantic, most of the games were disk-based, thus
not making them "ROMs".

2) The closest thing to 'all' of the games available is Yogi's Jellystone
Park at ftp://ftp.hackerz.com/.

for a 320K 130XE with a Gumby modification (whatever that is).
If anyone has one for sale, please let me know.
Has anyone ever heard of a Gumby modification?

4198. 810 disk drive, problem

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-13 00:00:00 UTC
From: dan <dalabast@sprynet.com>
Message-ID: <349279AC.1D30@sprynet.com>
Source record: 67884

hi,

Hi I've got a major problem with my 810 disk drive. Situation: i turned it on (with the correct power supply connected, and the power supply working) the drive light turned on for about 1 second, then the drive went dead. turned it off and on. no light the second time. checked the power supply, it was fine. opened the drive and connected the power supply and tested (CR111) for correct voltage. As i tested i noticed the AC power level dropping, Removed the power supply, and retested the power supply. The power supply shorted out, i believe from the drive. I don't want to ruin another perfectly good power supply. has anybody, ever had a problem like this? Or could point me in the right direction? Is there a way to repair the power supply? Well I hope you guys could help. :)

thanks in advance,
danny

===============VINTAGE MICRO-COMPUTERS===============
============EMAIL: Vintage_Micro@yahoo.com============
**************************************************
```

Hi everyone,
I just wanted to thank everyone who has placed an order with me, this is really the only way I can afford to keep my hobby going, and sometimes help with a bill or two. It also warms my heart to see so many fathers buying games or machines for their children on Christmas. Lets bring in a new generation!

Next thing is that I am working on a little magazine for older computers(mostly commodore and atari but all others are welcome to) to help support users out there. There seems to be alot of support for older systems just not in one place. I want to do features and listings on web-sites, companies, individuals who support these older machines. I would like to have articles on hardware upgrades and modifications for these machines along with new and innovative software. I will also provide very low cost advertising for those who wish to sell their hardware/software new or used. I think I can publish it quarterly with no problems. The format will be simple and cost effective for me to produce, 8.5in by 11in pages folded in half(booklet form), and will hopefully have at least 16 pages. I have not figured out a price for this yet but more than likeley about $1 will pay for the printing and the postage. I will be taking submissions for articles right now. They can pretty much consist of anything(reviews, opinions, programming, hardware modifications, and most importantly getting these machines online.) All submissions will get proper credit! Also I am in need of a name for this mag, so please send in your ideas! Please send all submissions to:
Vintag_Micro@yahoo.com I hope something like this would be of interest to others.
Anything on this list I will accept trades for Amiga items. The proceeds enable me to further my beloved hobby and also help others who collect/use/love old micro-computers. Of course my main love and area of expertise is the C64. I am in the process of moving into the world of the Amiga.

You will notice that I am trying to be as detailed as possible about my listings. I am a collector and have been buying items online for a while and I really wish everyone would list in a detailed manner. It definately makes it easier on the customer, so that they can decide if said item is useful to them or not. I will also try to answer as many questions as I can about each item listed.

This list keeps expanding(so check it regularly or request to receive updates via email). I have alot of items to inventory, check and clean. Email me your orders and I will process them as fast as I can. To make the transaction faster, please email your address with your order, that way I can calculate shipping and give you a total. Also... if you wish to receive future lists by email, send me email with subscribe in the subject line.

Please enjoy and Happy Holidays to all!

======ATARI====ATARI====ATARI====ATARI====ATARI======
======ATARI====ATARI====ATARI====ATARI====ATARI======

**********ATARI 8 BIT SOFTWARE**********

TITLE: Ultima IV - Quest of the Avatar
PUBLISHER: Origin
REQUIREMENTS: Atari 400/800,XL's, XE's and a 5.25 in floppy drive.
NOTES: This is one of the best series of games that has been on just about every computer platform at one time or another. This game is considered to be rare. The box is intact, although one corner is slightly bent. Everthing is in the box except for the metal Ankh. The cloth map is pretty groovy just for hanging on your wall.
PRICE: Well this is the difficult part for me. I am honestly not sure if I want to sell this since the Ultima games are my very favorites, and also due to the fact that the game is so hard to find. If I get an offer that sounds good I will sell this or even possibly trade it for C64 or Amiga items.
So go ahead and make a bid.

TITLE: Atari Basic Cartridge (cxl4002)
PUBLISHER: Atari
REQUIREMENTS: Atari 400/800,XL's, XE's and an open cartridge slot.
NOTES: You need this to use Basic on most Atari 8 Bit Computers.
PRICE: $4

TITLE: Educational System master cartridge (cxl4001)
PUBLISHER: Atari
REQUIREMENTS: Atari 400/800,XL's, XE's and an open cartridge slot.
NOTES: The cartridge seems to be the operating system for some sort of school/institutional teaching system. Apparently there are supposed to be some tapes (data) with information on them to use in conjunction with this software. So this is just the cartridge, nothing else. This should be something for that 8 bit atari collector that thinks he has everything.
PRICE: $2

TITLE: Pac-Man (cxl4022)
PUBLISHER: Atari

REQUIREMENTS: Atari 400/800,XL's, XE's and an open cartridge slot.
NOTES: The arcade game of 1 hungry little spot with an aversion to
ghosts!
PRICE: $5.25

TITLE: Star Raiders (cxl4011)
PUBLISHER: Atari
REQUIREMENTS: Atari 400/800,XL's, XE's and an open cartridge slot.
NOTES: Space type arcade game
PRICE: $4

**********ATARI 2600 Game System**********

Old Style Console in Box with accessories
Power supply
RF Box
2 Joysticks
3 Cartridges (Combat, Asteriods, and Defender)
NOTES: This unit is very clean and works great!
PRICE: $25

**********ATARI 2600 CARTRIDGES**********

PUBLISHER: ----------Atari----------
TITLE: Asteroids PRICE:$1.50
TITLE: Bezerk (a Classic) PRICE:$4
TITLE: Combat PRICE:$1.50
TITLE: Defender PRICE:$1.50
TITLE: E.T the Extra-Terrestrial PRICE:$1.50
TITLE: Missle Command PRICE:$1.50
TITLE: Night Driver PRICE:$1.50
TITLE: Pac-Man PRICE:$1.50
TITLE: Space Invaders PRICE:$1.50
TITLE: Super Breakout PRICE:$1.50
TITLE: Yars Revenge PRICE:$3
PUBLISHER: --------Activision---------
TITLE: Laser Blast PRICE:$2
TITLE: Seaquest PRICE:$3.25
PUBLISHER: ----------Imagic----------
TITLE: Star Voyager PRICE:$3
PUBLISHER: -----Parker Brothers-------
TITLE: Q*bert PRICE:$3

**********ATARI 2600 ACESSORIES**********

ITEM: Keypad controller used in a few atari games
NOTES: This plugs into the joystick port of the 2600. This can
probably be used on any 8bit atari or 8 bit commodore computer with

some minor basic programming.
PRICE: $3

**********COMMODORE RELATED BOOKS**********

TITLE: Personal Computing on the VIC 20
PUBLISHER: Commodore Electronics, LTD.
Copyright 1982
164 Pages
Spiral Bound Softcover
PRICE: $4.00

TITLE: More Than 32 Basic Programs for the Commodore 64 Computer
PUBLISHER: Dilithium Press
Copyright 1983
328 Pages
Softcover
NOTES: This is just a fantastic book with many large type in programs
that include games, applications, educational programs, graphics,
math, and other misc. programs. Each program is broken down in a
fashion to illustrate what it does and why, also tells you how to make
modifications. This is a great way to learn how to code in basic on
your commodore 64 computer! Highly Recommended.
PRICE: $5.00

TITLE: Pilot
PUBLISHER: Commodore Electronics, LTD.
Copyright 1983
111 Pages
Softcover
NOTES: This is the manual for the Powerful authoring language Pilot.

The language Pilot was mainly used in learning institutions.
Unfortunately there is no software with this book, so if you are
missing the manual this book is for you!
PRICE: $1.00

TITLE: Teach Yourself Computer Programming with the Commodore 64
PUBLISHER: Hodder and Stoughton
Copyright 1983
206 Pages
Softcover
NOTES: This book is invaluable to the NOVICE programmer. It contains
many programs ready to be typed in. The book covers all basic aspects
of C64 programming.
PRICE: $4.00

TITLE: Commodore 1541 Disk Drive Users Guide
PUBLISHER: Commodore Business Machines Electronics, LTD.
Copyright September 1982
70 Pages
Softcover
NOTES: If you have a 1541 drive and do not have a manual then this
book is for you. You can reap the full benefits of your 1541 drive.
PRICE: $2.50

TITLE: Mastering the VIC 20
PUBLISHER: Ellis Horwood
Copyright 1983
173 Pages
Softcover
NOTES: This book explores the VIC 20 via advanced basic programming
techniques and assembly language programming. This book is invaluable
to the VIC programmer including many examples and tables.
PRICE: ON HOLD!

TITLE: VIC Graphics
PUBLISHER: Hayden Book Company, INC.
Copyright 1982
187 Pages
Softcover
NOTES: This book explores the use of hi-res graphics and programming
on the VIC 20. This book requires the VIC Super Expander Cartidge with
hi-res graphics commands.
PRICE: ON HOLD!

TITLE: Computes! First Book of the VIC
PUBLISHER: Compute! Books Publication
Copyright
Pages
Spiral bound softcover
NOTES: Games, Porgrams, and other helpful information for users of the
VIC 20. Great book!
PRICE: ON HOLD!

TITLE: Easy Finance IV
PUBLISHER: Commodore Electronics, LTD.
Copyright 1983
83 Pages
Softcover
NOTES: This is the manual for Commodore's Powerful yet user-friendly business management financial program. No software included. If you have the software and do not have the manual then this book is for you.
PRICE: $1.00

TITLE: The Commodore 64 User's Guide
PUBLISHER: Macmillan Publishing Company
Copyright 1983
121 Pages
Softcover
NOTES: This is not the official c64 user's guide published by Commodore yet it is very helpful since not only does it document CBM expansion devices, but other manufacturers too. Highly recommended!
PRICE: $6.00

TITLE: MPS 801 Dot Matrix Printer User's Manual
PUBLISHER: Commodore Business Machines, INC.
Copyright 1983
44 Pages
Softcover
PRICE: $2.00

TITLE: VIC 20 User Guide
PUBLISHER: Osborne/McGraw Hill
Copyright 1983
388 Pages
Softcover
NOTES: This is not the official VIC 20 user's guide published by Commodore. This book delves into the VIC much deeper than the standard VIC 20 manuals. Lots of tables and example programs. This book is highly recommended!
PRICE: ON HOLD!

TITLE: Stimulating Simulations for the VIC

*************COMMODORE RELATED HARDWARE**************

ITEM: VIC 20 Power Supply
DESCRIPTION: Small black VIC 20 Power Supply, old style with small two
prong female plug.

REQUIREMENTS: A VIC 20 computer
NOTES: Tested and works fine
PRICE: $5

ITEM: X1541 Cable
DESCRIPTION: This cable enables the user to hook-up a 1541 drive to the parallel port of you PC to transfer files (Like the ones you got off the web)
REQUIREMENTS: A 1541/1571 or compatable drive, A PC with a parallel port, a copy of Star Commander (available all over the web, just do a search)
NOTES: I have been transferring files from my PC to my commodore 64 for about a year and a half now. To make things easier I now have a 1541 drive attached to my PC at all times. I make these cables myself. They look good and are durable. They are also tested prior to shipping. I can make these in custom lengths (not to exceed 4 feet).
PRICE: $12

ITEM: Serial Cable
DESCRIPTION: You need one of these to use your floppy drive and your commodore printer.
NOTES: I make these custom so you may specify a particular length you require (not to exceed 4 feet). They look good and are durable. They are also tested prior to shipping.
PRICE: $8

====================FLOPPY DRIVES====================

ITEM: Commodore 1541 Floppy drive
QUANTITY: 3
DESCRIPTION: 5.25 inch floppy drive (serial)
NOTES: Drive powers up lights come on. yet drive does not work, more than likely an alignment problem. You may be able to re-align these by using software and documentation Via the web(I have been lucky on several occasions doing this), I just simply do not have the time to mess with these. Worse comes worse they can ban used for parts for another ailing 1541 drive. No power cable included(you can pick these up at Radio Shack or most computer stores).
PRICE: $5 each.

ITEM: Commodore 1541 Floppy drive
QUANTITY: 2
DESCRIPTION: 5.25 inch floppy drive (serial)
NOTES: Drives work great. No power cable included(you can pick these up at Radio Shack or most computer stores).
PRICE: $15 each or $20 with a power cable.

====================JOYSTICKS====================

ITEM: Wico Command Control
DESCRIPTION: This is a high quality joystick that has a fire button on the base and one on top of the stick with a selector to switch between

the two. A great joystick that has an excellent feel to it, definately
a tool for the pro-gamer. Very clean!
REQUIREMENTS: For use on most 8 bit commodores and 8 bit atari
including the atari 2600
PRICE: $5.00

ITEM: Competition Pro Joystick
DESCRIPTION: This is a high quality joystick that has two buttons on
the base(for left or right hand players not fire button A or B).
Definately a tool for the pro-gamer. Durable construction and very
clean.
REQUIREMENTS: For use on most 8 bit commodores and 8 bit atari
including the atari 2600
PRICE: $4.50

ITEM: Wico Black Max
DESCRIPTION: Small mid-quality joystick with a fire botton on top.
Works great and clean.
REQUIREMENTS: For use on most 8 bit commodores and 8 bit atari
including the atari 2600
PRICE: $3.00

ITEM: Gemstik
DESCRIPTION: Small mid-quality joystick with a fire botton on base.
Works great and clean.
REQUIREMENTS: For use on most 8 bit commodores and 8 bit atari
including the atari 2600
PRICE: $2.50

PRICE: $7.50

======VINTAGE MAGAZINES=======VINTAGE MAGAZINES======
======VINTAGE MAGAZINES=======VINTAGE MAGAZINES======

TITLE: Kilobaud MICROCOMPUTING
ISSUES: Feb. 1980, March. 1980, Feb. 1981, May 1983
NOTE: Wow! These magazines are a RARE find! They were published in the days where real men built their own computers from Kits (Remember Heath Kits?), after market boards, and even by scratch. These magazines are a veritable goldmine of information and nostalgia. Very cool old micro-soft ads (When M-Soft was a small player in the feild), and the Apple computer ads that consisted of a pc board and no input

or output devices (had to build your own apple!). WOW! My highest Recommendation!
PRICE: $5 each

**********SHIPPING INFORMATION**********

Customer is required to pay all shipping charges. Just send me your name and address with your order and I will calculate shipping. Most books (if they are not too heavy) I can send priority mail (3 day) for about $3 anywhere in the Continental US. Also please note that some days I am rather busy, so give me a couple of days before I ship (I will always try to ship day of order, but I do have a full time job.)

Checks(I will accept personal checks but I must wait til they clear the bank before shipping) or Money Orders must be made payable to Jon Lucas.

Send all orders to:
Vintage_Micro@yahoo.com

If you are interested in receiving this catalog plus future updates and auctions Please send email with Subscribe in the subject line.

Thanks and Happy Holidays to all!

Atari 800 , Rana & Indus GT Drives and 850 Interface. All cables.

Best offer takes it all. *Tons* of software (who knows if it's still
readable :)

4203. Strange Place to buy Atari Stuff

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-14 00:00:00 UTC
From: Bruce Gomes <bgomes@magiccarpet.com>
Message-ID: <34937D53.EE2E1BFD@magiccarpet.com>
Source record: 67889

```
Went out shopping today for furniture. As I was looking around
and noticing all the computer cardboard 'props' I suddenly found
a desk with the following four props;
- Atari 1010 Cassette
- Atari 835 Modem
= Atari 1030 Modem
- Atari 1050 Disk Drive
I grabbed a salesman who told me that someone who use to work
there purchased a PC and brought them in for props. I
offerred him $10 for them and now they're mine!

Bruce Gomes

Is anyone besides me getting fed up with the auction of the week postings
and other bloated articles? As a news admin, I can send out cancel messages
to remove the offending sale spam.

Do we want to cancel:
a) no articles
b) articles selling items other than atari 8-bit stuff
c) articles posting other than 'I have items x,y, and z for sale'
d) articles saying anything other than 'If you are interested in my sale/
auction, please see http://blah.blah.blah'
e) any other ideas?

Let me know what you think!

December Auction - Update 15

Auction Rules:

-In case of ties, the first bid received is the bid accepted.

-Auction will continue through Monday, December 15, 10:00pm central time. After that date, bidding will continue on any items which have received a bid within the last 24 hours. Anyone may bid on an item that is still receiving bids. Minimum bid increment may be increased after the auction deadline.

At the deadline, items will be marked sold immediately if they had no bids in the last 24 hours. For
example, a cartridge that received a bid at the beginning of the action will be marked sold at the deadline
unless a higher bid is received within 24 hours before the deadline.

-Not accepting trades at this time.

-If you bid, you are expected to buy. Payment is by check or money order in U.S. Funds. No CODs. Allow 10 business days for checks to clear.

-If you have a U.S. address (except Alaska or Hawaii), total shipping and handling is $3.95 for any number of cartridges/manuals/magazines; $6.95 if package includes systems, modules, hardware, or more than 2 books. I'll pay any difference. Some items require actual shipping, if stated.

-Place a bid by item number and description. Your first bid must include your name, address, and phone.
If you would like to remain anonymous, please include a substitute name with each bid.

-Minimum starting bids are listed. Minimum bid increment is .50 on items under $3, $1 on items $3-
$9.99, $2 for items $10-29.99, and $5 for all others.

-Instructions and box are only included if stated. New in box is new, but not necessarily sealed. Complete
in box contains instructions and is used.

-Send all bids to ClassicAuc@aol.com.

Atari 8-Bit Computer Accessories
A1. Panasonic KX-P1092 Epson Compatible Dot Matrix Printer. Includes 2 ribbons (installed and extra unopened)/Operating Instructions manual (includes codes, charts, type-in BASIC examples). 4207. Multilple, frequent crossposts and AUCTIONS!

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-14 00:00:00 UTC
From: russg@en.com
Message-ID: <6713e3$7o9$1@antares.en.com>
Source record: 67893

I saw a article by Jason D. in csa8, offering to cancel crossposted steeeeeeeeeeeeeeeeeeeenking AUCTION! Yes, GREAT! Do it.
While I'm on the subject, I post 'f'ollowups, make original posts and can't ever see them from my other account at CFN. This is my 'private' account, but I'll risk spam and the being 'filtered' (if that's what's happening) again in order to address these issues.
Here's a copy of a post I posted about 2 weeks ago that I never saw show up at CFN and I believe may have been 'filtered' out of usenet:
****
Thanks to the people who responded, both in this group and in e-mail about my question regarding being 'filtered' from usenet.

I can't followup to my message about 'possible to 'filter' someone from usenet. Because all my followups fail to appear in CFN. I could not/can not see the Re:xxx followups to my messages, ie. I cannot see any threads I join or start from CFN. I searched www.dejanews.com, which a couple people suggested I look at. It seems I've been not only not been seeing any followups to either original posts or followups to my followups, but this has been going on for years (I had 240 posts and followups in dejanews, many I'd never seen before.)

This certainly explains a lot. What I mean is, there is a LOT missing from what I can see, and I suspect a great deal of usenet doesn't see what I say. As to whether it has to do with CFN, one person said the only thing to do was use another service, I don't know. For some time, I felt that my stuff was getting 'lost' somewhere. My visit to dejanews proved that. Also possible is that one can be 'filtered' from usenet.

My conclusion at this point. The absence of any way to followup to other people's posts, and to see other people's followups to my posts makes comp.sys.atari.8bit sorta useless except to read it and send e-mail to people who's messages I read. I have no idea the source of the 'lost' articles, but at least now I know why it never seemed that people followed up to my posts, and people might understand why their followups to my posts are never posted back to.

Russ

I think Mike was talking about system ROMs. Like, dumps of the Atari ROMs, which are, as they say, copyrighted, and that's why they're not included with distributions of Atari emulators.

Tho that didn't stop me from downloading them from somewhere. I can't recall where, tho.

As annoying as the offending messages seem, I just can't figure out what to cancel or which criteria I would use to make those decisions. If, for example, we allow for the fact that other platforms exist and that some of us (myself included) use hardware for those platforms, we can't exclude (b). In the interest of free speech and keeping with the nature and philosophy of newsgroups, it would also be difficult to cancel (c) and (d). I think we're stuck with (a).

I haven't seen the charter for CSA8, but that might give us some guidelines.

For the past couple of years I have been working on building a CD-ROM for the Atari
8-Bit computer. I am looking for items that have not been published on the Pool Disk or the
Disk put out by James King. If you have something to contribute be it text or file then send it to me..I will enclude it in the CD-ROM pc format to be downloaded to the Atari 8-bit. I am not interested in Copyrighted files! The files can be copyrighted proviede you hold the copyright and or Text Files you have written in any area upgrade ect!

I know there are Tech support individualy that have documented all or the computers, drives ect built for the Atari 8-bit. Many of you have gone through each item with a logic probe as I have and have the information layed out.now is the time to share the informaton with others! I have and will continue to do so..If you have something you wish on the disk
then by all means send it to me stating what it is what it does ect and it will be encluded.

Earlier I received some Copyrighted items from individuals holding the copyright but
I (dummy!) didn't know how to receicve them..if you sent me something before to be incldued in the disk please send it again as I can now tap the right key to get the file

Appppreciate your efforts
bob

absolutely, let them put the coloecovision stuff in a
conference that cares

>c) articles posting other than 'I have items x,y, and z for sale'
>d) articles saying anything other than 'If you are interested in my sale/
>auction, please see http://blah.blah.blah'

Positively. Nuke those nearly hourly postings of 500+ lines of
catalog listings.

>e) any other ideas?

>Let me know what you think!

Boiling oil? Bamboo splinters under their fingernails? Or we
make them all use a VIC-20 with a tape drive for the rest of
their lives.

As I said earlier, there are conferences to post stuff-4-sale
messages and someone mentioned the ebay web auctions too.

JD> d) articles saying anything other than 'If you are interested in my sale/
JD> auction, please see http://blah.blah.blah' e) any other ideas?

First of ALL I think we can start with B.....
And I also do not like those BIG auction that will resend everu 1 or 2 days..
So you news is getting bigger and bigger.... There are still people that have
to pay for there online time and also for every byte that they collect from
the NET (not me) but I know that there some of them....

ANd for those people that spam this newgroup it is better to use the D version
to let poeple know that they have something to sell.... ;-)

JD> Let me know what you think!

Oke here it is....

P.S. Last week I have post a message to let people know of my christmas page
And now I get spam in my mail box on that E-mail adres.... ;-(

JD> Jason Duerstock
JD> jason@sdi.cluephone.com

Is this the right adres for you because it came from a other one ??

My fault, I'm using the wrong terminology. I'm actually looking for GAMES, either disk images or ROM images from cartridges (I called them all ROMs out of habit from working with arcade emulators, where everything is a ROM image). I have all the system ROMs, and am running Rainbow just fine (I plan to register, of course).

So, my offer still stands to anyone who wants to contribute. I know there must be some of you out there with extensive collections of classic Atari 8-bit games; i.e. Choplifter, Star Raiders, Shamus, Miner 2049er, etc. There is currently NOWHERE to find any of these on the net - nowhere at all (except Jason's site, which has about 7 of them). That is truly, as this thread is titled, a disgrace. :(

I have the storage space and the bandwidth to host a full-fledged archive, and would like to do so. Problem is, I don't have anything to archive, as I came on the Atari emulation scene a little too late to get the program images. If you have any of these items, please contact me and hopefully we can arrange for you to get them to me. I will put anything I get up on my site (http://kohary.simplenet.com/computer.htm; if I start an archive, I'll probably make a separate Atari page which you will be able to access from that URL) and give you the credit for sending them, if you want it (of course, you can also remain anonymous).

Whew! Did that make sense? ;) It's just sad that we can find disk/ROM images for almost every other type of emulator out there, but not for the Atari 8-bit machines. All the sites that used to carry them are down. Well, I'm willing to pick up the torch; all I need are the contributions. Anyone want to help?

Mike

P.S. No, this is NOT a scam to try and get your disk/ROM images. I mean, I do want them for myself, but I *will* put them up on my site for all to share.

Can anyone remember a game called Hunter on the ST. I remember being absorbed by the adventure the entire days. It involved a man walking around islands in a 3D environment. He could steal helicopters, hovercrafts bycycles and all manner of transport as he ventured from island to island. The plot involved following clues and recording locations in a log book as you travelled along. I havn't a clue who it was made by only it was released around the same sort of time as Midwinter 2. If anyone else can remember this game, has any more info about it or if by a miracle knows whether it was ever converted to the PC I would love to here from them. If anyone has a copy for the PC or knows where to get one from I will be happy to pay.

Netscape has options so you can directly download files without
executing, reading, or viewing them, on the Mac, hold down Option when
clicking on the file, on the PC I recall you use the right button (or
maybe ALT).

I can't answer the Atari part of the question but I remember reading
some articles on the graphics. The game pictures were done by artists
on Amiga computers and then converted to the 8-bit formats, from the
Commodore 64 versions I have they did an excellent job at the artwork
and the conversion. :) And the games are pretty fun too!

well, being how this is an atari 8 bit base, the postings here should
deal with atari 8 bit equipment mods, hardware, etc... an occasional
add on doesn't hurt but 400 line long postings for girlie pics or ibm
type stuff is completely off base here. I come here to read about
atari 8, nothing else.

I like to see the articles with atari 8 stuff for sale here but not
with 400+ lines of other crap attached. keep this an atari8 base.
other shit can go to the proper newsgroup.

>Karl
The additional 128k could be in the form of four 64kx4 chips. If those are socketed, they could be used to upgrade a 600XL to 64k. By the way, Tandy made a lot of 286 machines which were only XT compatible (8-bit bus).

Anyone have a ref card for Atari Writer or a text file with the keystroke commands on it? I just got an AtariWriter cart and no docs. I can't remember the commands that I used to know 11 years ago. Silly me. Thanks...

...b

Look in the archives for my programs APACVIEW and JVIEW. The more recent JVIEW needs an 800XL or 130XE, but does decode GIFs in 16 level grayscale, or mode 8, with dithering.

I also have written an (unreleased) .LZH file decoder, which handles the more commonly seen -lh5- encoding. I can post somewhere if anyone's interested.

Fractulus, Shamus, Astro chase, Case-II, Star Raiders and the
others you mentioned later in this thread are all in the
games001-022.ATR images on Jelly Stone (Hackers) archive. Problem
is, most a hacked in one way or another, so the Gorgeous (pre-
VGA-VGA) intro to Fractulus and some others like Karatika (Major
world cities, attract mode- Sidney, Mt Fuji ..) are sort of
butchered.

BTW, not really understanding the limitations of Atari 8bit
graphics. Did any of those awesome SHADED pre-VGA modes ever make
it into real game play? You all know the ones, Fractulus intro,
B&C's Demo disk with the color shaded pipes and the alternating
Robot & Spaceship Atari demo?

Can you read/write to an Atari 3.5" floppy on your Mac? Or, can the xf551
read PC floppies (our Mac can read/write those for sure)? If either is
true, it should be doable.

Bob,
By all means DO IT and the sooner the better. Both versions would be
cool. What problems/complexities do you foresee with the faster one? How
compatible to a 130XE would either/both be?

4238. Atari Lab Loaner (Update #3)

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-15 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19971215012300.UAA19635@ladder02.news.aol.com>
Source record: 67918

The following are authentic Atari Lab Loaners with Lab Loaner labs, untampered with dates or lot #'s, these are not cheap eprom copies in blank cases.

Rules:

1. Auction will close at Midnight 1/15/98
2. Winners are responsible for shipping charges 3. Items will be shipped USPS Priority Mail
4. Items must be paided in advance with check or money orders, absolutely no cash!
5. Updates will be emailed to all bidders once a day, updates will be posted in the
newsgroups once every 3-4 days to avoid clogging the newsgroups with posts
6. I reserve the right to pull any item at anytime 7. Bids will be made in $2 increments

Note: Although items are up for auction, items are all available for trades, I am interesting in anything made by or made for Atari systems including 2600,5200,7800,Jaguar, computers and coin-op.

Item Description Bid Bidder

1 Socerer's Apprentice 3-28-83 $10 woodcock
2a Alpha Beam Ernie 5-16-83 $10 woodcock
2b Alpha Beam Ernie 5-16-83 $10 woodcock
3 Moon Patrol (Blue Lab Label) 6-2-83 $10 woodcock
4 Donald Duck Speed Boat 4-12-83 $30 woodcock
5 Haunted House $10 woodcock
6 Cookie Monster (no date listed) $10 woodcock
7 2600 Diagnostic v2.6s $10 woodcock
7a 2600 Diagnostic (Secam ver.) 2.6s $14 tspigp
8 Galaxian 074 $10 woodcock
9 Kangaroo 4-14-83 $10 woodcock

Also available for Trade (ONLY)

Texas Chainsaw Massacre w/manual
Halloween
Bachelor Party (New in Box)

Send all bids to cvendel@aol.com

IMHO cancal no articles. You may no enjoy the spam, I know I dont, but
this is not a moderated newsgroup. If you need that level of control I
suggest you create comp.sys.atari.8bit.moderated.

I dont believe an article being off charter is a good reason to censor it,
and there are other ways to deal with spam.

at daffy dot aatech dot com) wrote:
->As I said earlier, there are conferences to post stuff-4-sale
->messages and someone mentioned the ebay web auctions too.

But there are no other major, English-language, Atari 8-bit-only
newsgroups. I've been watching newsgroups for a couple of years
and as far as I've been able to tell this is the only Atari 8-bit
newsgroup that fits this description.

Telling posters who want to sell Atari 8-bit stuff to go some-
where else does nobody any good: 1) the sellers' messages would be
lost amid thousands of messages (and spam) on the for-sale news-
groups; and 2) the rest of us, who don't want to wade thru tens of
thousands of messages every day on those huge for-sale newsgroups
in order to find Atari 8-bit for-sale ads, would lose access to the
information. There are reportedly 100,000 new messages posted
every day on the Usenet. I don't want to have to go all over the
place "out there" in order to find Atari 8-bit info.

In my opinion, the "problem" is small and inconsequential. At
the most, the only messages worthy of cancellation treatment are
those that are completely off-topic (like the recent frog joke)
and fortunately they're few in number.

On 15 Dec 1997, Steven J. Tucker (http://www.nacs.net/~classics)
replied to Jason Duerstock:
-> IMHO cancel no articles. ... this is not a moderated newsgroup.
-> If you need that level of control I suggest you create comp.sys.
-> atari.8bit.moderated.

I agree, but this raises some questions. Is it possible for a
nonmoderator to issue cancelbots on an unmoderated newsgroup that
would knock certain undesired postings off the Usenet completely
(i.e., before everybody else would've received those postings)?
If so, wouldn't that person have become a self-appointed
moderator?! (Of an "unmoderated" group!?)

A worse scenario would be this: a newsgroup is unmoderated
but certain sponsors or leaders of the group try to enforce a
theoretical ban on the posting of for-sale messages by frequently
posting reminders quoting the group's official policy. I've seen
newsgroups like that and the result is worse than the situation
we've already got here. When for-sale ads are posted, which is
inevitable, the sponsors post flurries of counter-messages, which
then provoke debates on the issue, which deteriorate into flame
wars. The upshot is that a group might as well be either moderated
or unmoderated; an attempt at a middle ground isn't likely to work
out well.

<asharkis@erols.com> wrote:

>I haven't seen the charter for CSA8, but that might give us some
>guidelines.

I have this in the FAQ:

Subject: 2.1) What is comp.sys.atari.8bit?

news:comp.sys.atari.8bit is the unmoderated Usenet newsgroup for discussion
about the Atari 8-bit family of computers, including the 400, 800, 1200XL,
600XL, 800XL, 65XE, 130XE, 800XE and the XE Game System!

comp.sys.atari.8bit was born around 1986 when the earlier comp.sys.atari
newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st.

Large binary posts do not belong in unmoderated discussion groups like
comp.sys.atari.8bit. If you wish to share PD/freeware/shareware, use
alt.binaries.atari and alt.binaries.atari.d or upload the software to the
University of Michigan Atari Archive.

To the best of my knowledge, there is no charter for comp.sys.atari.8bit,
presumably because the custom of drafting charters for new newsgroups did not
exist at that time.

Well, I'd favor cancelling non-Atari-8 posts, along with any auction
posted more than once every 3 days.

I do this all the time. I found that the disk should be formatted
on the Mac (DOS format) first, copy the files to it and then use
the 3.5" XF551.

Source record: 67929

(I like G. Miller's short to the point opinion.)
On this issue of Jason D. cancelling AUCTIONS.:

I agree with cancelling all AUCTIONS, as a violation of usenet policy, not csa8 policy, usenet policy, read the news.newuser 'Advertizing on usenet: How to do it, how not to do it'.

So, far I'm in the minority.
Sid Pacman (aka David Moeser): Feels that someone posting complaints about auctions is wasting bandwidth, everyones time (I take liberty of interpreting what David said.) But he doesn't feel the multiple, frequent, cross-posted, off topic, large volume AUCTIONs are a waste of bandwidth and time. Or feels nothing should be done about it.

Steve Tucker said no cancels.

Alan Sharkis doesn't believe in someone taking censorship into their own hands.

I believe I've been censored, either by CFN or somewhere else, exactly because I oppose AUTCIONS as a violation of usenet etiquette, a waste of bandwidth. So, I'm on the 'power' side, if you can do it, tell me how, I'll do it.

Now Jason's questions: Which, if any articles to cancel.

I decided on an individual basis which articles I would counter-cross post a copy of above mentioned usenet 'Advertizing....' document. My decisions were as arbitrary as how I felt about the particular multiple, frequent, large, cross-posted articles were different.
As a basic guideline, if it is an AUCTION, meaning frequent postings, and if it is a large posting, that should be cancelled. I don't care about other groups, just csa8.

So, Jason, I re-iterate my opinion, 'IF YOU CAN DO IT, DO WHAT YOU FEEL IS BEST', don't try to get a concensus, there will never be one.

Not exactly. When the cancel message gets there, the target message is
removed, if the server obeys cancel messages. The frightening statistic
is that 2/3 of messages arriving at DejaNews are spam-related. That's why
they've adopted multi-layer filtering to get rid of it.

> wars. The upshot is that a group might as well be either moderated
> or unmoderated; an attempt at a middle ground isn't likely to work
> out well.

The advantage of the cancel-based approach is that it doesn't delay the
messages the way moderation does. There are other approaches, tho...
Machine-moderated groups, like some of the Babylon 5 newsgroups, for
example. When you post there for the first time, you message is held
until you send a confirmation. This tends to confuse bulk posting
software. A similar tactic would be to create comp.sys.atari.cancel,
where every message is automatically cancelled, removing it not only from
that group, but from every group it's crossposted to. Neatly handles
people that crosspost to every group with "atari" in the title, or to
every group, period.

It might be worthwhile to create a comp.sys.atari.8bit.marketplace, and
autocancel everything from this group containing "FS:", "FA:", "WTB:" or
"auction"

If there could be another newsgroup started just for sales,
auctions, etc, I don't know 'comp.sys.atari.8bit.forsale' or
something like that. When the auction messages come up, I just
'quit' after the first screen. So removing them would
probably be a good idea; however, we need to know if anyone
is actually getting anything out of them being here. If not,
then there is no point to them being posted here, and it should
be stopped. Perhaps it is time we were moderated What would
that entail, positives/negatives?

Anyone can issue control messages like cancels, its just a matter of using the correct headers and such. Forging a cancel is as easy as forging any other usenet message. Nobody has the right however, to retromoderate unmoderated newsgroups.

People who issue cancels against other peoples messages are no better than the spammers themselves and should be dealt with in the same manner. Complain to thier ISP, and if that fails start complaining to the people who are peering w/ them for news.

Both the spammer and the self appointed 'moderator' will quickly find thier spam and control messages no longer making it to other hosts, or thier ability to make such posts removed all together.

By a TOS agreement, the news administrator of a particular site may be permitted to issue spam cancels against articles originating from that site, or being sent to other servers from that site, but they may not issue arbitrary cancels against peple or posts that 'dont like'.

The charter of the group does not appoint a moderator, so there is
no point in even considering it. If someone wants to be newsgroup
god, then they will have to create a moderated group and get themsevles
appointed moderator.

(Steve T. opposes cancelling articles.)
Right. On principle, I agree. This group has had auctions for
years/months. I counter-cross posted an official usenet document
to those long, frequently posted Auctions, and sent e-mail
to the senders. Soon afterward, I was no longer able to
see any of my followups and I don't think my counter cross-posts
went out. So I believe, do not know for certain, that the
auctioneers are cancelling people. Two wrongs make a right?
I don't believe I am allowed to counter cross post a usenet
document, why should auctioneers continue their activities
without free comment, response to their activities?

(suggestions of a new A8 for sale group or moderated.)
If we're allowed to express ourselves, with e-mail and
counter cross-posts then I've got a fair way to respond
to what I feel is violation of usenet etiquette. If
I'm censored in what I say because I complain, and
can't send junk back to junk, then we don't have
free speech both directions.
I oppose a new group or a moderated group. I'd like to
see auctions responded to negatively with free speech.
Please realize that the junk in csa8 effects the
participation of people who pay by the byte more
or less. AUCTIONS reduce the ability of people
to participate in csa8. Most auctioneers don't
participate, just try to sell stuff.

Your assuming that someone cancelled your articles. I doubt anything
your posts was cancelled by anyone. Have once used CFN for a long
time, I can testify that its machines and news servers are very
unreliable.

If you can show me control messages from someone cancelling your articles
thats another matter. And your correct, 2 wrongs to not make a right, even
if the second wrong is taking your revenge by censoring someone for revenge.

And there is also SAM, the suite of graphical applications that can be
controlled by a mouse, the joystick or the keyboard. It is still
available from PPP and DGS.

It was inspired by the ST's GEM.

SAM meaning Screen Aided Management, I believe. Perhaps there're even GUIs for CP/M out there? Anyway, the people who brought SAM also brough Quick, a nice programming language I've read about in a German magazine (which unfortunately doesn't exist anymore, although it lasted longer than its counterpart here in the Netherlands)

B&C sells Atari joysticks. But if you already have Atari joysticks that have worn out, B&C also sells joystick repair kits with all the inside parts and they also sell just the joystick boards that are what usually go bad. I bought a "brand new" joystick recently and it was already worn out by customers "testing" it. After installing the new parts from a repair kit, it really was like new. B&C are at 1-530-295-9270 and their fax is at 1-530-295-9271.

> Is anyone besides me getting fed up with the auction of the week postings
> and other bloated articles?

To some extent.

> As a news admin, I can send out cancel messages
> to remove the offending sale spam.

Unless you are the moderator of this news group, you should not do this.
It is against USENET policy, and, if reported to USENET, your domain may be
cancelled.

> Let me know what you think!

I think that since this is not a moderated news group, there is nothing you
can and/or should do. If this really bothers you, then get a news reader
with a filter, and set it up accordingly. Don't try to control other
people, it's not your place.

Sometimes there are more whining posts than spam posts. UseNet is like the
real world, if you don't like where you are, you can either learn to
tolerate it, or go somewhere else. Like driving, UseNet is a privledge,
not a right, despite what some people want to believe.

Sid Pacman <erasmus@atari.8bits.world> wrote:
>On Sun, 14 Dec 1997, Kenneth Jennings of Miami, Florida (kenneth
>at daffy dot aatech dot com) wrote:

Might it be the case that one's opinion on the matter of lengthy "auction and for-sale postings" might depend, at least in part, on the particular technology/mechanism one uses to READ this newsgroup?

If one's News-reading mechanism requires copying all articles, in their entirety, to one's own, local disk BEFORE SEEING (and having any opportunity to "filter") them, one might quite naturally oppose the waste of communications bandwidth, and diskspace, involved in transferring and storing article(s) which even BEGIN to slide into the realm of the "off-topic," "redundant" (i.e. too-frequently reposted), or "overly large."

On the other hand, if one's News-reading involves merely DISPLAYING articles -- or even just PARTS of articles -- stored ELSEWHERE, one might be inclined toward greater charity on the subject. I, for instance, am able to look at the first ten-to-fifteen lines of an article, decide whether or not it is "worth reading," and skip to the next, without having EVER TRANSFERRED to my system/screen anything MORE than that first ten-to-fifteen lines -- and having NOT STORED even THAT much. Naturally, I have no objection to nearly-infinite volume of relatively "off-topic," "redundant," or "large" postings, because that volume has virtually NO impact on my OWN ease-or-difficulty of simply SKIPPING the postings I'm not interested in. It's even easier for me when you consider that I can skip entire related THREADS of articles with a single keystroke, even to the point of preventing any FUTURE articles in that thread from even being PRESENTED to me!

Also in my case, not only do I "not suffer" from auction/for-sale postings, I even gain some BENEFIT from them -- namely, this newsgroup is, and for a full decade has been, the ONLY place I ever find Atari 8-bit products. I "don't do mail-order," and my track record for finding 8-bit stuff even in other areas of Usenet or the Web is not great -- so this newsgroup is literally my ONLY Atari 8-bit resource. Even creating a separate c.s.a.8.forsale group would not be as convenient; for one thing, I'd have to rouse myself to pester my deaf-eared ISP to PICK UP the new group, an effort which history strongly suggests is likely to fail.

I would be interested in reading the remarks of readers for whom the relationship between News-reading technology and attitude-toward-auction-and-for-sale-postings is NOT as I have described it above. Such folks' opinions, in MY opinion :-), ought to be more "pure," less influenced by

purely selfish -- excuse me, "pragmatic" -- concerns.

Count me, therefore, as one big, fat, hairy vote in FAVOR OF KEEPING the auction/for-sale postings -- though I have no objection to imposition of, say, a voluntarily- followed (I see no way of ENFORCING it) "style guide" regarding frequency and size of postings.

Absolutely! I use IE 3.0 news reader, and I only get the subject, poster, date/time and size. That's all that gets downloaded, period. Someone can, and should, get a new newsreader, or at lease learn how to use it (or understand how they work....because those complaining of bandwidth problems probably either don't understand that their news reader doesn't download the entire post, or don't have their newsreader configured correctly), if they are copying ALL the posts to their local machine.

Hiya TJ!

I've used both programs, and both have their places. Ice-T is best for connecting up to other computer systems, especially VT100 or ANSI terminal emulation, which BobTerm cannot do. OTOH, BobTerm is best for general uploading/downloading, as I can't seem to get Ice-T to reliably download (might be my problem), and as far as I know it still cannot upload. So you need to use both.

QUOTED TEXT FOLLOWS:
David Moeser said:

'A worse scenario would be this: a newsgroup is
unmoderated but certain sponsors or leaders of the group try
to enforce a theoretical ban on the posting of for-sale
messages by frequently posting reminders quoting the group's
official policy. I've seen newsgroups like that and the
result is worse than the situation we've already got here.
When for-sale ads are posted, which is inevitable, the
sponsors post flurries of counter-messages, which then
provoke debates on the issue, which deteriorate into flame
wars. The upshot is that a group might as well be either
moderated or unmoderated; an attempt at a middle ground
isn't likely to work out well.'

END QUOTE

Then I said:

On 15 Dec 1997, James R. Gilbert wrote:

->Sid Pacman (aka David Moeser): Feels that someone posting
->complaints about auctions is wasting bandwidth, everyones
->time (I take liberty of interpreting what David said.) But
->he doesn't feel the multiple, frequent, cross-posted, off
->topic, large volume AUCTIONs are a waste of bandwidth and
->time. Or feels nothing should be done about it.

Then David M. Said:
QUOTE:

This is so far off base compared to what I've posted that it's
funny. What I actually referred to was all the extra verbiage
because of the complaints-about-complaints-ABOUT-complaints about
for-sale postings in an unmoderated group where such postings are
legal but frowned on. (Is that clear?!) If anybody wants to see
for themselves, tune in to the vinyl LP group.

END QUOTE

David, and the group. I apologize for mis-interpreting what
you said. And No, I still don't understand. But that's
alright, I frequently mis-interpret what people say.

It's been educational, this thread. I learned that 90% of
posts are lost on MS Network and that 2/3 of posts are spam

related at Dejanews.

Thanks for the discussion.
Russ
(Above prepared in advance. I begin to understand. Yes, this
may be a flame war. Sorry about that. And I don't like quoting
what people said, to save space.)

the power supply has a fuse inside that is probably blown.... bad news
is that you can't open the case without sawing or breaking the glued
joint. might be worth opening this blown one and using it to
troubleshoot your problem - then buy a new supply to use on the drive.
the 810 must have a shorted capacitor or rectifier somewhere in the
power circuit. probably.

The 3.58 and 7.16 mhz versions of the 65816 would work in a 130XE - I
just don't like that model.... actually, I only like the 1200XL. :)

The high speed upgrades require that the clock be stepped back to
1.79mhz while talking to ANTIC, POKEY and the other chips. The only time
we can really go 7.18mhz is when dealing with RAM. So, I have to make a
little board with RAM (512K) and a faster PAL chip along with the 65816.
Conceptually, it is pretty simple. In practice, going that fast (I
actually have some 14mhz chips also) is tricky unless you have a
multi-layer board made ($).

While I don't pay "by the byte," I don't have a flat fee unlimited account, either - by choice. There are such accounts available in my area, but there are also 4 adults living in this household, and I don't wish to tie up the family phone unnecessarily. I use Delphi's "Value Access Plan," where I pay $12.95 for the first 6 hours and $2/hour after that. Delphi does offer a "25 hour Plan" at $23.95 for 25 hours, but at my present usage pattern I don't need it.

I use a 320k 130XE with Bobterm, MyDOS 4.53, an 850, and a 14.4k modem running at 9600. Most days I can log on, capture my mail to my RAMdisk, move to Delphi's Usenet reader, and capture the day's posts to this newsgroup in less than 5 minutes. I then log off and read it all using the 80-column text reader from Ice-T 2.72. I see little advantage to reading online vs. offline, and if I do it offline the family can use the phone. If I want to make a reply, especially a long one like this one, I use my favorite text processor, Textpro, which I know so well the editing commands are automatic - unlike Delphi's editors. I prepare my text offline, then call Delphi again and upload it directly from my RAMdisk.
It's not much of a hardship for me to operate this way, and it keeps me from developing lazy habits. The 256k RAMdisk is much more than enough to hold everything on this newsgroup, including those annoying and interminable auction posts. No, I don't care much for them either, but if they're all I have to put up with I'll consider myself lucky indeed. I vote to leave them there.

Mike, there is a mirror of Yogi's site (I just checked, and it's all still
there): http://aegis.mcs.kent.edu/~clisowsk/mirrors/8bit:yogis_site/

As for breaking the images down, there are utilities for both Macs and PCs
for working with Atari disk images. The Mac one is called AtariVDEdit and
can be found on the Rainbow site. I don't remember what the PC one is
called or where you can find it, but it was promoted and discussed on csa8
within the last year.

This could soon be a thing of the past if the anti-spam bill passes.
check out http://www.cauce.org for details. I've received alot less
spam now since I started altering my address in the headers. I
still get occasional junk mailings, but I think those are leftovers

Perhaps it is time that some newsgroup reader software were
written for the Atari8, perhaps as an addition to Ice-T.
I don't want to beg, Itay, but is it possible? Ice-T is
already used by me 99% for telecom while BobTerm stopped
evolving long ago, so I see you as the logical person to talk to.
Ice-Thas proven itself to me for stability.

(at least add macros...?) Puh Puh PuhlEEEEEZE?

>bit much for such a small piece of rubber (or whatever it is). Does
>anyone know of any sources for these belts???

Two things you could possibly use.

One is a VCR drive belt. You have to know the size of belt you're looking
for. The second, though a little weird, is a rubber band.

->all articles, in their entirety, to one's own, local disk BEFORE
->SEEING (and having any opportunity to "filter") them, one might
->quite naturally oppose the waste of communications bandwidth...

You're absolutely right. The kind of operation you've described would be very awkward. Considering the huge amount of verbiage generated on the Usenet, the size of a packet of daily newsgroup messages could be megabytes, especially with the FAQ files or long for-sale messages included. In the old days, Atari 8-bitters would've said about such packets or files that "They're not Atari-sized. They're IBM-sized."

Now, if there are newsgroup readers out there who have to print the entirety of the newsgroup to disk, or to their own system, or worse, to paper, and who can't zip from posted article (message) to article with one keystroke or click, the question is: Should they have the right to dictate that contents of this newsgroup be "Atari-sized"? Or should they be gently advised, in sweet, soothing tones, to "update their browser"? This isn't even the IBM Age any-more; it's the Microsoft Age, and it's an era with little patience for methods or platforms a year or two old, much less ten or fifteen years old!

Now before anybody jumps to the notion that that's a slam at our beloved ol' platform, let me hasten to note that my three-floppy, two-printer, one P:R: and modem, joystick, and trackball-equipped 130XE Atari 8-bit system is still set up right alongside the "IBM" clone on which I'm typing this. And with the right software (Chameleon or one of the newer VT-100 programs) the 8-bit could be used for newsgroup usage, albeit a little more awkwardly in 40 columns half a "screen" at a time (like in the old days!).

A related point brought up in this thread, is that somebody else mentioned "paying by the byte." Is anybody out there really doing that in this day and age? Doesn't every Podunk have an ISP with a flat monthly fee by now? For $19.95 per month (or less) I can be online 24 hours a day, and as noted above, I could be using the Atari 8-bit, reading this newsgroup online with a Unix newsreader program running on the ISP's computer, zapping screens or entire articles in an instant with one keystroke.

In that case it would not be necessary for one byte, much less megabytes, to be "downloaded" to disk on my end of the phone line in order to read the newsgroup. And Atari 8-bit hardware and software (at 9600, 14.4, or 19.2, e.g.) should allow a reasonably fast screen display since a 56K modem (or the like) isn't needed for the purpose of displaying text. So if an 8-bitter is paying by the byte, or downloading entire diskfuls, I ask the question: WHY? There's no law requiring offline reading. These days online reading is cheap and the ISP provides the fast computer and fast programs (which can selectively mark batches of text for later downloading, if desired).

One possible objection might be that this scenario costs $240 per year, whereas some Atarian out there might be getting access to this newsgroup on one of the few (?) remaining Atari-based BBSes, which could conceivably be using some internet account to import the newsgroup and pass it along to the callers for free, the only problem being the strain on the limits of the old Atari-sized hardware and software by the resulting megabytage.

The 300-bauder might say, "Why should I pay $240 per year when I can read the newsgroup for free? Just get rid of the FAQ files and those long for-sale ads, and everything's hunky-dory." The answer is that there's no magic solution here, and the 8-bitter may have to accept some discomforts in exchange for being able to continue using the older platform at all in today's environment. Paying the $240 per year and hooking up to an ISP or AOL is standard procedure in order to be state-of-the-art these days; even if access is on a parent's or a school's account, somebody's paying for it.

The bottom line is: I vote for keeping all the messages. I don't think there's enough Atari 8-bit interest today to warrant more than one newsgroup.

->Don't try to control other people, it's not your place.

That's good advice. The good ISPs have "help" newsgroups where
users can ask questions about filters and get help with implement-
ing a filter program. Such programs may be available free. On my
ISP at least one subscriber (an Atarian, incidentally) has been
active in writing such a program, and there have been many postings
on the subject in the "help" group in recent months.

To which on 16 Dec 1997 Steven J. Tucker (http://www.nacs.net/
~classics) replied:
-> Your assuming that someone cancelled your articles. I doubt
->anything your posts was cancelled by anyone.

Indeed. A while back a former local ISP operator said, "No
ISP gets them all!" (Meaning messages.) The way messages bounce
around the "internet," sometimes they'll get missed by a parti-
cular ISP and sometimes they'll echo around and come back a second
time!

One reason a posting might not appear is that it was addressed
to too many groups. For example, a filter program might axe all
messages crossposted to more than 4 or 5 newsgroups. I've heard
of this being done.

->> Sid Pacman <erasmus@atari.8bits.world> wrote:
->
->[snip]
->
->>It might be worthwhile to create a comp.sys.atari.8bit.
->>marketplace,

This is misleading. It makes it look as if I (Erasmus) said
the line that follows your "snip." That's not my line, and in
fact I've posted messages OPPOSING the creation of a second Atari
8-bit newsgroup at this time.

Also, everybody out there should note that if you post public
messages on the Usenet with your real name and domain in the
message HEADER, you *will* absolutely, positively get put on
the mailing lists of SPAM mailers. It's 100% guaranteed. The
best advice is to NEVER post publicly with your real name and
real domain in the message HEADER. You'll notice that the
careful posters don't even put their real user IDs and domain
addresses within the text of a public message without taking
precautions like spelling them out. In my opinion everybody
should identify their messages by listing their name and location
-- in the message itself, not in the header (for the reason cited).

Spammers use automated programs to "harvest" addresses for their
mailing lists. With more programming (and hardware upgrades too)
the spammers could compile even more addresses than they do, but
so far they seem to have stuck to message headers. Keep your
fingers crossed. (And always try to stay ahead of them! Spammers
will be the door-to-door salesmen of the 21st Century. They're
here to stay!)

On 15 Dec 1997, James R. Gilbert wrote:
->Sid Pacman (aka David Moeser): Feels that someone posting
->complaints about auctions is wasting bandwidth, everyones
->time (I take liberty of interpreting what David said.) But
->he doesn't feel the multiple, frequent, cross-posted, off
->topic, large volume AUCTIONs are a waste of bandwidth and
->time. Or feels nothing should be done about it.

This is so far off base compared to what I've posted that it's
funny. What I actually referred to was all the extra verbiage
because of the complaints-about-complaints-ABOUT-complaints about
for-sale postings in an unmoderated group where such postings are
legal but frowned on. (Is that clear?!) If anybody wants to see
for themselves, tune in to the vinyl LP group.

You would do better to "quote" and then reply to the verbatim
text than to attempt to summarize the original. If the freenet
software doesn't do "quoting" then it might be better to just
state your opinion. Readers who want to look up the original
posting can pull up the old messages on their ISP or go to Deja
News or some such service.

By the way, I haven't heard the word "bandwidth" in roughly
two years. It may still be of concern in Atari 8-bit circles,
but in the Windoze Era nobody cares about it anymore. There are
so many applications these days that run into gigabytes that
the length of newsgroup messages is a small potatoes issue in
comparison.

Someone raised the question of a program to update the spartados clock
from the PC, so I wrote the prgoram to do it. APETIME.COM will be
included on the FTED32G.ATR image in the APE 1.16 distribution. Just
place it in your startup.bat or whatever, it works w/ both
disk based and X cart versions of sparta.

I've also made another updated SDX rom version that does not suffer from
an inability to read AtariDOS disk images w/ more than 4 VOTC sectors. The
stock (4.20 at least) cart just complains 'Unrecognized diskette format'
when it encounters a huge AtariDOS image. Anyone wanting the patch
information for that or the APE Warp+ support let me know.

I increased the maximum file write size for the PC Mirror to 7.8 megabytes. It
was previously crapping out at about 90k of writes. I cant imagine anyone
wanting to copy a 7 megabyte file from a disk image to the pc-mirror, but
now you can. :)

Bunch of other stuff too, look for an update soon.

Steve

he110@cleveland.Freenet.Edu (Bill R. Core) wrote:

>How can one in the States get the latest version of S.A.M.?
>How does it compare to Diamond?
>And what applications are available or are being written for it?

(I don't own S.A.M. so I can't make a comparison with Diamond.)

The following is from the DGS online catalog. DGS can be accept payments
in US cash. I've made a purchase from them before, no problem.

S.A.M. COMPLETE PACKAGE:
========================

Screen Aided Management (SAM) is a new 80 column desktop environment for
the Atari XL/XE. SAM is very much like some other systems of this type
found on computers like the ST, and IBM PC.

SAM is based around a main environment, where you have standard DOS
functions (such as DIRECTORY, FORMAT, DELETE, etc.), but also contains
some special utilities. The SAM system can be controlled by using a
joystick, or (even better) an ST compatible mouse!

SAM is supplied with monochrome and colour character set editors, a card
filing system, a monitor (for looking into memory), an 80 column word
processor, a 128-colour paint program, and (for the international version
only) a game called FireBall which runs under SAM. Although SAM uses 80
columns, it does not need any extra hardware to do this! The SAM system is
extendable by special accessories which are also available (see below).

SAM is supplied on a SS/SD disk which contains everything mentioned, along
with a 26 page manual, which also explains how to use SAM routines in your
own programs.

SAM BUDGET is an accessory disk for use with the SAM 80 column desktop
system. Budget is a spreadsheet program having many excellent features
found on more expensive systems. Budget takes full advantage of SAM's 80
column display, and mouse and joystick input. Features include Direct
Calculations, Indirect Calculations, and Functions (single or multiple
parameters). Budget also has advanced editing facilities, including column
and row copying and deletion, and easy movement around your spreadsheet.
Budget is able to print to both Epson compatible and 1029 printers. Budget
is supplied with a comprehensive jargon-free manual, which is helpful for
those who haven't used a spreadsheet before.

SAM UTILITY EXTENSIONS 1 is another accessory disk for use with the SAM 80 column desktop system. This disk actually contains two accessories: SAM Convert and SAM Creator. Convert will convert text files to and from the SAM Texter format. Convert will convert from ASCII, AtariWriter, StarText, and AustroText to SAM, and from SAM to ASCII. Creator will convert SAM Painter format files to Micro Painter format and vice versa. These two accessories an extremely useful tool for SAM Texter and Painter users. Supplied with a user manual.

SAM DESIGNER is a powerful drawing and design package for creating mode 8 high resolution graphics. As well as all drawing features, Designer can import text from SAM Texter (which comes with SAM), and has a set of schematic icons for creating circuits. These icons can be easily edited using the SAM character editor (which comes with SAM) to whatever icons you want. All options are icon operated, and the package works with both joystick and ST mouse. Screens can be printed on Epson and 1029 printers. You can write drivers for other printers using the instructions given in the manual. The package comes with an easy-to-follow manual.

The COMPLETE S.A.M package including the main system, Budget, Utils 1, AND Designer now costs just #14.99 INCLUDING P&P.

4304. WTT : Atari stuff for other Atari stuff

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-17 00:00:00 UTC
From: Vidar Olavesen <olavese@online.no>
Message-ID: <01bd0b1e$d667e760$4e374382@hawks-pentium>
Source record: 67828
Cross-posted to: alt.atari-jaguar.discussion,comp.sys.atari.8bit

I have the following 7800 carts :
One on One, 3 in box (1 SW) and a loose cart
Mat Mania Challenge, 2 (1 SW)
Jinks, 2 (1 SW)
Ace of Aces, 1 SW
Meltdown, 1 SW
Asteroids, 2 in box (1 without manual)
Ninja Golf, 2 (1 SW)
Centipede, 2
Tower Toppler, 3 (1 SW)
Barnyard Blaster, 1 SW
Donkey Kong
Real Sports Baseball, 1 SW
Winter Games, 1
Midnight Mutants, 1 SW
Pole Position II, 1 SW
Ballblazer, 1 SW
Hat Trick, 3 (1 SW, 1 loose cart)
Ms. Pac-Man, 1
Crack'ed, 1 SW
Joust, 1 SW

XL/XE carts :
Pole Position, 2 SW

XL/XE tapes :
180, 1
Speedhawk, 1
Panther, 1
Twilight World, 2
Milk Race, 1
Star Raiders, 1
Bomb Fusion, 1
Henry's House, 1
Rockford + Crystal Raider, 1
Protector Mastertronic (Not the Synapse game), 1
Kikstart, 1
Revenge II, 1
L.A. SWAT, 2
Ghostbusters, 1
Ninja, 2
Sidewinder II, 1
Speedzone, 2
Universal Hero, 1

Pengon, 1
Tail of Beta Lyrae, 1
Heartache, 10+
Escape from Traam, 1
Football Manager, 1
Despatch Rider, 1

Jaguar games :
Baldies CD, 1
Val d'Isere Skiing and Snowboarding, 1
Troy Aikman Football, 1
White Men can't Jump (without Team Tap), 1
Iron Soldier loose cart, 1

VCS 2600 PAL :
Breakout, 1
Warlords, 2
Video Olympics, 1
Realsports Volleyball, 1 SW
Combat loose cart, 1

I don't have to have 1 for 1, so offers like Iron Soldier and Troy Aikman for Supercross 3D will be accepted. Give me some offers. Also interested in PAL 7800 games and console. Take Atarian care

>

QUOTED TEXT FOLLOWS:
David Moeser said:

'A worse scenario would be this: a newsgroup is
unmoderated but certain sponsors or leaders of the group try
to enforce a theoretical ban on the posting of for-sale
messages by frequently posting reminders quoting the group's
official policy. I've seen newsgroups like that and the
result is worse than the situation we've already got here.
When for-sale ads are posted, which is inevitable, the
sponsors post flurries of counter-messages, which then
provoke debates on the issue, which deteriorate into flame
wars. The upshot is that a group might as well be either
moderated or unmoderated; an attempt at a middle ground
isn't likely to work out well.'

END QUOTE

Then I said:

On 15 Dec 1997, James R. Gilbert wrote:

->Sid Pacman (aka David Moeser): Feels that someone posting
->complaints about auctions is wasting bandwidth, everyones
->time (I take liberty of interpreting what David said.) But
->he doesn't feel the multiple, frequent, cross-posted, off
->topic, large volume AUCTIONs are a waste of bandwidth and
->time. Or feels nothing should be done about it.

Then David M. Said:
QUOTE:

This is so far off base compared to what I've posted that it's
funny. What I actually referred to was all the extra verbiage
because of the complaints-about-complaints-ABOUT-complaints about
for-sale postings in an unmoderated group where such postings are
legal but frowned on. (Is that clear?!) If anybody wants to see
for themselves, tune in to the vinyl LP group.

END QUOTE

David, and the group. I apologize for mis-interpreting what
you said. And No, I still don't understand. But that's
alright, I frequently mis-interpret what people say.

It's been educational, this thread. I learned that 90% of
posts are lost on MS Network and that 2/3 of posts are spam
related at Dejanews.

Thanks for the discussion.
Russ

4308. 8-bit ROM/disk images almost available

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-17 00:00:00 UTC
From: Mike Kohary <mkohary@serv.net>
Message-ID: <679esg$q3i$0@dosa.alt.net>
Source record: 67832

For those of you who weren't reading the thread I responded in earlier, we had been noting that Atari 8-bit disk and ROM images are no longer anywhere to be found on the Web. I had offered, if anyone wanted to contribute any images they had, to set up a place on my web site where they could be accessed by all. I have unlimited storage space and bandwidth, and so am easily capable of supporting such an archive.

Well, one very generous gentleman from Mexico has apparently archived everything that was available at Yogi's old site. He very kindly sent me 6 disk images (and I think he has more to send), each with maybe 50-75 games on it. The 6 images are in .ATR format.

Problem: I am unable to load these disk images into either Rainbow or XL-It. They are each over 1MB in size on my hard disk, and I suspect that's too large for these emulators to load. I don't believe I'm doing anything wrong in the emulators (although if anyone thinks differently, please feel free to give me tips).

Of course, I want to make sure these images work before I post them. Any suggestions? Maybe there's a way to break them into smaller images, or even (preferably) individual game images? Or is there indeed a way to load them as is, and I'm just missing it?

Thanks in advance for any help. As soon as I get these to work, I'll start posting an archive on my site, and will let everyone know where to find them.

Mike

I think it would be a mistake to moderate this newsgroup or untowardly complicate it with various rules, protocol, restrictions etc. Since it is not a binaries group, and there is a binary group for us, that is about the only thing that shouldn't be in here. Hell, I don't even mind a few small binaries in here from time to time. As to the auctions etc, I just filter or ignore them. Sometimes, admittedly rarely, I actually READ some of that auction stuff.

******************************************************
===============VINTAGE MICRO-COMPUTERS===============
============EMAIL: Vintage_Micro@yahoo.com============
******************************************************
Hi Computer Lovers,
I just wanted to thank everyone who has placed an order with me, this
is really the only way I can afford to keep my hobby going, and
sometimes help with a bill or two. It also warms my heart to see so many
fathers buying games or machines for their children on Christmas. Lets
bring in a new generation!
Anything on this list I will accept trades for Amiga items. The
proceeds enable me to further my beloved hobby and also help others who
collect/use/love old micro-computers. Of course my main love and area of
expertise is the C64. I am in the process of moving into the world of
the Amiga.
You will notice that I am trying to be as detailed as possible about
my listings. I am a collector and have been buying items online for a
while and I really wish everyone would list in a detailed manner. It
definately makes it easier on the customer, so that they can decide if
said item is useful to them or not. I will also try to answer as many
questions as I can about each item listed.
This list keeps expanding(so check it regularly or request to receive
updates via email). Email me your orders and I will process them as fast
as I can. To make the transaction faster, please email your address with
your order, that way I can calculate shipping and give you a total.
Also... if you wish to receive future lists by email, send me email
with the word "subscribe" in the subject line.
Please enjoy and Happy Holidays to all!

======ATARI====ATARI====ATARI====ATARI====ATARI======
======ATARI====ATARI====ATARI====ATARI====ATARI======
------------------------------------------------------
------------------------------------------------------
****************ATARI 8 BIT SOFTWARE*****************
------------------------------------------------------
TITLE: Ultima IV - Quest of the Avatar
PUBLISHER: Origin
REQUIREMENTS: Atari 400/800,XL's, XE's and a 5.25 in floppy drive.
NOTES: This is one of the best series of games that has been on just
about every computer platform at one time or another. This game is
considered to be rare. The box is intact, although one corner is
slightly bent. Everthing is in the box except for the metal Ankh. The
cloth map is pretty groovy just for hanging on your wall.
```

PRICE: Well this is the difficult part for me. I am honestly not sure if I want to sell this since the Ultima games are my very favorites, and also due to the fact that the game is so hard to find. If I get an offer that sounds good I will sell this or even possibly trade it for C64 or Amiga items.
So go ahead and make a bid.

TITLE: Atari Basic Cartridge (cxl4002)
PUBLISHER: Atari
REQUIREMENTS: Atari 400/800,XL's, XE's and an open cartridge slot.
NOTES: You need this to use Basic on most Atari 8 Bit Computers.
PRICE: $4

TITLE: Educational System master cartridge (cxl4001)
PUBLISHER: Atari
REQUIREMENTS: Atari 400/800,XL's, XE's and an open cartridge slot.
NOTES: The cartridge seems to be the operating system for some sort of school/institutional teaching system. Apparently there are supposed to be some tapes (data) with information on them to use in conjunction with this software. So this is just the cartridge, nothing else. This should be something for that 8 bit atari collector that thinks he has everything.
PRICE: $2

TITLE: Pac-Man (cxl4022)
PUBLISHER: Atari
REQUIREMENTS: Atari 400/800,XL's, XE's and an open cartridge slot.
NOTES: The arcade game of 1 hungry little spot with an aversion to ghosts!
PRICE: $5.25

TITLE: Star Raiders (cxl4011)
PUBLISHER: Atari
REQUIREMENTS: Atari 400/800,XL's, XE's and an open cartridge slot.
NOTES: Space type arcade game
PRICE: $4

January 1987 Issue 43, Vol. 5, No. 1
PRICE: $1.50 each

**********COMMODORE RELATED SOFTWARE**********

==========APPLICATIONS==========
TITLE: Desktop Publisher
PUBLISHER: Swift/Cosmi
REQUIREMENTS: Commodore 64\128 computer, 5.25 in. floppy drive
(1) 5.25 in. Floppy
NOTES: This is a very flexible Publishing program that enables the user to make Newsletters, Banners, Cards, Labels, Certificates and more. Comes with a manual and box(Box slightly crushed but intact). A useful utility.

PRICE: $5

TITLE: Fast Load Cartridge
PUBLISHER: Epyx
REQUIREMENTS: Commodore 64 computer
Cartridge
NOTES: This is the "famous" cartridge by Epyx that has a DOS wedge.
Handy and easy to use. No manual, but there are docs on the web for it.
PRICE: $10

TITLE: Introduction to Basic: Part 1
PUBLISHER: Commodore Electronics, LTD.
REQUIREMENTS: Commodore 64 computer
(2) Tapes
NOTES: Basic tutorial with many programs: "Testcard", "Hangman",
"Speedtype", "Unit3Quiz", "Unit4drill", "Unit5quiz", "Sentences",
"Unit7quiz", "Unit9prog", "Unit9quiz", "Unit10quiz", "Unit11prog",
"Unit12quiz", "Sound Demo", "Heads", "Reaction", "Esg", "Craps". There
is no manual or book for these tapes.
PRICE: $1

TITLE: The Kawasaki Rhythm Rocker
PUBLISHER: Sight & Sound Music Software
REQUIREMENTS: Commodore 64 computer, 5.25 in. floppy drive
(1) 5.25 in. Floppy
NOTES: This is one hot music composing and playback program that also
puts some very psychadelic/space graphics on the monitor in sync to the
music. Features an easy to use multi-track recording capability and a
variety of percussion and synth sounds. Complete in box with
manual(Plastic case type box is in excellent condition). This is
recommended!
PRICE: $7

TITLE: Music Composer
PUBLISHER: Commodore Electronics, LTD.
REQUIREMENTS: Commodore 64 computer
Cartidge
NOTES: This Cartridge helps the user play music on the C64 using the
keyboard and also you can write songs and play them back. Comes with
manual and original box (box is slightly crushed but intact)
PRICE: $6

TITLE: OKIMATE 10 Learn to Print
PUBLISHER: OKIDATA
REQUIREMENTS: Commodore 64 computer or Commodore SX-64 or Commodore VIC
20
(1) Tape
NOTES: This is a "How to" print tutorial.
PRICE: $1

==========GAMES==========
TITLE: 221 B Baker St.

PUBLISHER: Datasoft
REQUIREMENTS: Commodore 64/128 computer, 5.25 in. floppy drive
(1) 5.25 in. Floppy
NOTES: This is the Sherlock Holmes adventure game. Very fun and challenging. Comes with manual, case book, and the solution checklist.
PRICE: $3.50

TITLE: Championship Wrestling
PUBLISHER: Epyx
REQUIREMENTS: Commodore 64/128 computer, 5.25 in. floppy drive
(1) 5.25 in. Floppy
NOTES: This game is great fun. An Awesome wrestling game, over 25 moves to enjoy, 8 crazy wrestlers, throw your opponent out of the ring, move up till you get the belt, up to eight players. In box with manual(Box is in great shape).
PRICE: $6

TITLE: Flight Simulator II
PUBLISHER: Sublogic
REQUIREMENTS: Commodore 64 computer, 5.25 in. floppy drive
(1) 5.25 in. Floppy
NOTES: This is one of the best Flight Simulation games made for the C64. Complete with manual and box(box is slightly crushed). Very detailed. Highly Recommended!
PRICE: $7

TITLE: The Gates of Dawn
PUBLISHER: Mastertronic
REQUIREMENTS: Commodore 64/128 computer, 5.25 in. floppy drive
(1) 5.25 in. Floppy
NOTES: A very well done 3d fantasy RPG type game. Nice graphics and lots of monsters to fight. Comes in a plastic case complete with manual. Very cool.
PRICE: $5

TITLE: Temple of Apshai
PUBLISHER: EPYX
REQUIREMENTS: Commodore 64 computer, Data cassete
(3) Tapes
NOTES: This is the famous game Temple of Apshai, an early dungeon type game. I remember playing this for hours as a kid. This comes with a box, all documentation, and 3 tapes. Highly collectable peice.
PRICE: Trade Only.

TITLE: GFL Championship Football
PUBLISHER: Gamestar/Activision
REQUIREMENTS: Commodore 64/128 computer, 5.25 in floppy drive
(1) 5.25 in floppy
NOTES: This is Football game that has many cool options, such as: 4 or 7 min periods, 1 or 2 player, drafting your own team and more. This game comes with a manual no box.
PRICE: $4

TITLE: John Elways Quarterback
PUBLISHER: Micro League Sports Association
REQUIREMENTS: Commodore 64/128 computer, 5.25 in. floppy drive
(1) 5.25 in. Floppy
NOTES: Just like the arcade game. Fast and furious arcade football
action. With box and manual(Box is in great shape)
PRICE: $6

TITLE: Micro League Baseball
PUBLISHER: Micro League Sports Association
REQUIREMENTS: Commodore 64 computer, 5.25 in. floppy drive
(1) 5.25 in. Floppy
NOTES: This is one of the best Baseball computer games made for the C64.
No manual or box.
PRICE: $4

TITLE: Micro League Baseball General Manager/Owners Disk
PUBLISHER: Micro League Sports Association
REQUIREMENTS: Commodore 64 computer, 5.25 in. floppy drive, a copy of
the Micro League Baseball Game Disk.
(1) 5.25 in. Floppy

TITLE: Omega Race (vic-1923) PRICE:$4
PUBLISHER: ----------Imagic----------
TITLE: Demon Attack PRICE:$6

**********COMMODORE RELATED HARDWARE**********

ITEM: VIC 20 Power Supply
DESCRIPTION: Small black VIC 20 Power Supply, old style with small two
prong female plug.
REQUIREMENTS: A VIC 20 computer
NOTES: Tested and works fine
PRICE: $5

ITEM: X1541 Cable
DESCRIPTION: This cable enables the user to hook-up a 1541 drive to the
parallel port of you PC to transfer files (Like the ones you got off the
web)

REQUIREMENTS: A 1541/1571 or compatable drive, A PC with a parallel port, a copy of Star Commander (available all over the web, just do a search)
NOTES: I have been transferring files from my PC to my commodore 64 for about a year and a half now. To make things easier I now have a 1541 drive attached to my PC at all times. I make these cables myself. They look good and are durable. They are also tested prior to shipping. I can make these in custom lengths (not to exceed 4 feet).
PRICE: $12

ITEM: Serial Cable
DESCRIPTION: You need one of these to use your floppy drive and your commodore printer.
NOTES: I make these custom so you may specify a particular length you require (not to exceed 4 feet). They look good and are durable. They are also tested prior to shipping.
PRICE: $8

==========FLOPPY DRIVES==========
ITEM: Commodore 1541 Floppy drive
QUANTITY: 3
DESCRIPTION: 5.25 inch floppy drive (serial)
NOTES: Drive powers up lights come on. yet drive does not work, more than likely an alignment problem. You may be able to re-align these by using software and documentation Via the web(I have been lucky on several occasions doing this), I just simply do not have the time to mess with these. Worse comes worse they can ban used for parts for another ailing 1541 drive. No power cable included(you can pick these up at Radio Shack or most computer stores).
PRICE: $5 each.

ITEM: Commodore 1541 Floppy drive
QUANTITY: 2
DESCRIPTION: 5.25 inch floppy drive (serial)
NOTES: Drives work great. No power cable included(you can pick these up at Radio Shack or most computer stores).
PRICE: $15 each or $20 with a power cable.

==========JOYSTICKS==========
ITEM: Wico Command Control
DESCRIPTION: This is a high quality joystick that has a fire button on the base and one on top of the stick with a selector to switch between the two. A great joystick that has an excellent feel to it, definately a tool for the pro-gamer. Very clean!
REQUIREMENTS: For use on most 8 bit commodores and 8 bit atari including the atari 2600
PRICE: $5.00

ITEM: Competition Pro Joystick
DESCRIPTION: This is a high quality joystick that has two buttons on the base(for left or right hand players not fire button A or B). Definately a tool for the pro-gamer. Durable construction and very clean.

REQUIREMENTS: For use on most 8 bit commodores and 8 bit atari including
the atari 2600
PRICE: $4.50

ITEM: Wico Black Max
DESCRIPTION: Small mid-quality joystick with a fire botton on top. Works
great and clean.
REQUIREMENTS: For use on most 8 bit commodores and 8 bit atari including
the atari 2600
PRICE: $3.00

ITEM: Gemstik
DESCRIPTION: Small mid-quality joystick with a fire botton on base.
Works great and clean.
REQUIREMENTS: For use on most 8 bit commodores and 8 bit atari including
the atari 2600
PRICE: $2.50

======VINTAGE MAGAZINES=======VINTAGE MAGAZINES======
======VINTAGE MAGAZINES=======VINTAGE MAGAZINES======

TITLE: Kilobaud MICROCOMPUTING
ISSUES: Feb. 1980, March. 1980, Feb. 1981, May 1983
NOTE: Wow! These magazines are a RARE find! They were published in the days where real men built their own computers from Kits (Remember Heath Kits?), after market boards, and even by scratch. These magazines are a veritable goldmine of information and nostalgia. Very cool old micro-soft ads (When M-Soft was a small player in the feild), and the Apple computer ads that consisted of a pc board and no input or output devices (had to build your own apple!). WOW! My highest Recommendation!
PRICE: $5 each

**********SHIPPING INFORMATION**********

Customer is required to pay all shipping charges. Just send me your name and address with your order and I will calculate shipping. Most books (if they are not too heavy) I can send priority mail (3 day) for about $3 anywhere in the Continental US. Also please note that some days I am rather busy, so give me a couple of days before I ship (I will always try to ship day of order, but I do have a full time job.)
Checks(I will accept personal checks but I must wait til they clear the bank before shipping) or Money Orders must be made payable to Jon Lucas.
Please Send all orders to: Vintage_Micro@yahoo.com not (jonart@ix.netcom.com)
If you are interested in receiving this catalog plus future updates and auctions Please send email with the word "Subscribe" in the subject line.
Thanks and Happy Holidays to all!

Source record: 67751

Hi Everyone,
Currently, I am working on a little magazine for older computers(mostly commodore and atari but all others are welcome to) to help support users out there. There seems to be alot of support for older systems just not in one place. I want to do features and listings on web-sites, companies, individuals who support these older machines. I would like to have articles on hardware upgrades and modifications for these machines along with new and innovative software. I will also provide very low cost advertising for those who wish to sell their hardware/software new or used. I think I can publish it quarterly with no problems. The format will be simple and cost effective for me to produce, 8.5in by 11in pages folded in half(booklet form), and will hopefully have at least 16 pages. I have not figured out a price for this yet but more than likeley about $1 will pay for the printing and the postage. I will be taking submissions for articles right now. They can pretty much consist of anything(reviews, opinions, programming, hardware modifications, and most importantly getting these machines online.) All submissions will get proper credit! Also I am in need of a name for this mag, so please send in your ideas!
Please send all submissions to: Vintag_Micro@yahoo.com

I hope something like this would be of interest to others.

Thank You,

Jon

As far as the advantages of the 65816 (and compatables) there is an advantage due to the instruction set being larger. This means that ML programs could be written smaller taking up less room in the memory and therefore would also run faster. This also means more routines would fit in memory and therfore the software could have more features. Speed increases would be an added plus.

4317. Welcome to comp.sys.atari.8bit!

Newsgroup: comp.sys.atari.8bit

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

Edward,
Yes that is correct. That happened aroung 1984, I believe. ICD then
sold the 8-bit product line to Mike Hohman of Fine Tooned Engineering.
Since then we know what has happened with that product line, if
anything. Most likely dead. (Hope not!!!)

4319. Pseudo code for a excessive post 'monitor'

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-18 00:00:00 UTC
From: cb541@cleveland.Freenet.Edu
Message-ID: <67bk02$81p$1@alexander.INS.CWRU.Edu>
Source record: 67755

```
begin

postsize=x

if x>5000 then record entire post, including all headers in
in bot.file record.

end

periodic bot.file check:

check bot.file

get record
compare to all other records
is there another post from this source?
if no then
is record > 9 days old?
if so then delete record
end if
if yes then
send notice
end if

get next record

end

(The above should be fairly sophisticated in determining
the source of the post, not just use the 'From:' address.)

notice:
This is a bot from a news administrator, sent in the
interest of Internet Service Providers on the internet.

If you sent two or more fairly large posts to comp.sys.
atari.8bit in the last nine days, then please be advised
that comp.sys.atari.8bit is a discussion group about the
Atari 8-bit computer and binaries or other large posts are
not in keeping with the nature of the group. You are
welcome to participate in csa8, please come again. Please
read the csa8 FAQ. Where to get the FAQ is posted weekly in
'Welcome to comp.sys. atari.8bit'. We apologize for the
intrusion. You cannot respond to this message.

There should be a return address from the bot message which
just gets deleted, or gets a quick look over once in a while
by the bot keeper.
```

Russ
(Above prepared in advance.)
The nasty part comes in actually cancelling posts.
That could be done by a news administrator. In the interests
of ISPs and Usenet. But I really doubt it would be
necessary once the messages to cross-posters, large,
frequent posters, when out.
I imagine the large posters would scream bloody murder actually.
And some cancellations might have to occur, or they would
just ignore the bot. But this is something for usenet administrators
and ISPs to do. Dejanews has installed a cancellation scheme
for their site.

[snip]
The other issue here is that not everyone gets free local calls. For
those of us who don't every extra minute we spend on-line adds to our
phone bill. In this situation, given the choice between spending 30
minutes reading a group on-line, or 5 minutes downloading it and 30
minutes reading off-line, the second is the more economic option,
regardless of ISP pricing policy and disk storage.

>the Atari's IO port. Which port on the 1010 should I connect the cable
>to? I would appreciate any replies to this post.
>
>Craig Henrichs
>

The most logical way that I know to save a program to tape is to
use the CSAVE command and use CLOAD to load it unless you hold the
START button from coldboot. As for the ports on the 1010, it doesn't
matter which one you use because the other one was put there to
continue the chain of hardware connections

Hope this helps
Jim

Maybe every Podunk in the USA does, but people in other countries might
not be so lucky. In some places they even have to pay by the minute for
local phone calls.

(How many files in the archive DO have descriptions?)
The zmag*.arc files were an all-text magazine. Some early issues used
ATASCII graphics, but mostly they were pure ASCII. If there is room to
store them in unarced form, people could browse them on-line; maybe with
a little editing they could even be made into HTML. I wonder if any of
the former writers or editors read this newsgroup.

I have a cart made after ICD took over OSS. I'll check it out again tonight, but I think it allowed some opcodes that the earlier versions didn't. These were codes that wouldn't work on the old 6502s, but did work on newer processors that I think never made it to actual Ataris. Unconditional branches and other stuff. I never used those opcodes.

As far as the proceedure you followed (heard beeps > pressed play and record) you need to after hitting the play and record buttons strike a key (like return)

Also be certain that the tape is leaderless or preadvance the tape so that the tape leader is past the point where the head makes contact with the pressure pad (usually a small white or tan fuzzy pad) at the center of the open side.

First I do agree that since the group is unmoderated that the
for-sale postings are permissible, but they should be filtering out
those items that are not Atari related. i.e.: Vic 20 carts

As far as the usage of your real name, that was an issue that the user group BBS that I am currently president of struggled with long ago. When someone decides not to use their real name it detracts credence from their posting, and allows for deceptive actions on that persons part (since the person is somewhat shielded by anminity) Now I am not saying that you personally would do this, since your motivation is to shield yourself from unscrupulous actions of others, but the point is that spammers will always be around, but if you bring this situation to the attention of the system administrator of your system, they can and do have the clout necessary to make this particular individuals life difficult and at the same time you will be helping to stop or at least slowdown this persons activity from affecting others.

Let me see if I can remember this - it's been 9 years since I used a
recorder on my 8-bit...

A single buzz indicates the recorder is being opened for a READ operation.
You want a WRITE operation, and two buzzes. Check the OPEN statement in
your BASIC program. It should read
OPEN #n,8,128,"C:"
The 8 signifies the WRITE operation, and the 128 (if I remember correctly)
sets the short IRG. (Inter Record Gap) If there's a 4 where the 8 is, the
recorder will be opened for a READ.

I think that is more likely your trouble than a bad recorder (although the
410 isn't known for its longevity). Once you get the two buzzes, press
PLAY and RECORD on the recorder, then press RETURN and things should start
working.

It's a good idea not to use those opcodes to ensure compatability
with the existing computers and emulators.

I had a "Perusing the Internet" column in the very last few issues. Just
collections of postings from comp.sys.atari.8bit.

I'm also responsible for collecting most of those Z*Mag issues from
various sources and putting them on UMich to begin with.

If you unarc them you'll find the cr/lf's are in several formats,
reflecting the varied sources of where I got them from. I did all the
cleanup once: They're all available in plain ASCII text on the Cleveland
Free-Net Atari SIG.

4343. File transfers...

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-19 00:00:00 UTC
From: Stanley Lackey <lackey@segosf.hlo.dec.com>
Message-ID: <y12pvmt9oyt.fsf@mingua.hlo.dec.com>
Source record: 67779

I have a friend who needs to transfer files from an apple2gs. He wants to get them to a PC. On the apple2 group I got a suggestion that a serial line be used, but my friend has no serial port on the apple.

I am able to transfer from Atari to PC... so I was wondering if there is a way to either read apple2 disks on the atari, or write atari format on the apple.

Any help is greatly appreciated! -Stan

A 65816 can utilize the newer instruction set and a linear address space
of 512K. Even at 1.79mhz, it would improve performance. And, it's simple
to do. The 7.18mhz hack is a lot harder but it does offer high
performance without any coding or tricks. A 14.36mhz 65816 could run 12
times faster than a stock Atari with no code changes. That's pretty
significant, but it's a tough hack.

well, I kinda pick up the OSS Basic from Mike, so I guess it is not
dead. i really don't know if that includes the extentions or not - it
isn't like we would sue or anything. not that Basic/XL/XE is PD yet.

Dunno, Stan. Is your friend SURE that there's no serial line on the 2GS? I remember the //c having both a modem and a serial printer port (all Apples went to serial printers, and I believe the Macs still do.) Both had wierd connectors -- I believe they were 5 pin DINs, similar to what is used for MIDI today. And yes, I was able to transfer to and from both my 8-bit Atari and my PC from the //c using null-modem connections.

I've never seen the back of a 2GS, but it seems to me that you'd be looking for an icon of a telephone receiver stamped into the plastic above one connector, and an icon of a printer stamped into the plastic above the other. Now, it could be that in the 2GS the connectors were changed to 8-pin mini-DINs, because that's what Macs of that generation began to use.

About reading 2GS files on an Atari drive -- well, that's going to be difficult. Apple used a completely different track and sector layout, as I remember it.

I hope somebody else can shed more light on this situation. Guys?

Very cool. Now, how come this isn't linked from anyone's Atari page? I
swear I looked high and low....

I've been able to solve my problem via the menu program (and also found
out about which disk image to put where to access them through DOS).
I'll have that web site up shortly.

If you have the space, consider making the individual EXE files
available as well. I believe they are all at the ageis site w/
long filenames already assigned.

It is too, you obviously haven't seen my page yet:
http://www.co.umist.ac.uk/~rje/8bit/atari.html

There are over a 100 links there to many things concerning the 8-bit
Atari. The links should be up to date (if you find any that aren't
then let me know). Granted the links are in no particular order, and
hence hard to find the particular one you are after, but this might
change when (if?) I get some free time. Also if anyone sees a site
that is missing from my page, then let me know and I'll add it.

While I'm posting about my web-page, you can also download my new
ramdisk program from there (plug, plug), or if you prefer, it is now
up at the umich archive too. Let me know what you think about it.

Nice list! I hadn't seen this before. I'd say you have about the most comprehensive list of Atari 8bit links I've seen yet. Most of the pages I've bookmarked seem not to have been updated for a while. Very much appreciated!

Mark

I think the .forsale group is a good idea. However, I'm a bit concerned
that the discussion has mostly centered around large auction posts and posts
that are slightly off topic (commodore forsale! etc..).

I would prefer to see a motion to get rid of all the crap posts that go
through here. Anything that does not relate to Atari should be trashed.
No more XXX sites, or bulk emailers. No more make money fast schemes.
However, how you remove those posts could be a problem. It would be
impossible to catch all those posts on a non-moderated group before at least
some people saw them. Also, I wonder if there are any legal concerns about
deleting someone else's posts.

Personally, I don't mind seeing the auctions here. And I would probably not
visit .forsale as much as this group. However, I am 100% for removing any
post that doesn't relate to this groups name.

Although you need to be nice to people who post about the 2600 and or the
ST's.

Howdy folks

I know I've asked a simular question
before, but...

In the BEST Elektonics Catalog
Rev.10, on page 95, they mention a
XE/XL Service Center Diagnostic
Hardware Kit.

How usefull is this stuff???

One of my XEGS never worked. I
believe it shows a red screen (it's
been a while since I tried it out).
But NO selftest or READY prompt.

And my 130XE seems to have developed
PBI bus (where you plug in the
BlackBox and your carts) problems.
It worked OK after the modification
Bob Puff has developed (it's called
STABLXL.???), and I had already
replaced the "mexico" CPU. I do
believe I shorted one of the joystick
ports pins 7 and 8 once. And one of
my (standard ATARI) power supplies
went bad while it powered the 130XE.
People told me, certain chips,
especially the CPU don't like power
spikes. (This power supply first
developed the habit to drop power to
the level, where my screen turned
spinage green. But after a while,
power would also sometimes jump up to
11 (yes, ELEVEN) Volts. Which would
show up at the screen as white
lines.)

So, the question is, how handy is the
above mentioned Diagnostic Kit with
problems like these???

CU Mathy Van Nisselroy

The ".nl" address don't work
I probably won't get to my ".de"

address untill after New Year.

4377. Atari Lab Loaner Auction (Update #5)

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-22 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19971222035201.WAA03635@ladder01.news.aol.com>
Source record: 67713

The following are authentic Atari Lab Loaners with Lab Loaner labs, untampered with dates or lot #'s, these are not cheap eprom copies in blank cases.

Rules:

1. Auction will close at Midnight 1/15/98
2. Winners are responsible for shipping charges
3. Items will be shipped USPS Priority Mail
4. Items must be paided in advance with check or money orders, absolutely no cash!
5. Updates will be emailed to all bidders once a day, updates will be posted in the newsgroups once every 3-4 days to avoid clogging the newsgroups
with posts
6. I reserve the right to pull any item at anytime
7. Bids will be made in $2 increments

Note: Although items are up for auction, items are all available for trades, I am interesting in anything made by or made for Atari systems including 2600,5200,7800,Jaguar, computers and coin-op.

Item Description Bid Bidder

1 Socerer's Apprentice 3-28-83 $100 Mao
2a Alpha Beam Ernie 5-16-83 $100 Mao
2b Alpha Beam Ernie 5-16-83 $20 Rikard
3 Moon Patrol (Blue Lab Label) 6-2-83 *TRADED* to BlueSky
4 Donald Duck Speed Boat 4-12-83 *TRADED* to Kprodzin
5 Haunted House $100 Mao
6 Cookie Monster (no date listed) $100 Mao
7 2600 Diagnostic v2.6s $100 Mao
7a 2600 Diagnostic (Secam ver.) 2.6s $100 Mao
8 Galaxian 074 $100 Mao
9 Kangaroo 4-14-83 $100 Mao

Also available for Trade (ONLY)

Texas Chainsaw Massacre w/manual *TRADED*
Halloween *TRADED*
Bachelor Party (New in Box)

Send all bids to cvendel@aol.com

Apple disks used GCR, which is why an IBM can't read Apple II disks without special hardware. Atari computers use FM and MFM. Commodore used GCR, not quite the same as Apple's, but maybe they have software that could read an Apple disk. Try comp.sys.c64.

4381. r: saving command for german "hotel" game

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-22 00:00:00 UTC
From: peter.schmitz@mbi-net.de
Message-ID: <349e3775.1396591@news.mbi-net.de>
Source record: 67717

Hello, fellow 8-bit-citizens!

having hunted through my old Atari 800 XL games once again, my son and me discovered a nice management simulation game called "hotel" developed by a team called Axis. I remember that game had be distributed by Ariolasoft, but that company has gone long ago. It's still fun to play, but through the years I forgot how to save a game (if you don't do so, you have to keep playing for days, and at the beginning of the game there is an option to continue an old game session). There's no menu option, so I guess it was some kind of hotkey that only works in a special game situation.
Any help (please send it to my e-mail address, too) is very much appreciated - especially by my son who asks me for playing "hotel" with him every day... ;o)>

Und das Ganze noch mal kurz auf deutsch: Mein neunjï¿½hriger Sohnemann und ich suchen dringend den Befehl, mit dem man in dem deutschen Management-Simulationsprogramm "HOTEL" von Axis den Spielstand speichert. Es gibt lï¿½ngst keine Dokus mehr dafï¿½r, und ich habe das Ganze ï¿½ber die Jahre schlicht vergessen (man wird halt alt). Am Anfang gibt es die Option, ein altes Spiel fortzusetzen, aber nirgendwo im Spiel wird die Mï¿½glichkeit zum Abspeichern angeboten. Es war wohl eine Tastenkombination oder so was, die man nur in einer bestimmten Spielsituation anwenden konnte... - jede Hilfe ist hochwillkommen, zumal mein Sohn mich tï¿½glich mit Bitten ums "Hotel"-Spielen angeht. Bitte schreibt auch an meine E-Mail-Adresse, da ich die Newsgroup nicht tï¿½glich beobachten kann.

Hi all,

One of my Atari 2600 carts does not play anymore.
It does not appear to be damaged, so I think it may have
collected some dirt or dust. The cart does not have screws
so it cannot be opened.
Does anyone know how to fix it ?

Thanks,

Marcel.

I would like to see for sale auctions, especially atari 8bit material.
(the non-Atari 8bit goes a little too far though) but I agree the get
rich, bulk e-mail, and unrelated stuff has to go, but I think the only
thing you can do is skip it, just like when you get junk e-mail. My
University won't allow disguising of email addresses for security reasons
(they don't want U of T students sending harrassing/illegal messages under
the shield of anonymity. I understand their point, but once you read ANY
usenet message bases, I get about 5-15 spams a day. Argh!

My school got the comp.sys.atari.8bit feed back! Woo hoo!

(turned out, we always had it, the e-mail reader got re-configured somehow
and this base was affected)

Ok,

I got my $1.95 trackball the other day and was itching to try it out.
First Missile Command and it worked great but I haven't been able to
find out any other games that supported this beast. I was very
disappointed to see that Centipede didn't have a trackball mode(atleast
not a CTRL-T switch).

So what games support the Trackball natively?

Also as an FYI I saw these same trackballs on another sight being sold
for $35.00!!!

>processors that I think never made it to actual Ataris. Unconditional branches
>and other stuff. I never used those opcodes.

It's a good idea not to use those opcodes to ensure compatability
with the existing computers and emulators.

Kenneth Jennings -- SyntheToonz -- Miami, FL
kenneth at daffy dot aatech dot com
ken at ntalr dot aatech dot com

The main difference between version 1.0 & 1.01 is that v1.10 handles the
syntax checking & compilation of the 65c02 expanded instructions. These are a
superset of the 6502 opcodes, "They should NOT be used in ANY software that is
intended to run on the Atari 8-bit, as they WILL NOT produce the desired
effect!". They include but are not limited to...

Branching:
(BRA) Branch Always

Increment/Decrement:
(DEA) Decrement Accumulator

(I NA) Increment Accumulator

Stack operations:
(PHX) Push Reg X on the stack
(PHY) Push Reg Y on the stack
(PLX) Pull Arg. off the stack placing it in Reg X
(PLY) Pull Arg. off the stack placing it in Reg Y

If you should find the need for opcodes like these. There are work arounds that you can come up with using the standard 6502 opcodes. Yes it requires more code to do it. Program execution time grows longer, but they can still be replicated with the standard 6502 opcode set.

Hope this helps some of you. Happy coding!

Ken Burgess

4399. BAD TRADER?: GLOBAL VILLAGE COMMUNICATIONS

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-23 00:00:00 UTC
From: zzyzx97@earthlink.net
Message-ID: <34b057b4.14964717@news.earthlink.net>
Source record: 67586

BAD TRADER?: GLOBAL VILLAGE COMMUNICATIONS

You be the judge. Earlier this year I bought a GLOBAL VILLAGE TELEPORT 33.6 Speakerphone/Fax/Modem. One of the reasons I chose this model is because I use Earthlink for an ISP, and they had promissed they would be upgrading their system to K56 Flex before the end of the year. K56 is the 56k modem speed standard developed and licensed by Rockwell Technology. The competing standard is X2 from U.S. Robotics (they merged this year with somebody?)

On the outside of the box my Teleport came in was a big sticker, under the shrinkwrap, put on by GLOBAL VILLAGE that said:

"UPGRADABLE TO 56KBPS
K56 Technology
Over 100 internet service providers connect using Rockwell Technology"

So 3 weeks ago I find that K56 Flex is now available for me, so its time to upgrade my modem. So I log on to Global Village's web site at:

http://www.globalvillage.com/

I find the link to the upgrade path for my modem and guess what?

They don't seem to support K56 Flex. The only upgrade offered is to X2.

Does that make them a bad trader? No, here is what does:

I Emailed them 3 weeks ago asking them if they were going to anything about their obligations to me as to my modem. So guess what happened? Nothing. No reply except for some computer generated response that came 2 seconds after I sent it saying they received my message.

So last week I Emailed about half a dozen different departments in the company including Corporate offices, and told them I would give them until today to respond to my original question. They did not respond in time, so here I am, spreading the story.

You wonder why I haven't used the telephone? They have no 800 number, except one for $2.00 per minute. Get serious. I've spent a fortune in the past with other tech companies waiting on hold until I get answered by some kid who asks questions off a questionaire. Always a waste of time and money. Hey, this company sells products for the "Information Super Highway". It's about time they start supporting it and using it as well.

As someone who also owns a IIgs, I can confirm they use the 8-pin
mini-DIN connectors for both serial ports.

>About reading 2GS files on an Atari drive -- well, that's going to be
>difficult. Apple used a completely different track and sector layout, as I

Not only that, but both the 5.25" and 3.5" 800K IIgs drives use GCR
instead of MFM encoding.

4401. Atari Fair Schreiersgruen 98

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-23 00:00:00 UTC
From: schallt@fh-worms.de
Message-ID: <67oa43rml1@widukind.fh-worms.de>
Source record: 67588

Hi to all,

98 will be the third Atari 8 Bit Fair in Schreiersgruen held.
Schreiersgruen is a little city in East-Germany near Zwickau.

The fair is held on the 21th of March 98. The place is the same as
every year (Wirtshaus Schreiersgruen). We had at the last 2 years
about 150 visitors and 20 trader. The people are very interested
in the Atari 8 Bit hard- and software.

At the fair will be the following people:

-RAF a regional group of the ABBUC.
They make the SIO2PC Interface, XFormer cable, 2-Computer Interface,
new power units for XL & 1050 and sell their do-it-yourself-kits.

-Highlander a Turbo Basic coder.
He has coded man utilities and nice little programms for many tasks.

-Charlie Chaplin a writer for german Atari 8 Bit mags.
He has a graet stock of new (old) games like Fight Night, Solar Star,
Dropezone, Antic Greatest... Also a great range of PD and Polensoft (
only one of many games).

-Me hardware fanatic
I will bring a little Atari 8 Bit chip libary to the fair, some soft
(Infocom Seastalker an others, EA Great American , SSI ...). 1050,
Floppy 2000, some Lynx and Jag stuff.

Possible but not sure:

-KE-Soft greatest Atari 8 Bit trader
He imports many prototypes and has the greatest Atari 8 Bit stock
in germany.

-Kaisersoft imports the most new Polen/Tzech software
When he is still alive, his last Top Mag issue has been out a half
year ago.

-People from the ABBUC
Technical References Manuals and PD at a great range.

-The Schreuers or other Atari 8 Bit fanatics from the netherlands,
Swiss, USA or West-German.

If you come from Germany and you are interested in further
informations about the fair E-Mail me. Other should look for another
text for the Fair in 98, there will be the phone number of Helmut

Weidner. Helmut Weidner is the number one in the organsation of the fair.

greetings to all true Atari 8 Bit User

E-Mail schallt@fh-worms.de

Termin Atari 8 Bit Messe Schreiersgruen

21.03.98

Die diesjaehrige Atari 8 Bit Messe 98 wird wieder in Schreiersgruen veranstaltet. Einige der Atari 8 Bit Haendler haben bereits ihr kommen angekuendigt, andere werden hiermit bei Interesse dazu aufgefordert.

Die Messe findet wie in jedem Jahr in einem 60qm grossen Raum in der Gaststaette in Schreiersgruen statt. Fuer die Besucher aus anderen Bundeslaendern gibt es ab der Autobahn Abfahrt eine Ausschilderung.

Wer bei der Messe einen Stand machen moechte kann sich bei Helmut Weidner erkundigen. !!!Die Telefon Nummer liefere ich noch nach!!!

In der englischen Version stehen bereits die Haendler die bereits zugesagt haben. Die Haendler unter "Possible but not sure:" haben noch kein Interesse bekundet.

Als Highlights gibt es wieder eine Verlosung, viele Raritaeten von Infocom und Co. (nah werdet Ihr Sammler nicht nervoes?). Auch gibt es Kleinigkeiten die man sonst nicht bekommt.

Gruss an alle wahren Atari 8 Bit Fans

William R. Cousert asked:

>Are there any interfaces for the 8-bit Atari's that will let them use the
>following: PC compatible floppy drives (5.24" and 3.5"), IDE hard drives,
>compatible serial and parallel ports, an SVGA monitor and PC compatible
>joysticks (I know they are analog, but perhaps they could be read as
>digital???)

With all that PC stuff, you might as well put them all in an old PC and run APE, the Atari Peripheral Emulator by Steven Tucker. I hope you have access to the web, so you can visit his page at http://seka.nacs.net/~classics/
APE allows you to connect an 8 bit Atari, even the old 800, to the PC using an SIO2PC type cable that goes from a PC serial port to the Atari's SIO port . I run APE on an old 386SX with all the things you've mentioned, except the joysticks. I still use the 800's joystick ports :). The main reason for APE though is the disk drive emulation. You can save all your old floppies to the PC (even protected disks with the optional PROSYS cable) as files that can be booted from the PC as if they were hooked to a very fast Atari disk drive. The PC modem is accessed as an R: device, and the P: can be sent to the PC printer or a file. There's so much more. I guess you can tell I like it. Hope you can check out his web site.

Only if you want to refresh half the memory. 256 cycles uses 8 address bits for refresh, 512 uses 9.

4405. Pushing the 19,200Bps limit

From: mvrankov@alf.tel.hr
Message-ID: <882897907.1367867416@dejanews.com>
Source record: 67593

Hi everybody!

I've recently decided to upgrade memory on my 1200XL, and after finding the mod needed I'm still stuck.

In the mod's docs, I've found just names of signals, but as I do not have any other HW docs or blueprints, I don't know where some of the points are.

Where the address lines are, is clear enough, aswell as PBx lines, but I really can't locate the following points:

MUX
RAx
-E
-Zd
-O1a
-O2b

Any hints?

Thanks,
Mike

Because you need a 9-bit counter instead of 8 bits. It would just need a
little more circuity, probably one more chip.

The Black Box can use 5.25" and 3.5" drives at 1.2 and 1.44M
(respectively) with the Floppy Board add-on card. Some Germans
are working on an IDE interface at this time, don't know the
status of it. Both the MIO and Black BOX can accept
MODEMS and printers meant for the PC with special cables sold
for the BB and MIO. SVGA Monitors, Apparently there are at least
three devices that will convert an NTSC signal to one that a
Multisync monitor would expect. They are: Instant TV, the
AVer TV genie, and the Proview TV. Which reminds me, I have
to give Best Buy a call on one of them, as I'd like to get a
decent 17" mutisync monitor for my 130XE!
I know of no mods to allow usage of PC controllers.
The CSS US+ can use up to 2 megabytes in a 130XE.

Note: Bob Puff of CSS is currently out of Floppy boards.
He is, however, creating a waiting list of anyone wanting one.
He needs 50 interested people before he can do any more
boards, as it is uneconomical to do any less. Let's have him
make some more, as I need one! The number for CSS is
(716) 429-5639. He is updating the code for the BB all the
time, as I understand.

Currently the Black Box and MIO can go no faster than 19.2kBPS.
Len Spencer's Hyperspeed handler gives both devices rock
solid hardware flow control at that speed. My Motorola 28.8
MODEM has been set to 28.8 sice soon after I bought it, it works
perfectly, so I see no reason to set it to 19.2.

Perhaps someone from Germany can update us on a modification to
the Black Box that will supposedly go at 57.6kbps!

I have taken a 130xe out of its old box and re-lived it.
I put it all back together.
When I insert a disk in the 5.25 floppy drive with a game and
then I turn on the computer, all I get is the READY prompt.
I have tried different diskettes and they all have the same
problem. Any suggestions?

Please mail to : Adiel@ix.netcom.com
Thanks in advance.

The game actually had pretty good grafx and decent playability for such an old game. It's probably one of the few games that looked bad on a PAL machine. It seemed like all the new latest 8bit games barely ran on a non-PAL 8bit. Was Double Dragon ever released for the European Atari 8bit? or was that a rumour us North Americans heard?

I am still looking for ANY decent version of ANY version of Double Dragon (wasted a life savings on that game was I was little) and so far I have yet to see it ported properly to any system (the 8bit nintendo version stinks, and the IBM PC port is even worse!)

> I still prefer "Bandits", anyone in Europe wanting to sell his/her

Adiel,
Tyr Holding down the START key while you trun on the machine. Keep
holding it down until you hear the Disk I/O sounds or the screen changes
from Black.

Why should he press START ? It's for booting tapes. Try OPTION to disable
BASIC. That could be the problem, but I don't think START key is helpful

I think you meant the OPTION key.

Adiel needs to be specific about if he hears/sees any disk access
at all. If not, then he should make sure the drive is

Connected to it's power supply and the power supply is
plugged into a power outlet.

Make sure the SIO cable is properly connected between the
drive and the computer.

Make sure the drive ID dip switches make the drive #1.

I've run out of ideas. Bye.

Are you using an XF551? if so they exibit this problem when they get bad solder connections on the SIO ports. Otherwise, make sure the disk drive is set to #1 as any other # will not boot.

What in the world would be the use of getting that speed with the modem?
Your 14.4 probably is outspeeding the processor already, and all you can
really do with the 8bit online is put text on the screen.

> "We must always try to push our technology to its limits"

Someone is always talking about IRC and web-surfing clients for the Atari
8bit, but no programmer really has time for such outlandish experiments.

Baloney.....you don't know what fun is till you handle all your
e-mails, download your documents from work and finish them, surf
the web......all from my easy to use 8bit! Sure, I don't have
java or frames, but who needs it. I'm talking about being able to
get things done and I don't need a 200mhz pentium, 3 gig hard
drive and 32 meg of memory to do it. Contrary to popular belief,
Bill Gates doesn't know everything. And, I've got a newsflash
for ya, using my 1/2 meg ramdisk, my computer is always waiting
on my 14400 modem. (of course, all this is possible because of
people like Itay and Len Spencer, Tom Hunt.....people who believe
this is still a viable platform)

David,
I happened to see this post with the attachment. I wasn't sure we were allowed to send attachments in this NG. I, for one, like this idea. Although some would probably have trouble with this. I grabbed it, BTW and could use something like this.

ALL,
Does anyone here have a problem with transfering binaries in this NG with posts? By problems I mean not wanting this to happen? I'm sure anyone accessing this NG via 8-bit computer or other non standard means could have data problems with this, but I like the idea. That is, as long as the attachments aten't too long or too many. The occasional short attachment could be useful in here. Foe major stuff and very long files, I'd still recommend web pages/ftp sites. What do you all think?

Nope, that should not be the problem. Instead, I'd look to what ID the
disk drive is switched. 8 Bit Ataris only boot from D1:, not from D2:
to D4:. The ID switches are accessable from the disk drives backside.

Thorsten

Just the guy I need! I'm newsletter editor for an 8-bit user group, The Ol' Hackers AUG. Next issue, I'm including an editorial that mentions the fact that our local guys don't get on the Internet with their 8-bits, but some of our national and international members do. In that editorial I'm asking the guys to write articles about their experiences using their 8-bits for Internet access. I explained that while I have the capability, and I've done it a few times, it's just easier for me to use my PC.

Even though the editorial hasn't been released yet, I decided to mention it to one of our surfing members. His response was, "Sorry, I use my Mega STe for that."

So, to your knowledge, in case I get stiffed on this all around, is there a definitive article about the subject -- one that ties all the pieces together and can be of use to guys with minimal 8-bit systems?

There IS alt.binaries.comp.atari8bit, to which I subscribe and seldom see anything that isn't off-topic and/or spam. Weeks can go by there without a single post.

There's also the possibility, as you mention, of saying something about a long file here with a link to an ftp or some other place, and I like that idea. I wouldn't know how to set a limit on the size of binaries posted here or attached to posts here.

BTW, seems to me, you guys have done a pretty good job of keeping spammers out of CSA8 by simply staying on topic and posting like crazy, all of which I appreciate.

I'd prefer that binaries be posted in alt.binaries.comp.atari8bit with
an announcement here.

To tell ya the truth, for me it was pretty much trial and
error. I wrote a small article for the folks on compuserve
before they took down the Atari sig. Also, I think I saw
something on Umich and Closertohome about surf'n with an
xl. Really, I was able to do it with an sx212, mio, kermit 65
(which I later found out will run fine at 4800 with Len Spencers
hyper-handler). The problem was the download speed, we're talk'n
something like 90 characters per/sec. (painfully slow). Along came
Itay with Ice-t and I thought I had it made because just about
everybody had zmodem available. Had a terrible time getting that
to work because zmodem requires hardware flow control, which
I was told didn't work on the mio. To make a long story short,
I stumbled across a deal on a 14.4 modem at wal-mart one day,
hooked it up and everything worked. Seems the hayes compatible
thing is a joke anymore. I've got 4 modems laying around here
and if you study the command strings, about the only thing
that's standard is atdt, atdp, ath, and atz. (dial, hangup
and reset). Anyway, now my average on downloads is around
1300 to 1400 characters per/sec. If you like, I can document
all this.....it's been a wild ride, but I love my 8bit.

best regards
Paul Clark

I don't think the question is what would you do with that speed, the question is can it be done. We've seen Zmodem on the 8bit, GIF viewers/printers, etc. Everytime someone said the 8bit potential was reached someone came along and changed that opinion.

>
> > "We must always try to push our technology to its limits"

The only way the Atari 8bit can get Internet access, is by calling up a dial up server and using Lynx! :) <grin> If someone can do what you say, I'm sure this base will be the first to know!

I have downloaded several attachments no problem from this base. I think the user has to specifically set the file as an attachment. I have seen some users that upload files directly into the message base (i.e. binaries) that are irretrievable at my end.

We have a 1meg message limit in e-mails. Large enough for any 8bit file (or collection of 8bit files!)

What I have used along these lines is useful to verify the machine operation - not so useful to diagnose problems. Particularly if the screen is dead or other major failure. On the XE machines, most everything is soldered in - very hard to swap components.

yep - the 30 pin SIMMs come in 256K, 1 meg, 4 meg and 16 meg configurations. Over here, they cost about $.25, $2.00, $18.00, and $100.00, respectively. They all have the same pinout, using the n/c pins as the size goes up. You can build an upgrade that uses any of the sizes listed rather easily - and you don't have to worry about refresh since the chips auto refresh themselves. The address counters are built into the IC. All you do is AND -CAS and -REF into pin 2. Works great.

I'll put all the particulars in Atari Classics, someday.

GCR recording? Looking at the IWM (Integrated Woz Machine) in the Apple
gives you a clue as to why nobody can read Apple disks. All the 'modern'
systems use the IBM standards as incorporated in the Western Digital
controller chips available at the time. This defined the track format
and data recovery techniques. Steve Wozniak did not have access to LSI
chips that did all the magic stuff for him, so he designed his own
little circuit using what is called a State Machine to do the floppy.
This was a monumental task at the time - Woz really did himself proud
with just a couple of chips! It looks at the data stream and flips the
write line according to what has been happening and what will be
happening on the head. Same for read - it just kind of runs backwards.
Nobody else did it that way, for sure! Turns out though, nobody else can
read it either......

looks like the best way to me is to use another processor to do the
serial stuff and stuff the data into Atari memory. 115,200 would be easy
since the AP does not need to do interrupts - which is the real problem
when you try to go fast on the main 6502. 115,200 data comes in about
every 90us. even a 1.79mhz 6502 can keep up with that.... no reason why
the floppy and IDE drive couldn't run that way also.

what I want to do is a motherboard running at 14.36 mhz that fits in a PC case. that would be major voodoo! our hardware is getting too old to continue using it just for potting around. we are wearing out keyboards, drives and joysticks that cannot be replaced. the Atari chips, on the other hand (ANTIC, GTIA, POKEY and 6520) will never "wear out". let's pull them out of the Atari container and use them in something a little easier to get.

well, we may have a project going here, i'm a little weak on the software side, but i could do up some addons for such a device, we'll probably have to go with 30pin SIMMs though, the 65816 is only a 16-bit chip, i might be able to assist in a port of LINUX ELKS to it though.
X11 on a 65xxxx atari, who'd have thought. Sounds cool to me.

I think--and I'm going back a ways so I may be wrong--that Paperclip might
have had a hardware dongle. On the Atari machines, it would have fit into
the joystick port. I cross-posted this so someone can verify it or laugh
in my face.

: > 130XE to ya if you do!
: what I want to do is a motherboard running at 14.36 mhz that fits in a
: PC case. that would be major voodoo! our hardware is getting too old to
: continue using it just for potting around. we are wearing out keyboards,
: drives and joysticks that cannot be replaced. the Atari chips, on the
: other hand (ANTIC, GTIA, POKEY and 6520) will never "wear out". let's
: pull them out of the Atari container and use them in something a little
: easier to get.

How about something with 50-pin slots (like the PBI bus) and add-on cards
like:
* IDE
* SCSI
* 80-column display
* serial/parallel
* DOS (I was thinking we could shove DOS on a PBI card + have it bank
select the second 1k of the 2k window for maximum usage)

+ a one SIMM slot (preferably 72-pin) for memory
+ a jumper/switch for 800 mode (w/4 joysticks) or XL mode (w/2 + the
standard memory bank switching stuff)

I'm still a little impaired on the hardware side, but I'd be willing
and able to write drivers for whatever is produced.

While we're at it, how about a BASIC XS (like BASIC XE but 16-bit)?

Am I cuckoo for cocoa puffs? :D

4459. Help getting the Xformer cable working

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-28 00:00:00 UTC
From: Paul Vatta <paulv@deakin.edu.auNOSPAM>
Message-ID: <34A5BB68.F5D1193B@deakin.edu.auNOSPAM>
Source record: 67645

I recently made up an Xformer cable for the PC using the information at
the website.
Being a complete novice to electronics projects, I have taken the pinout
info from the
Emulators Inc. website to mean 'the pins are numbered as they appear
looking at the
computers'. Is this correct?

After triple checking the final product, I still can't get it to work.

A few questions:

I have an AMD K6/200 with an Abit MB/Award BIOS. The BIOS has various
settings
for the printer port (EPP 1.7, ECP, etc). Should this be any in
particular?

I have an XF551 drive that I want to use with it. Does it have to be
set to a particular drive
number?

Any other tips/hints? (command line examples, etc)

Thanks in advance,
Paul

4460. Info needed for 800XL SuperMon upgrade

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-28 00:00:00 UTC
From: Paul Vatta <paulv@deakin.edu.auNOSPAM>
Message-ID: <34A5CFE0.1669FDBF@deakin.edu.auNOSPAM>
Source record: 67646

A friend of mine had this upgrade to their 600XL about 10 years ago and I remember that it
had features like:
- builtin in Translator
- Epson compatible driver
- debugger
- screen dump utility.

I recently picked up an 800XL with this upgrade + centronics plug for a printer. I can't remember
how to invoke any of the tools etc. Can anyone provide some information on this?

Thanks,
Paul

No face-laughing here... James is right. I have a complete PaperClip
package here with a joystick-port dongle. I believe all of Batteries
Included's programs used them. They were way ahead of their time in
not using copy protection on their disks. I wish other companies had come
to their senses sooner about that... then us old 8-bitters might be less
worried about preserving old disks and disk drives.

4462. Rumoured Garage full of Software

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-28 00:00:00 UTC
From: Brian@spheroid.demon.co.uk
Message-ID: <883301371snz@spheroid.demon.co.uk>
Source record: 67648
Cross-posted to: comp.sys.amstrad.8bit,comp.sys.sinclair,comp.sys.msx,comp.sys.atari.8bit

Please help!

About two months ago I was contacted by someone (late fifties/early sixties, at a guess) who claimed to have a garage stuffed with 8-bit format software which he had wound up with when he stopped being a software distributor to shops, and changed to supplying videos.

We spoke for about half an hour and I am sure this was not a wind-up. The guy was on the verge of retiring and was seriously considering what to do with all the (useful-one-day) stuff one accumulates at home during a self-employed career. I sypathised...

He was going to send me some preliminary lists of what he had to get rid of but nothing arrived and, like a prat, I hadn't taken his contact details. Stoopid, or what?

My only straw to clutch at is that *someone* referred him to me because of my magazine and the fact that it might be used to publicise the stash.

So, is that person reading this?

If so, please e-mail me if you still have contact details of the 8-bit hoarder. The address is (as it should appear) brian@spheroid.demon.co.uk

Thank you.

If you're just going to ridicule ideas and efforts at progress
on the Atari 8-bit platform, then why are you here? This
newsgroup is all about what we are doing with our systems right
now, and right now includes an exchange of ideas on how to
advance our 8-bit platform. If you don't agree, there's always
alt.billgates.fanboy or some such destination. At any
rate, you don't seem to want to contribute anything of use here.

Draco indicated awhile ago that he might be interested in
writing a TCP/IP handler for the Atari 8-bit. If and when this
happens, Lonny Pursell (of AtarIRC fame) wants to code an IRC
client in Action! for the A8 platform. Mail, FTP, and Yes,
perhaps a WWW browser could concievably follw, provided
that a programmer would come forward and code them. The main
stumbling block right now is in the lack of a TCP/IP
driver (Slip or PPP).

Why not combine all the chips into one? I read on rec.games.video.classic
that someone opened their NES clone, and the was only one chip inside.

4470. atari fair '98 schreiersgruen

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-28 00:00:00 UTC
From: highland@t-online.de
Message-ID: <6863iv$1fr$2@news00.btx.dtag.de>
Source record: 67656

From: schallt@fh-worms.de ()
Date: 23 Dec 1997 12:17:07 GMT

Hi to all,

98 will be the third Atari 8 Bit Fair in Schreiersgruen held.
Schreiersgruen is a little city in East-Germany near Zwickau.

The fair is held on the 21th of March 98. The place is the same as
every year (Wirtshaus Schreiersgruen). We had at the last 2 years
about 150 visitors and 20 trader. The people are very interested
in the Atari 8 Bit hard- and software.

At the fair will be the following people:

-RAF a regional group of the ABBUC.
They make the SIO2PC Interface, XFormer cable, 2-Computer Interface,
new power units for XL & 1050 and sell their do-it-yourself-kits.

-Highlander a Turbo Basic coder.
He has coded man utilities and nice little programms for many tasks.

-Charlie Chaplin a writer for german Atari 8 Bit mags.
He has a graet stock of new (old) games like Fight Night, Solar Star,
Dropezone, Antic Greatest... Also a great range of PD and Polensoft (
only one of many games).

-Me hardware fanatic
I will bring a little Atari 8 Bit chip libary to the fair, some soft
(Infocom Seastalker an others, EA Great American , SSI ...). 1050,
Floppy 2000, some Lynx and Jag stuff.

Possible but not sure:

-KE-Soft greatest Atari 8 Bit trader
He imports many prototypes and has the greatest Atari 8 Bit stock
in germany.

-Kaisersoft imports the most new Polen/Tzech software
When he is still alive, his last Top Mag issue has been out a half
year ago.

-People from the ABBUC
Technical References Manuals and PD at a great range.

-The Schreuers or other Atari 8 Bit fanatics from the netherlands,
Swiss, USA or West-German.

If you come from Germany and you are interested in further informations about the fair E-Mail me. Other should look for another text for the Fair in 98, there will be the phone number of Helmut Weidner. Helmut Weidner is the number one in the organsation of the fair.

greetings to all true Atari 8 Bit User

Termin Atari 8 Bit Messe Schreiersgruen

21.03.98

Die diesjaehrige Atari 8 Bit Messe 98 wird wieder in Schreiersgruen veranstaltet. Einige der Atari 8 Bit Haendler haben bereits ihr kommen angekuendigt, andere werden hiermit bei Interesse dazu aufgefordert.

Die Messe findet wie in jedem Jahr in einem 60qm grossen Raum in der Gaststaette in Schreiersgruen statt. Fuer die Besucher aus anderen Bundeslaendern gibt es ab der Autobahn Abfahrt eine Ausschilderung.

Wer bei der Messe einen Stand machen moechte kann sich bei Helmut Weidner erkundigen. !!!Die Telefon Nummer liefere ich noch nach!!!

In der englischen Version stehen bereits die Haendler die bereits zugesagt haben. Die Haendler unter "Possible but not sure:" haben noch kein Interesse bekundet.

Als Highlights gibt es wieder eine Verlosung, viele Raritaeten von Infocom und Co. (nah werdet Ihr Sammler nicht nervoes?). Auch gibt es Kleinigkeiten die man sonst nicht bekommt.

Gruss an alle wahren Atari 8 Bit Fans

>with posts?

Personally, I can't answer the question without knowing a little more about what the ALTERNATIVES are assumed to be. At one time, incorporation of UUencoded binaries into the bodies of Usenet posts was the _only_ -- or at least, the _standard_ -- way of making Atari 8-bit binaries available to the readership of this group! I myself didn't have FTP access for many years after that started to become the "standard," and I still don't have a whole LOT in the way of "current" (i.e. Web-browsing, etc.) technologies. Propose an alternative, THEN ask me whether I mind binaries appearing here.

(All else being equal, my initial reaction is that "no, I don't mind at all." Just as with pizza, I'd much rather have the binaries come to ME, than have to go out, myself, and PICK THEM UP.)

That's easy for YOU to say! ;-) _My_ ISP _doesn't carry_
alt.binaries.comp.atari8bit and turns a deaf ear to all requests for
changes to the status quo. I also lack the technology to "simply access a
different news server," if that was going to be your counterreaction.

Source record: 67660

> Hi everybody!

I've recently decided to upgrade memory on my 1200XL, and after finding
the mod needed I'm still stuck. In the mod's docs, I've found just names
of signals, but as I do not have any other HW docs or blueprints, I
don't know where some of the points are.

Where the address lines are, is clear enough, aswell as PBx lines, but
I really can't locate the following points:

MUX
RAx
-E
-Zd
-O1a
-O2b
> >
> > Any hints?
> >
> > Thanks,
> > Mike
> >

---
yeah, no wonder you can't find them. These are lines that the upgrade
uses internally, not 1200XL nets.
MUX is still pin 1 of the 158s, U10 in the 1200XL.
RAx are the four outputs of the 158, pins 4, 7, 9, and 12.
-E is a ground on pin 15 of the 158s. (?)
-Zd, -01a, and -02b are internal to the upgrade. you will not find them
in your 1200XL.

Be aware that this upgrade does not properly refresh memory on a
1200XL.... A0 and A7 on U7 are not used for refresh on a 64K machine,
but cannot be used as is on a 256K upgrade. The upgrade almost works OK,
but will fail every once in a while due to improper refresh. You have to
swap A15 and A7 for it to work well.

We would need a lot of quarters to do that.... If we could sell a
million or two, it would be cost effective. Boards aren't cheap, but
they are at least in our price range.

Were you ripped off by "Videogame Oasis", "Charles Sumner" or
his shill "Renee Forester Sumner", doing business out of Texas?

He has recently used these e-mail addresses:

rsumner@tnis.net
classics@penny-empire.com
webmaster@penny-empire.com

penny-empire.com appears to be a rented domain (shut off for non-payment). If
you have been scammed by anyone from this domain you should consider it
to be Charles or Renee Sumner.

This person may also be using an account out of U of El Paso, or using that
account to collect and send e-mail.

I have filed a complaint by registered mail w/ the united states post office
regarding both these individuals. If you have been ripped off please
let me know, the more people that file complaints, the more likely it is that
the matter will get attention.

Thanks

Steve

You wasted your money using registered mail to the Post Office. What
you want to do is the postal Inspectors office in most major cities.
they will send you a form (maybe, it took 2 tries for me to get one).
Then you fill out the form along with supporting documentation, send
it in and grow old.

In my case, I sent in stuff about CAROLYN NICHOLS aka JEFFERY CATES
last spring. Low and behold the sent me a notice in late November that
they had received my form!

So the bad guys will probably die of old age before the feds catch up
with them. Oh well.

So whatever happened to:

>
>Send all $ to

>Adam Harvey
>19012 Pawnee Ave
>Cleveland Ohio 44119

aka RudyPike@Aol.com

All other burnees please send me your story and we'll get the feds another letter to clutter up their desk with.

Besides, I recall having read here on comp.sys.atari.8bit that the
designs for the custom chips in the 8-bits were lost when Atari
scrapped their VAX.

You know it is really upsetting to hear about these things (this is the
2nd one I have read in the past couple of days). I like to beleive that
people have some shred of decency and honesty which I know is naive in
today's society. For the record I have sold and bought Atari 8bit
material via this message base, at least 10 transactions, and never had a
problem. (Actually a couple people have said they would buy something but
never sent the money, which I guess really isnt that bad.. I haven't lost
anything, but I really sympathize for people who get taken for a ride.)

I hope you manage to get your money back or the product. Good luck

I always thought that would be cool: a 1 chip Atari 8-bit machine (Antic, GTIA, Pokey, CPU, memory, etc). Just a little tiny cube with some ports on it :-)

I believe long binaries posted here will automatically be detected and cancelled by Usenet-wide cancel-bots.

Short postings shouldn't be a problem, though the percent of the readership here that will be able to see and download a binaries may be smaller than you think.

As mentioned, news:alt.binaries.comp.atari8bit is out there, but not widely available.

There's also news:alt.binaries.atari (for the binaries) and news:alt.binaries.atari.d (for text about them) which are more widely available, but still not as available as comp.sys.atari.8bit.

If you want something available long term, it's still best to upload to UMich or e-mail to Bill at mailto:kendrick@zippy.sonoma.edu

Actually, I can easily sympathize with your plight. My ISP is also
deficient in many respects and I live in a rural area with not a lot
of choice.

I really don't have an objection to posting binaries here, though it
would be nice if they were clearly identified as large files.

JTS Reports Third Quarter Loss, Drops
3-Inch Portable Drives

By Joseph F. Kovar
San Jose, Calif.
9:45 p.m. EST Mon., Dec. 22, 1997
....

JTS Corporation today reported net loss of $60.6 million
or $0.39 per share on
revenues of $24.0 million for the fiscal third quarter
ended November 2, 1997.

This compares to a net loss of $58.4 million, or 49 per
fully diluted share, on net
revenues of $28.4 million for the second fiscal quarter
ended August 3, 1997.

The results include a one time charge of $38.0 million
associated with the San
Jose, Calif. based company's decision to exit the 3-inch
portable hard drive
business.

Joseph Prezioso, executive vice president of the firms
Finance Administration
and company CFO, called the $38.0 million a one-time
restructuring charge
associated with suspending support for 3-inch portable
drives.

According to Prezioso, JTS decided to give up on the
3-inch portable drive
form factor because "market acceptance was not what we
would have
expected." He noted the company's limited financial
resources were unable to
support the product line.

JTS is not the first to exit the 3-inch portable drive
market. Western Digital
Corp., located in Irvine, Calif., announced on December 2
that it would exit this
market.

Recent efforts to restructure JTS have lead to reducing
the break-even from
750,000 units per quarter to about 350,000 units per
quarter, according to
company officials. Employment at the firm has fallen from
a high of 8,400
worldwide to the current 5,800 persons.

JTS was founded three years ago on support of the 3-inch
portable hard disk
drive product line, Prezioso said. The firm has
manufacturing facilities in India.

According to Prezioso, the Asian economic turmoil has
actually helped JTS.
"The rupee has devalued by 10 percent, which helps our
costs," he said. He
noted the firm purchases components in US dollars, and so
has not suffered
from the problems faced by manufacturers that relay on
local currencies for
imports.

Prezioso said JTS is currently working on two new
projects. It hopes to
introduce drives with 2.1 GBytes per platter using MG
(metal and gap) heads
by the end of January. "We hope to get one more generation
out of this
technology because of its low cost," he said.

By summer, the firm also hopes to introduce 2.1 GBytes per
platter drives using
MR heads. It will feature four platters per drive instead
of the normal three,
Prezioso said.

In a book I read a few years ago I remember something about ftp sites supporting file requests via email. Is this true, and does anyone know how to use it?

P.S. I will look for the book.

We have an OCR in the office and over the past week I've
scanned in Chapters 6, 7, 8, 9, and 10. So, now I have
basically all the numbered Sections before the Appendices
in a computer somewhere. At the moment I'm proofreading,
correcting and adding ASCII simulations of the
illustrations where relavent.

I heard something somewhere that Activision is trying to
buy what's left of Atari ftom JTS. Reportedly, Jack
"The Rippper" Tramiel is involved in this which suggests
to me that nothing will come of it, because he'll
probably insist that the intellectual property and
copyrights are worth about $10 billion.

Al,
Thanx for your response. I'd say attachments, if allowed, should be no
larger than 90K since that is the max size for an Atari SSSD disk.
Anything larger should be e-mailed directly or posted to an FTP site.
I'd also say keep that to a minimum, like only if it would benefit more
than one person and is strictly NON copyrighted commercial files (stuff
that can be freely distributed without any question!). This would be
stuff that probably isn't easily found at large too.
Those are my thoughts on the subject.

Ok, while we're at it, why don't we make some improvements like....

An extended Hi-Res mode, say 640x400/480, would make
80col tolerable

RS-232 16550a serial and Parallel as well as SIO ports

IDE hard drive/CD-ROM support

it's gonna need a new OS, so code an Atari compatible
OS into ROM, but allow extensibility to allow machines
based on the board to evolve beyond being a hi-pro
Atari compatible.

Jeff, please find a life.

The days of Ralph Mariano type Atari bashing died a long time ago. Nobody gives a damn about Atari any longer. They are dead. RIP.

Just let it go. Leave the bashing and trashing to the fools like Mariano and his cronies.

4513. DGS Into 1998

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-31 00:00:00 UTC

In 1998, we celebrate 10 years of supporting the Atari 8-bit. During this time, the Atari has gone from a much used machine to a specialist hobbyist machine. Despite the fact that the number of users has dropped to almost none (relatively speaking!), we still intend to continue supporting the Atari with our range of PD and commercial software. We have visitors to our web site every day, and well over 1000 catalogues have been downloaded from the site. We still receive relatively few orders, but we now look at it as providing a service rather than making money. I grew up with the Atari, and can still remember the excitement at owning and using such a great little machine. Just last week, a couple of nights before Christmas, I hooked up a 130XE to our main family TV set and we played Trivial Pursuit well into the small hours. Although the computer was made in 1985, and the game produced in 1986, we were still able to gain much pleasure from them in 1997. I have several powerful PCs in the house which I use for work, but I doubt any of those would have been able to provide such entertainment.

I look forward to being of continuing service to the Atari 8-bit community in 1998. Maybe some of you may even place an order with us! If you haven't yet visited our web site, please do so now at: http://www.dgs.clara.net

4514. Audio Emulation

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-31 00:00:00 UTC

I'm busy proofreading Section 7 of De Re Atari on the computer and I've figured out why the emulators have had so much trouble doing sound.

POKEY had three poly registers, does variable clocking on audio channels, can link channels together for 16-bit frequencies. Jeez. No wonder the best emulation for POKEY on a PC is a POKEY chip on a card.

whatfor we need a new OS? we can do all that stuff (have done all that stuff) using the existing structure. You have to write a driver, but not an OS.... These kind of bolt-ons are why we need to keep the existing chip set (or why we don't necessarily want to spend the time to integrate them into a VLSI package). But, if we built a board along the lines of a PC, we can add whatever video, audio or I/O enhancements we desire and still have backward compatibility.

(getting down off soapbox...)

Bob

and, while it was at it, POKEY digitized eight pots and scanned the
keyboard matrix.... even still, a nice digitizer would be nice. A/D and
D/A.

I use the MENU.ATR for Xlit... if you boot it as drive 1 and put an .ATR
image that has games on it you can boot them up with a single keypress.
the menu.atr file and MegaImages full of 8bit games can be found on Yogi's
jellystone site.. (which I dont have handy sorry..)

Heheh.. we are not talking nickels and dimes here... buy Atari?

Sorry pal, I don't have several hundred thousand US dollars lying around..
besides, JTS has been losing money every quarter.. an unwise
investment...

Out of all the 8bit emulators I have used, XLIT emulates sounds the best..
(and I dont have a POKEY upgrade on my PC) The sounds/music sounds almost
just like the 8bit...

4520. New Magazine needs submissions

Newsgroup: comp.sys.atari.8bit
Date: 1997-12-31 00:00:00 UTC
From: Vintage_Micro@yahoo.com
Message-ID: <68eb34$15l@sjx-ixn2.ix.netcom.com>

Hi Everyone,

This is my second Magazine update. We are about to go into another year. It is amazing that many of us still band together, supporting our machines. This is a great thing. I hope the trend continues in 1998. Heck... I hope I can remember to write the correct year on my checkbook! :)

Feedback for this project seems to be fantastic. Especially from groups and schools who still use older systems. Unfortunately I am not receiving alot of submissions for articles. The few that I have received are fantastic. But I need more! I am also still in need of a title for the magazine. After all, this magazine is for you! So Please send in your submissions.

Here is a copy of my first post:

Currently, I am working on a little magazine for older computers(mostly commodore and atari but all others are welcome to) to help support users out there. There seems to be alot of support for older systems just not in one place. I want to do features and listings on web-sites, companies, individuals who support these older machines. I would like to have articles on hardware upgrades and modifications for these machines along with new and innovative software. I will also provide very low cost advertising for those who wish to sell their hardware/software new or used. I think I can publish it quarterly with no problems. The format will be simple and cost effective for me to produce, 8.5in by 11in pages folded in half(booklet form), and will hopefully have at least 16 pages. I have not figured out a price for this yet but more than likeley about $1 will pay for the printing and the postage. I will be taking submissions for articles right now. They can pretty much consist of anything(reviews, opinions, programming, hardware modifications, and most importantly getting these machines online.) All submissions will get proper credit! Also I am in need of a name for this mag, so please send in your ideas!
Please send all submissions to: Vintag_Micro@yahoo.com

I hope something like this would be of interest to others.

Thank You,

Jon

I was not suggesting the purchase of JTS (Jack Tramiel Systems???); just its Atari subsidiary. Since JTS is hemorrhaging money, maybe they'll consider selling Atari in order to scrounge up some funds?

Then again, maybe we shouldn't get into a bidding war with Activision...

Well, you see, Atari was the one that brought money to the deal. JTS
needed the $50 million that Atari had in the bank, and Atari needed a
viable product, so the Atari stockholders bought a controlling interest
in JTS.

Actually, he wanted to buy the Atari properties, not the whole of JTS...
Of course, Atari may be the only profitable part of JTS, so they might
not want to sell :)
